

# China Telecom's View on Automotive Connected Service and Capabilities

**Trend and Opportunities**

**Positioning and Capabilities**

**Practice and Prospects**

## Technology

- **Mobile clouding service**
- **Mobile phone integrated portal**
- **HMI**

## Service

- **TSP is just beginning**
- **LBS**
- **Integrating Offline Resource Service**

## Market

- **Monopoly of foreign technology**
- **Access mechanism**
- **Aftermarket will be developed more rapidly.**

## Opportunities of Telecom Operators in Industrial Chain

In the market of factory installation, the automotive factories must respond to the demands of car owners, so they naturally become the integrator of the whole industrial chain to lead the development of industrial chain currently.

**Operator currently stays in an indispensable but passive position of the industrial chain.**

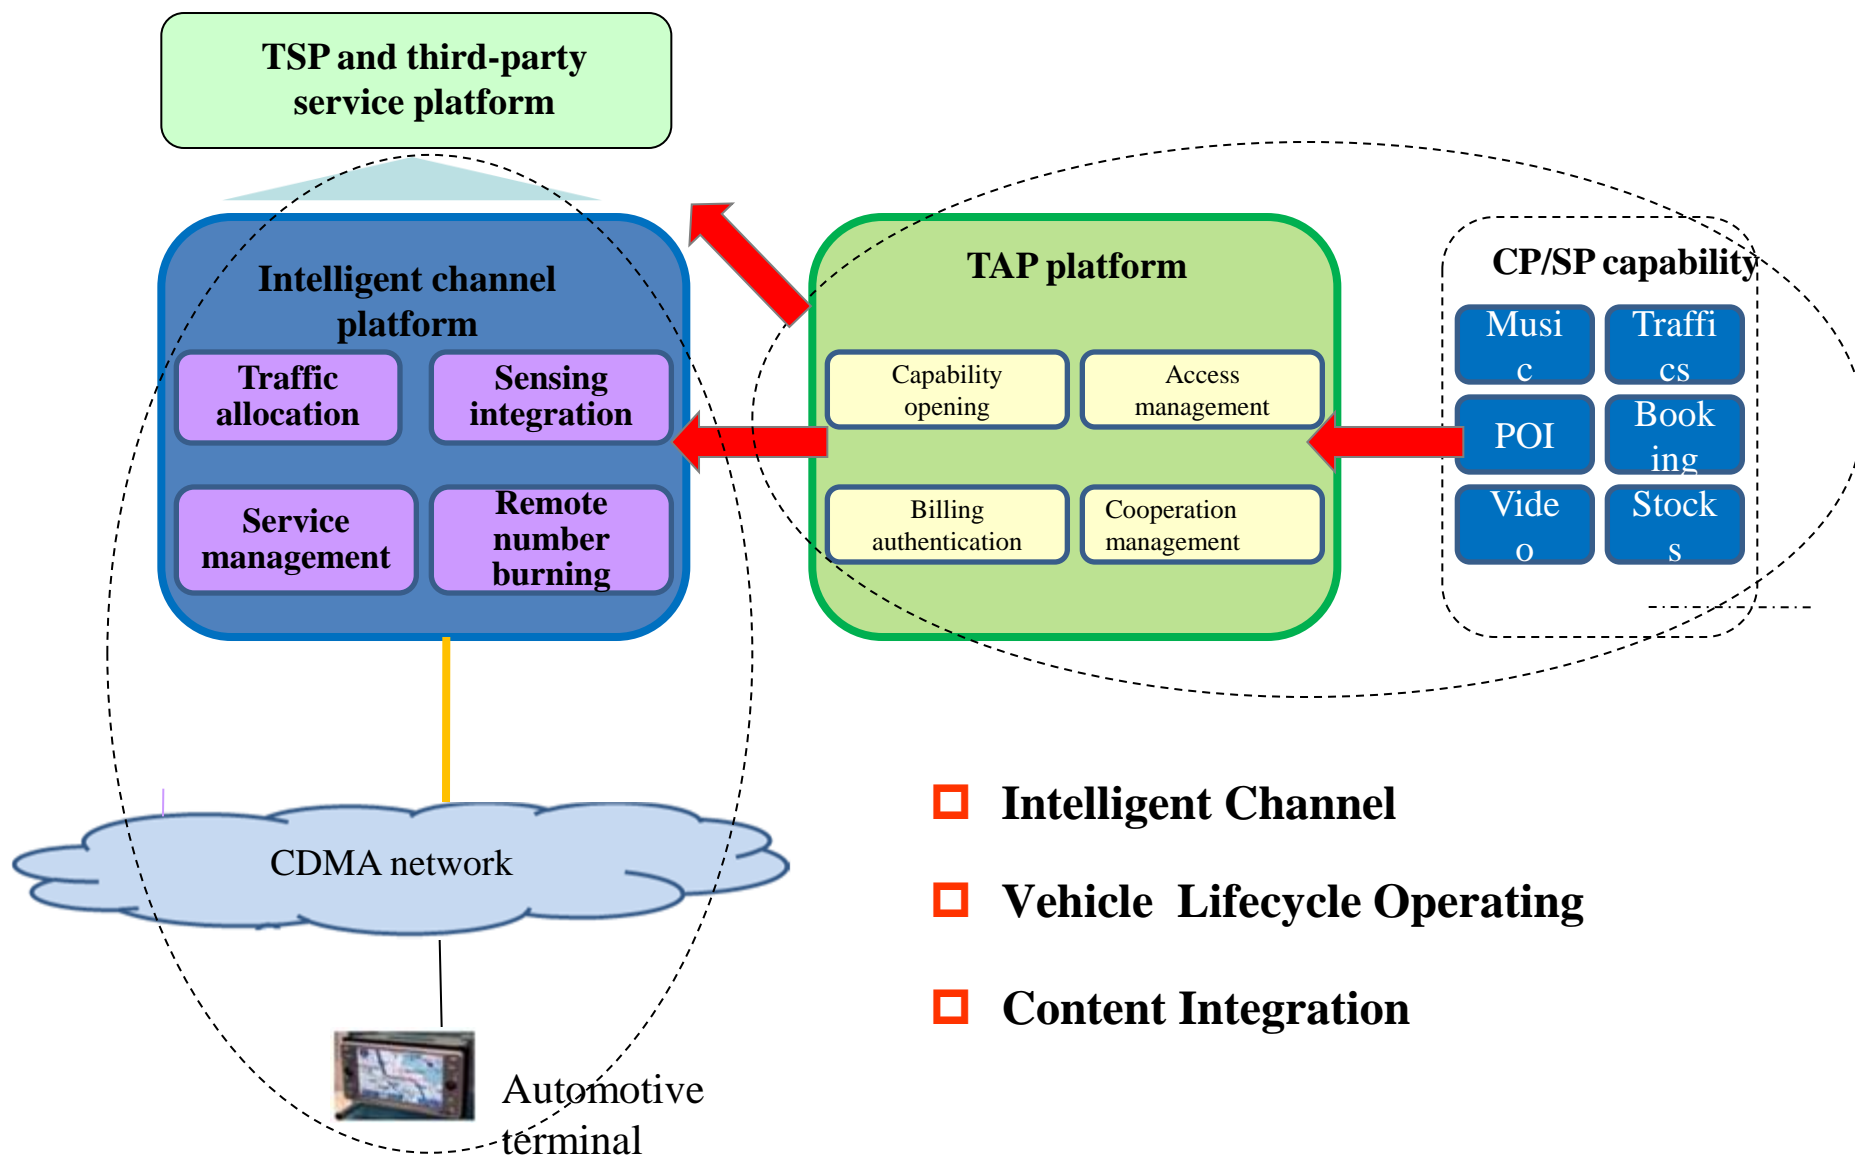

**Trend and Opportunities**

**Positioning and Capabilities**

**Practice and Prospects**

## Positioning of China Telecom's Telematics Industry

- ❑ **Intelligent Channel**
- ❑ **Vehicle Lifecycle Operating**
- ❑ **Content Integration**

- **APN Classification**
  - **Segmentation**
  - **Activation/Inactivation**
- **Content Charging**
  - **Identify and control the traffic by url, IP address, and port)**

Telematics service		Transmission content	Recommended transmission means	Recommended channel
Security	Accident emergency assistance	Vehicle location, accident alarm	DOV	APN1
	Failure assistance	Vehicle condition and location	DOV	
	Anti-theft tracking	Vehicle location and control	CDMA 1X/EVDO	
	Simple vehicle diagnosis	Vehicle condition information	DOV CDMA 1X/EVDO	
	Vehicle status monitoring(such as new-energy automobiles)	Regularly obtaining vehicle data information	CDMA 1X/EVDO	
	Vehicle control	Vehicle control information	DOV、SMS	APN2
Convenience	Artificial navigation	Destination location	Voice, SMS	APN3
	Real-time traffics	Real-time traffic data	CDMA 1X/EVDO	
	Map update	Map and POI data	EVDO	
Entertainment	News/Weather/Stocks	Information data	EVDO	APN3
	Online music/video	Streaming media data	EVDO	
	WIFI service	Information data	EVDO	APN4

# Vehicle Lifecycle Operating

## Traditional code number and UIM card management

### UIM card life cycle management

- The UIM card data of common mobile phones only includes three statuses of inactive, active and disassembled in HLR, which can't be reused after disassembled.

### Charging

- For the current UIM card management means, the charging will be started from service enabling to disabling.

## Telematics business requirements

- The life cycle of in-vehicle UIM card is very complicated, including production, test, sales, using, disabling, transferring, scrapping, etc.
- The business test/demo of in-vehicle UIM card before sold(in automotive factory/4S store) should be free

## Key Features

### OTA

- Sending SMS in a specified format from personnel of automotive factory/4S store

### Number life cycle management

- Processes of production, test, sales, using, disabling, transferring, scrapping, etc.

# Content Integration

□ TAP platform ,Integrates the CT's and external resource.

□ Reducing the costs and complexity of TSP

## Vehicle business agency

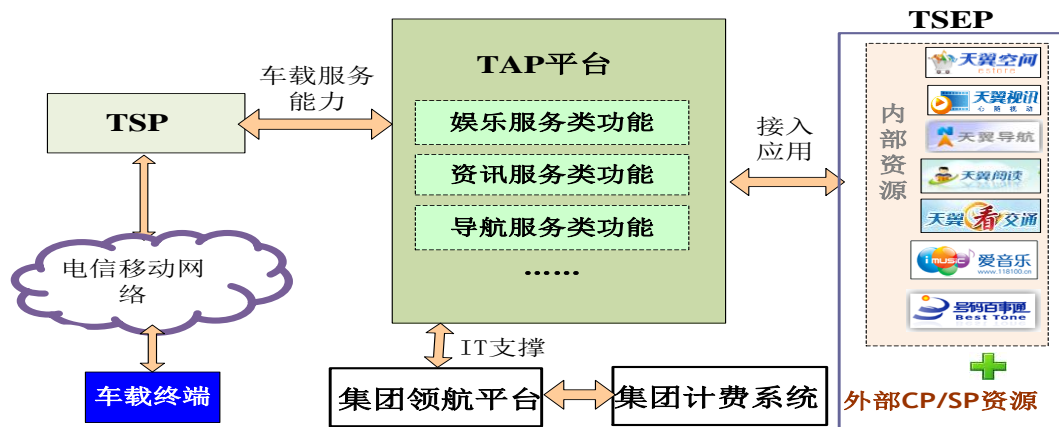

Maintenance

## Auto offline service

## Customized service of images, texts, audios and videos

## Traffic Live Video Monitoring

**Trend and Opportunities**

**Positioning and Capabilities**

**Practice and Prospects**

■ On August 8<sup>th</sup>, 2012, President Wang Xiaochu of the Group Company and Hanzheng, Mayor of Shanghai City, together with the president of group company Wang Xiaochu launched the “Shanghai Base for China Telecom’s Telematics”.

■ 8 industrial application bases for service within the whole network are built, and Shanghai and Nanjing become the first bases for transportation industry.

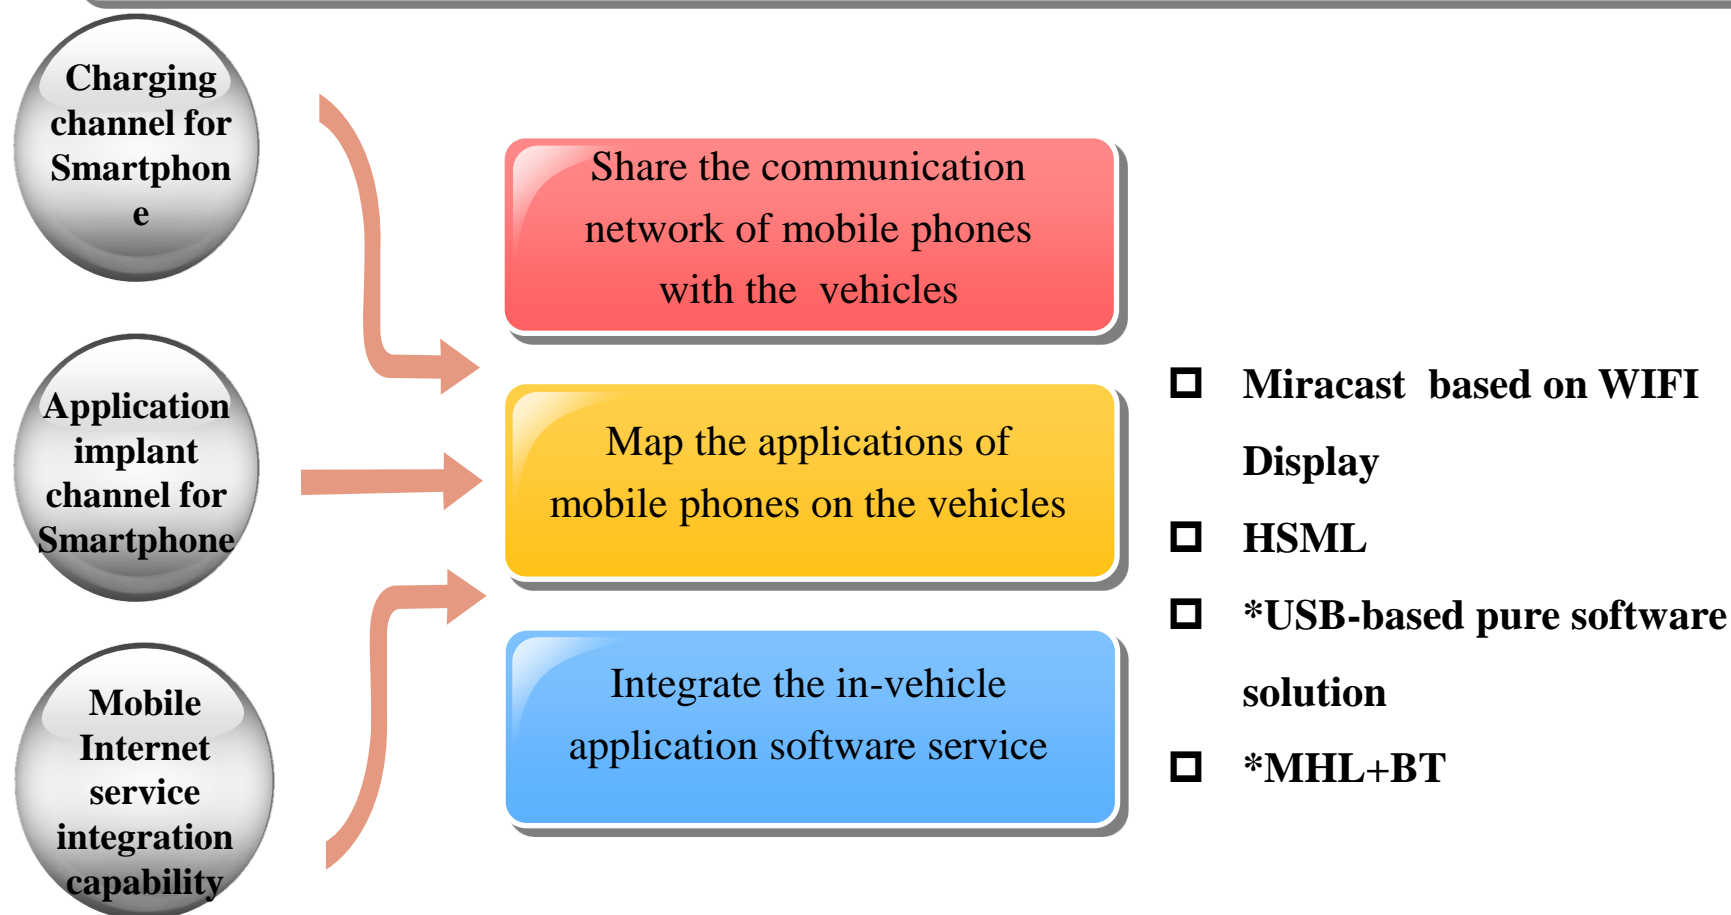

■ IT industrial management genes are introduced to gradually improve the company operation system for the bases.

	Before market	After market
Shanghai	GM, Saicmaxus	
Beijing	Benz, Hyundai, Toyota	
Hubei	HawTai Motor	Navigation, information entertainment, safety and vehicle diagnosis service.
Shenzhen	BYD	Navigation, safety/security, information service.
Jiangsu	Chang'an Mazda	Navigation, information
Jilin	FAW	
Anhui	JAC Motors	
Shandong		Navigation, information
Fujian	Soueast-Motor	Voice identification, navigation, real-time traffics, safety diagnosis

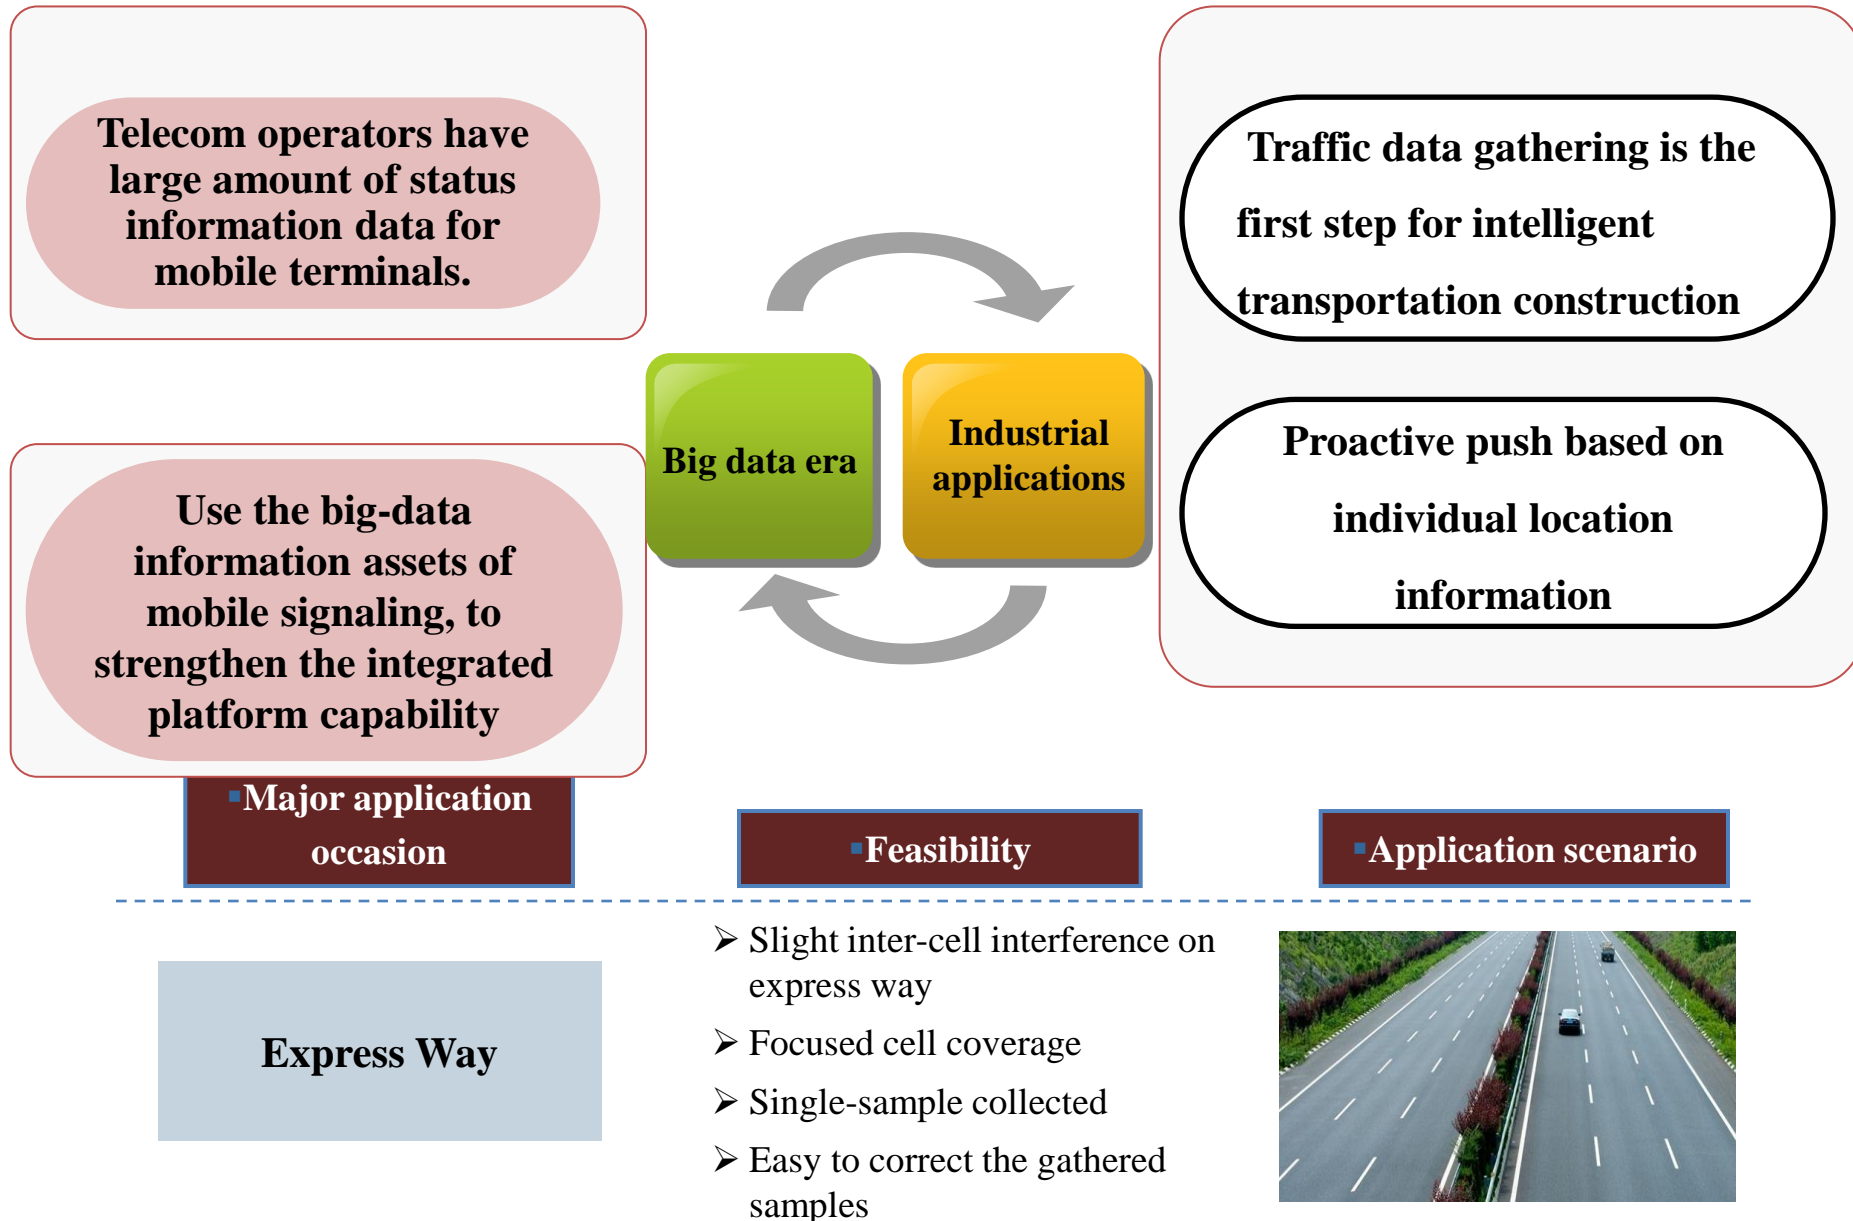

China Telecom has operated more than 80% of the total Telematics service users of domestic automotive factories.

Trend 1 : In-vehicle and handy terminal are the major Telematics service forms in the future.

• Establish interactive bridge between mobile phones and vehicles by using Telecom operator's charging channel, application impact channel and service integration capability for Smartphone.

## Trend 2: Mobile signaling based big data applications have bright future.

# Thanks
