

Orange Mobile IoT activities

GSMA Mobile IoT Summit - 26th February 2017

Ronan LE BRAS

Head of Technical Strategy Wireless
Networks

Orange Labs & Networks

Chair of EC-GSM-IoT Group

1

- **IoT in Orange Essential 2020**

2

- Update on EC-GSM-IoT

3

- Orange LTE-M activities at MWC2017

4

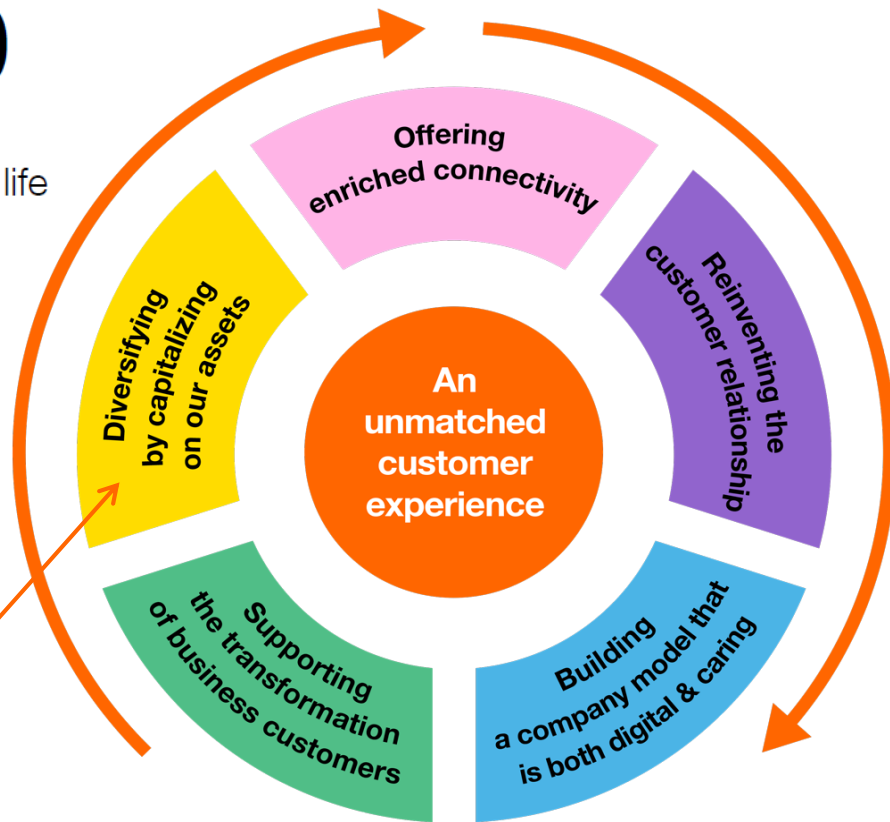

- Mobile IoT activities and next steps on LTE-M

Essentials2020

Always in touch to connect what's essential in your life

**our strategic ambition
centered on
Customer Experience
translated into
5 Group-level action levers**

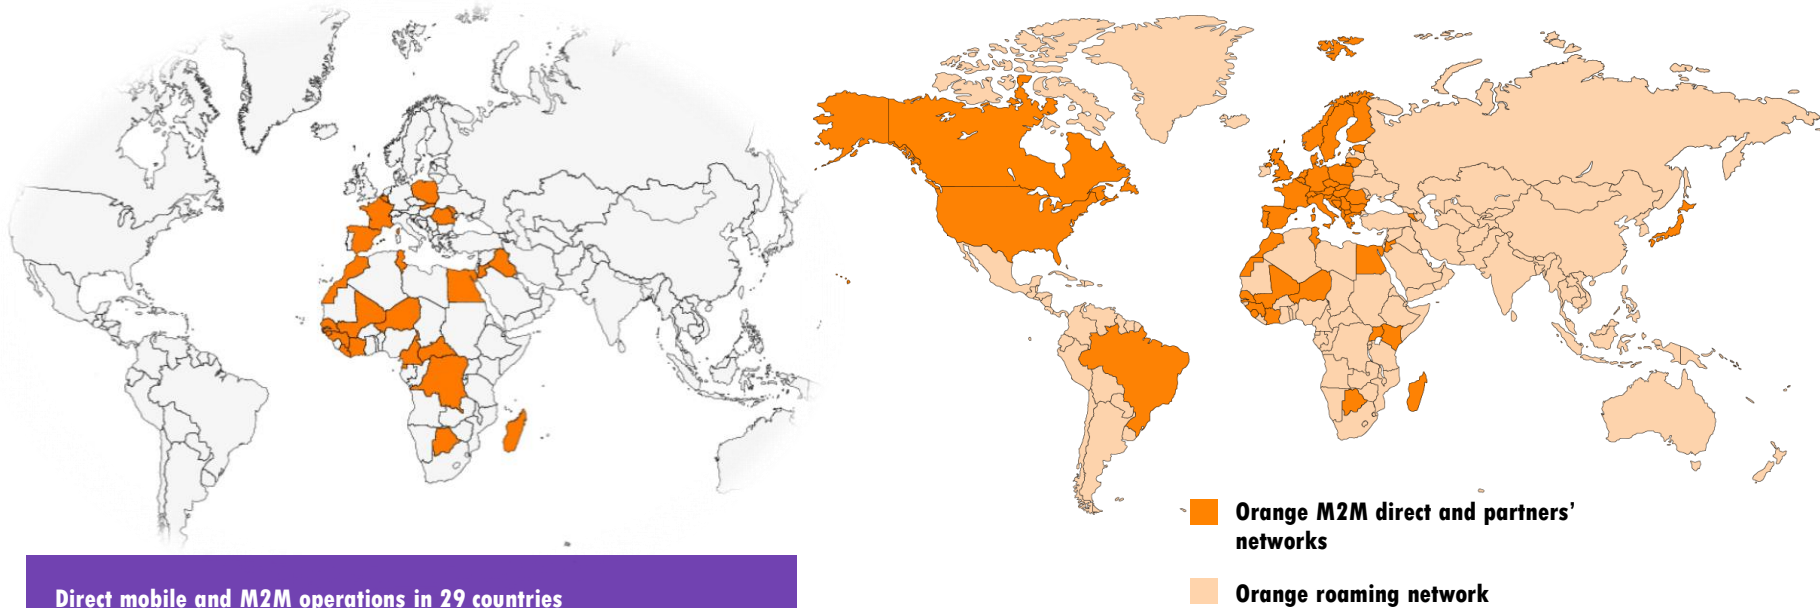

IoT / M2M identified as one of the
two areas of diversification in
Essential 2020

**A digital, efficient
and responsible company**

Orange Global presence in M2M

Orange mobile networks + M2M partner networks + roaming partners

Direct mobile and M2M operations in 29 countries

Extended by GMA in 33 additional countries with M2M specific offers

Completed by the largest roaming network worldwide covering more than 200 countries / 500 operators

IoT journey

some specifics must be taken into account

IoT is about **verticals**

main value will come from

generated data :

=> ecosystem, data analytics & privacy

part of the market will develop
through **b2b2c** offers => wholesale

IoT connectivity requirements are extremely diverse

LPWA (new), actual M2M and high data M2M (new)

connected cars (infotainment)

wifi on board
video monitoring

External powering,
Mbps throughput,
Low latency,
High mobility

4G+

NEW

health (patient monitoring)

security

payment

connected cars (excepted infotainment)

gateway for smart metering

wearables

sensitive device tracking

Rechargeable battery,
Kbps throughput,
Real time transaction

2G /3G/ 4G

smart building

smart agriculture (with extended coverage)

sensors, smart meters, smart cities

insensitive devices tracking,

smart home, e-health (wellness)

smart plant

Low power,
Low cost
Long range

Mobile IoT

LTE-M
NB-IoT
EC-GSM-IoT

LPWA

NEW

Multiple connectivity solutions are needed to fully address all the verticals

1

- IoT in Orange Essential 2020

2

- **Update on EC-GSM-IoT**

3

- Orange LTE-M activities at MWC2017

4

- Mobile IoT activities and next steps on LTE-M

EC-GSM-IoT rationale

- ✓ Standardised technology by 3GPP
-  Reduced deployment cost and fast roll out by upgrades on 2G GSM
-  Worldwide available spectrum
- € Low cost modules (Target ~ 5\$)
-  Enhanced coverage with +20 dB over GPRS
-  Low power consumption with PSM (Up to 10 years)

Orange & partners' activities

- Lab trial completed in Q4 2016 with prototype module from Sierra Wireless and BTS from Nokia showing Targeted Gain +20 dB in Uplink
- Pilot planned to start in Q1 2017 in rural areas in central Europe to:
 - validate the performance of EC-GSM-IoT
 - assess them in a real use case of smart agriculture targeting emerging markets

EC-GSM-IoT Demo @ MWC

- Demonstration at GSMA Innovation City of Groundtruth Weather station for Smart Agriculture with Sierra Wireless and Nokia
- Target markets for the use case are India then sub-Saharan Africa & Latin America

1

- IoT in Orange Essential 2020

2

- Update on EC-GSM-IoT

3

- **Orange LTE-M activities at MWC2017**

4

- Mobile IoT activities and next steps on LTE-M

Orange view LTE-M as the most versatile Mobile IoT solution to address new IoT (LPWA) and existing M2M use cases

LTE-M LPWA features

Low power

Up to 10 years (1msg/day)

Long Range

Deep indoor coverage

Low cost

Target cost module ~ 5\$

LTE-M key features

Bidirectional

Uplink & Downlink

Throughputs

Up 1 Mbps (Full duplex)

Up to 350 Half Duplex

Low latency

Down to 200ms

Roaming

Roaming worldwide

Mobility

Handover in connected mode

Fast mobility (Up to 300 Km/h)

4G LTE Coverage

Fast Network upgrade by Software

4G

Secure

SIM-based authentication
and encryption

Voice

VoLTE support

LTE-M target use cases

Orange LTE-M @MWC2017

LTE-M technology

Get a head start on LTE-M
with Orange

- Pilots showcase on Orange booth
- First LTE-M IoT Open Labs in Europe
- Next steps for LTE-M ecosystem development

LTE-M demos and pilots

1. Smart metering

LTE-M connectivity enables to

- Monitor in real time the power consumption
- Change remotely the power level
- Switch Off/On the counter
- Adapt the user subscription dynamically

2. Smart wearable prototype

Prototype Object

LTE-M connectivity enables to

- Display in real time its position
- Monitor in real time its temperature
- Control its LED remotely

Orange LTE-M Open IoT Lab

Why?

- Bring your device to test and develop your IoT product and service with to LTE-M

For who?

- IoT device makers and service makers
- Startup and international companies

Where?

- Orange Gardens, Chatillon near Paris (France)

Benefits

- LTE-M network coverage
- Starter kit LTE-M for faster prototyping
- Tools for test in extension of coverage
- Battery and power optimisation
- Orange experts support

Available Starter kit LTE-M

Mobile IoT Activities at Orange

Next steps on LTE-M ecosystem development with Orange

- **Orange** planning several pilots on LTE-M in Q2-Q3 2017 in European affiliates including:
 - Smart Metering
 - Wearables (Phase 2)
- **Orange** adapting its chipset and module certification programme to include LTE-M
- **Orange** working on the end to end integration of LTE-M from SIM to IoT Platforms

Several opportunities for module, object makers and IoT Service providers to join these pilots and the **Orange** LTE-M Open IoT Labs

- **Orange** working with supporting operators and industry players in GSMA LTE-M task force on several topics:
 - Technology awareness and dissemination
 - White papers / webinars
 - Roaming aspects:
 - Multi-band Modules for Global Roaming
 - Adaptation of Roaming model for IoT
 - Use of e-SIM as enabler for faster adoption

Multi-operators initiative to take place during MWC2017 to stimulate and accelerate the development of a worldwide ecosystem of LTE-M modules and objects

thank you
