Table of Contents

1 Introduction

1.1 Overview

The GSMA operates Security Accreditation Schemes (SAS) for a number of sensitive processes (SPs). To fulfil the requirements of the relevant Security Accreditation Schemes, participants are required to follow the corresponding Standard, including achieving compliance with the relevant security requirements.

To ensure common standards across the schemes the GSMA publishes this Consolidated Security Requirements (CSR) document. The document sets out statements of requirement that are relevant to SAS participants.

These requirements are, in turn, supported by the Consolidated Security Guidelines (CSG) document [5] which provides practical guidance to SAS participants to help them design, implement and operate security controls that meet the CSR.

1.2 Using this document

This document is intended to provide requirements for all SPs within the scope of the different SAS schemes. Many of the requirements are common across all schemes, however some requirements are specific to individual SPs. The SPs for which each requirement applies are indicated in this document as described in 2.2.

The SAS Standard document relevant to each participant's activities and certification will clearly define which of the SPs are, or may, be applicable.

SAS participants are responsible for ensuring that they have determined which of the SPs and requirements are relevant to them. In the event of any query, participants should contact sas@gsma.com.

1.3 Intended audience

- Security professionals and others within organisations seeking to obtain or maintain accreditation under the GSM Association Security Accreditation Scheme
- Security professionals and others within organisations seeking to procure products or services within the scope of the GSM Association Security Accreditation Scheme
- SAS Certification Body members
- SAS auditors

1.4 Related documents

This document is part of the Security Accreditation Scheme documentation published by the GSMA. Documentation is structured as follows:
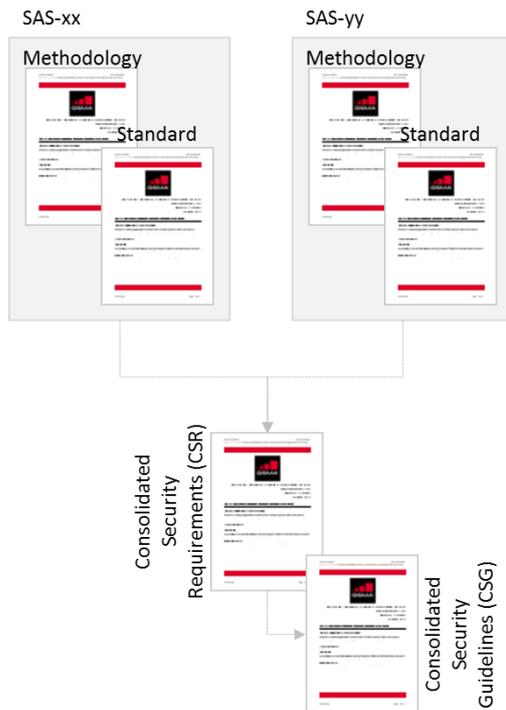

Each SAS scheme comprises a **Methodology** and **Standard** relevant to Sensitive Processes (SPs) that should be protected**.**

The **Methodology** describes the purpose of the scheme and how it is administered.

The **Standard** describes the security objectives related to the relevant SPs.

The **Consolidated Security Requirements (CSR)** describe all of the security requirements that may apply to SPs in the different SAS schemes.

The **Consolidated Security Guidelines (CSG)** provide examples of how the security requirements may be achieved.

Figure 1 - SAS Documentation Structure

The accreditation schemes and documents are designed such that multiple schemes will utilise the same Consolidated Requirements and Guidelines.

References to the Standard and Methodology documents for each SAS scheme using the Consolidated Requirements and Guidelines can be found in section 1.7.

1.5   Definitions

Term	Description
Actor	Person who is involved in, or can affect, the Sensitive Process
Business Continuity	Capability of the operator of a SP to continue to operate the SP at predefined levels (as determined by customer requirements) following a failure incident.
Duplicate	Two or more assets of the same nature showing a set of information that should be individual according to the correct process
Employee	An individual who works part-time or full-time under a contract of employment, whether oral or written, express or implied, and has recognized rights and duties. Also called worker.
Environment	Environment of use of the sensitive process limited to the security aspects
eUICC	A UICC which is not easily accessible or replaceable, is not intended to be removed or replaced in a device, and enables the secure changing of profiles. The term originates from "embedded UICC".
eUICC Management	A set of functions related to the registration of an eUICC to a SM-SR and the change of SM-SR for an eUICC.
High Security	An area accessible only to authorised personnel in which sensitive assets are

Term	Description
Area	stored or processed. Appropriate physical protection and access controls will normally be deployed to protect the HSA.
Key	Any logical key (e.g. cryptographic key or certificate)
Physical key	Any key and/or combination used for opening a physical lock (e.g. a door, vault, safe or secure cabinet)
Platform Management	A set of functions related to the transport, enabling, disabling and deletion of a Profile on an eUICC.
Profile	Combination of a file structure, data and applications to be provisioned onto, or present on, an eUICC and which allows, when enabled, the access to a specific mobile network infrastructure.
Profile Management	A set of functions related to the downloading, installation and content update of a Profile in a dedicated eUICC.
Reject	Finished or partially finished product containing sensitive information which has been ejected from the process.
Restricted area	An area, which may or not be a sub-area of an HSA, in which physical access is limited and enforced by access control devices where sensitive systems or components of the SP are installed.
Sensitive Process	The security evaluation field, covering the processes and the assets within those processes. For the purposes of SAS, SPs can include activities related to UICC production, subscription management and certificate management.
Universal Integrated Circuit Card	A smart card that conform to the specification written and maintained by the ETSI Smart Card Platform.

1.6 Abbreviations

Term	Description
CA	Certificate Authority
CSR	Consolidated Security Requirements
CSG	Consolidated Security Guidelines
eUICC	Embedded UICC (as defined above)
EUM	eUICC Manufacturer
FIPS	Federal Information Processing Standard
FS.nn	Prefix identifier for official documents belonging to GSMA Fraud and Security Group
GSMA	GSM Association
HSM	Hardware Security Module
IT	Information Technology
MNO	Mobile Network Operator
PKI	Public Key Infrastructure
SAS	Security Accreditation Scheme
SAS-SM	Security Accreditation Scheme for Subscription Management Roles
SAS-UP	Security Accreditation Scheme for UICC Production

Term	Description
SGP.nn	Prefix identifier for official documents belonging to GSMA SIM Group
SM-DP	Subscription Manager – Data Preparation
SM-DP+	Subscription Manager – Data Preparation (Enhanced compared to the SM-DP in SGP.02 [7])
SM-DS	Subscription Manager – Discovery Service
SM-SR	Subscription Manager – Secure Routing
SP	Sensitive Process
UICC	Universal Integrated Circuit Card (e.g. a SIM card)

1.8   Conventions

The key words "must", "must not", "required", "shall", "shall not", "should", "should not", "recommended", "may", and "optional" in this document are to be interpreted as described in RFC2119 [10]."

2   Security Requirements

2.1   Introduction

In order to consider activities secure, certain requirements must be met. These requirements are considered as minimum-security requirements for the environment in which the SP is used.

These requirements are, in general, non-prescriptive. Participants are permitted to meet requirements by deployment of appropriate controls rather than by using specific tools or solutions, provided that the same security objective is met to an acceptable level. An approach to meeting the security requirements is defined in the SAS Consolidated Security Guidelines (CSG) [5].

NOTE: Numbering of the sections and requirements below restarts at (1) and applies independently of other sections in this document. The requirements should be referenced by the numbering system herein which will be applied consistently across the SAS documentation.

2.2   Application of requirements

The applicability of requirements to different activities is indicated through the following scope symbols:

All	Applies to all participants, regardless of activity
UP	Applies to participants conducting UICC production
SM	Applies to participants conducting Subscription Management activities
CM	Applies to participants conducting Certificate Management activities

In all cases the scope symbols apply:

- to the statement against which they are marked
- to all subsequent statements of the same numbering depth where no different scope has been indicated

All statements of lower depth in the numbering scheme inherit the scope from the parent, unless an alternative scope is indicated.

2.3   Requirements

1	**Policy, strategy and documentation**		
All	The security policy and strategy provides the business and its employees with a direction and framework to support and guide security decisions within the company and at the location where the SP takes place.		
	1.1	Policy	
		1.1.1	A clear direction shall be set and supported by a documented security policy which defines the security objectives and the rules and procedures relating to the security of the SP, sensitive information and asset management.
		1.1.2	Employees shall understand and have access to the policy and its application should be checked periodically.
	1.2	Strategy	
		1.2.1	A coherent security strategy must be defined based on a clear understanding of the risks. The strategy shall use periodic risk assessment as the basis for defining, implementing and updating the site security system. The strategy shall be reviewed regularly to ensure that it reflects the changing security environment through ongoing re-assessment of risks.
	1.3	Business Continuity Planning	
		1.3.1	Business continuity measures must be in place:
			(i) to ensure an appropriate level of availability
			(ii) to enable response and recovery in the event of a disaster.
	1.4	Internal audit and control	
		1.4.1	The overall security management system shall be subject to a rigorous programme of internal monitoring, audit and maintenance to ensure its continued correct operation.

2 Organisation and responsibility

All	A defined organisation shall be responsible for ownership and operation of the security management system.		
	2.1	Organisation	
		2.1.1	To successfully manage security, a defined organisation structure shall be established with appropriate allocation of security responsibilities.
		2.1.2	The management structure shall maintain and control security through a cross-functional team that co-ordinates identification, collation, and resolution, of security issues, independent of the business structure.
	2.2	Responsibility	
		2.2.1	A security manager shall be appointed with overall responsibility for the issues relating to security in the SP.
		2.2.2	Clear responsibility for all aspects of security, whether operational, supervisory or strategic, must be defined within the business as part of the overall security organization.
		2.2.3	Asset protection procedures and responsibilities shall be documented throughout the SP.
		2.2.4	Clear security rules shall govern the manner in which Employees engaged in such activities shall operate within the SP. Relevant guidelines should be in place and communicated to all relevant staff.
	2.3	Incident response and reporting	
		2.3.1	An incident response mechanism shall be maintained that includes a process for the investigation and mitigation of:
			(i) accidental or deliberate breach of internal regulations and procedures
			(ii) suspected or detected compromise of systems, or receipt of notification of system vulnerabilities
			(iii) physical or logical penetration of the site
			(iv) denial of service attacks on components (where applicable)

	2.4	Contracts and liabilities	
		2.4.1	In terms of contractual liability, responsibility for loss shall be documented. Appropriate controls and insurance shall be in place.

3 Information

All	The management of sensitive information, including its storage, archiving, destruction and transmission, can vary depending on the classification of the asset involved.		
	3.1	Classification	
		3.1.1	A clear structure for classification of information and other assets shall be in place with accompanying guidelines to ensure that assets are appropriately classified and treated throughout their lifecycle.
	3.2	Data and media handling	
		3.2.1	Access to sensitive information and assets must always be governed by an overall 'need to know' principle.
		3.2.2	Guidelines shall be in place governing the handling of data and other media, including a clear desk policy. Guidelines should describe the end-to-end 'lifecycle management' for sensitive assets, considering creation, classification, processing, storage, transmission and disposal.

4 Personnel security

All	A number of security requirements shall pertain to all personnel working within the SP and those with trusted positions.		
	4.1	Security in job description	
		4.1.1	Security responsibilities shall be clearly defined in job descriptions.
	4.2	Recruitment screening	
		4.2.1	An applicant, and employee, screening policy shall be in place where local laws allow
	4.3	Acceptance of security rules	

		4.3.1	All recruits shall sign a confidentiality agreement.
		4.3.2	Employees shall read the security policy and record their understanding of the contents and the conditions they impose.
		4.3.3	Adequate training in relevant aspects of the security management system shall be provided on an ongoing basis.
	4.4	Incident response and reporting	
		4.4.1	Reporting procedures shall be in place where a breach of the security policy has been revealed.
		4.4.2	A clear disciplinary procedure shall be in place in the event that a staff member breaches the security policy.
	4.5	Contract termination	
		4.5.1	Clear exit procedures shall be in place and observed with the departure of each Employee.

5   Physical Security

All Physical security controls are required at all sites where SPs are carried out, to consider the location and protection of the sensitive assets (both physical and information) wherever they are stored or processed. Buildings in which sensitive assets are processed or stored shall be of appropriate construction; robust and resistant to outside attack. Sensitive assets must be controlled within high security and restricted areas by using recognised security control devices, staff access procedures and audit control logs.

	5.1	Security plan		
		Layers of physical security control shall be used to protect the SP according to a clearly defined and understood strategy. The strategy shall apply controls relevant to the assets and risks identified through risk assessment.		
		5.1.1	The strategy shall be encapsulated in a security plan that:	
			(i)	defines a clear site perimeter / boundary
			(ii)	defines one or more levels of secure area within the boundary of the site perimeter

			(iii)	maps the creation, storage and processing of sensitive assets to the secure areas
			(iv)	defines physical security protection standards for each level of secure area
	5.2	Physical protection		
		5.2.1	The protection standards defined in the security plan shall be appropriately deployed throughout the site, to include:	
			(i)	physical protection of the building and secure areas capable of resisting attack for an appropriate period
			(ii)	deterrent to attack or unauthorized entry
			(iii)	mechanisms for early detection of attempted attack against, or unauthorized entry into, the secure areas at vulnerable points
			(iv)	control of access through normal entry / exit points into the building and SP to prevent unauthorized access
			(v)	effective controls to manage security during times of emergency egress from the secure area and building
			(vi)	mechanisms for identifying attempted, or successful, unauthorized access to, or within the site
			(vii)	mechanisms for monitoring and providing auditability of, authorised and unauthorised activities within the SP
		5.2.2	Controls deployed shall be clearly documented and up-to-date.	
	5.3	Access control		
		5.3.1	Clear entry procedures and policies shall exist which cater for the rights of Employees, visitors and deliveries to enter the SP. These considerations shall include the use of identity cards, procedures governing the movement of visitors within the SP, delivery/dispatch checking procedures and record maintenance.	
		5.3.2	Access to each secure area shall be controlled on a 'need to be there' basis. Appropriate procedures shall be in place to control, authorise, and monitor access to each secure area and within secure areas.	

	5.4	Security staff	
		5.4.1	Security staff are commonly employed by suppliers. Where this is the case the duties shall be clearly documented and the necessary tools and training shall be supplied.
	5.5	Internal audit and control	
		5.5.1	Physical security controls shall be subject to a rigorous programme of internal monitoring, audit and maintenance to ensure their continued correct operation.

6   Certificate and key management

All	Technical and procedural controls shall be applied to cryptographic keys and certificates related to the SP at the site. Applicable requirements will vary according to the level of SP. Specific requirements applying to Root Certificate Authorities (CAs) are highlighted where applicable.	
	6.1	Classification	
		6.1.1	Keys and certificates shall be classified as sensitive information. Logical, physical, personnel and procedural controls shall be applied to ensure that appropriate levels of confidentiality, integrity and availability are applied.
	6.2	Roles and responsibilities	
		6.2.1	Responsibilities and procedures for the management of certificates and cryptographic keys shall be clearly defined.
		6.2.2	Auditable dual-control shall be applied to sensitive steps of key management.
	6.3	Cryptographic key specification	
		6.3.1	Technical specifications for cryptographic keys and certificates shall be selected that are: • compliant with relevant or applicable standards or

			• of an appropriate level to the asset(s) protected, based on risk and lifespan.
	6.4	Cryptographic key management	
		6.4.1	Cryptographic keys, certificates and activation data shall be generated, exchanged, stored, backed-up and destroyed securely.
		6.4.2	The cryptographic key management process shall be documented and cover the full lifecycle of keys & certificates.
CM **SM**		6.4.3	The cryptographic computation for certificate generation (derivations, random generations) and storage of keys involved in the protection of the sensitive data (i.e. Class 1 data) shall rely on hardware security modules (HSM) that are FIPS 140-2 level 3 certified.
	6.5	Audit and accountability	
		6.5.1	Key management activities shall be controlled by an audit trail that provides a complete record of, and individual accountability for, all actions.
CM **SM**	6.6	GSMA Public Key Infrastructure (PKI) Certificates	
		6.6.1	Supplier certificates used as part of any GSMA PKI shall be signed by a CA authorized by and acting on behalf of the GSMA

7	**Sensitive process data management**		
UP **SM**	The site shall be responsible for lifecycle management of Class 1 data used within the SP. Information and IT security controls must be appropriately applied to all aspects of lifecycle management to ensure that data is adequately protected. The overall principle shall be that all data is appropriately protected from the point of receipt through storage, internal transfer, processing and through to secure deletion of the data.		
	7.1	Data transfer	
		7.1.1	Sites shall take responsibility to ensure that electronic data transfer between themselves and other third parties is appropriately secured.

		7.2	Sensitive data access, storage and retention.		
			7.2.1	Sites shall prevent direct access to sensitive process data where it is stored and processed.	
				(i)	User access to sensitive data shall be possible only where absolutely necessary. All access must be auditable to identify the date, time, activity and person responsible.
				(ii)	System and database administrators may have privileged access to sensitive data. Administrator access to data must be strictly controlled and managed. Administrative access to data shall only take place where explicitly authorized and shall always be irreversibly logged.
			7.2.2	Data shall be stored protected appropriate to its classification.	
			7.2.3	Data retention policies shall be defined, monitored and enforced.	
UP		7.3	Data generation		
			7.3.1	As part of the personalisation process secret data may be generated and personalized into the UICC. Where such generation takes place:	
				(i)	The quality of the number generator in use shall be subject to appropriate testing on a periodic basis. Evidence of testing, and successful results, shall be available.
				(ii)	Clear, auditable, controls shall be in place surrounding the use of the number generator to ensure that data is taken from the appropriate source.
UP **SM**		7.4	Auditability and accountability		
			7.4.1	The sensitive process shall be controlled by an audit trail that provides a complete record of, and individual accountability for the lifecycle of information assets to ensure that:	
				(i)	all assets created, processed and deleted are completely accounted for
				(ii)	access to sensitive data is auditable
				(iii)	responsible individuals are traceable and can be held

				accountable
		7.4.2		The audit trail shall be protected in terms of integrity and the retention period must be defined. The audit trail shall not contain sensitive data.
		7.4.3		Auditable dual-control and 4-eyes principle shall be applied to sensitive steps of data processing.
	UP	7.4.4		For UICC production the audit trail shall include:
			(i)	data generation and processing
			(ii)	personalisation
			(iii)	re-personalisation
			(iv)	access to sensitive data
			(v)	Production of customer output files
	7.5	Duplicate production		
		7.5.1		Controls shall be in place to prevent duplicate production.
UP SM	7.6	Data integrity		
		7.6.1		Controls shall be in place to ensure that the same, authorized, data from the correct source is used for the sensitive process and supplied to the customer.
	7.7	Internal audit and control		
		7.7.1		Sensitive data controls shall be subject to a rigorous programme of internal monitoring, audit and maintenance to ensure their continued correct operation.

8   SM-DP, SM-SR, SM-DP+ and SM-DS Service Management

SM	8.1	SM-DP, SM-SR, SM-DP+ and SM-DS Service	
		8.1.1	Systems used for the remote provisioning, management of eUICCs and management of Profiles shall support the secure interfaces as

			defined in SGP.01 [6], SGP.02 [7], SGP.21 [8] and/or SGP.22 [9] as applicable.
		8.1.2	Exchange of data within the SM-DP, SM-SR, SM-DP+ or the SM-DS IT system shall be secured to the level required by its asset classification.
		8.1.3	The SM-DP, SM-SR, SM-DP+ and SM-DS must prevent cross-contamination of assets between different customers.
		8.1.4	Multi-tenant SM-DP, SM-SR, SM-DP+ and SM-DS solutions on the same physical hardware shall ensure customer data is logically segregated between different customers.
	8.2	Remote Entity Authentication	
		8.2.1	All authorized entities in the SM-DP, SM-SR, SM-DP+ and SM-DS processes shall be authenticated by appropriate authentication protocols for example, SM-SR, SM-DP, SM-DP+, SM-DS, MNO.
	8.3	Audit trails	
		8.3.1	The SP shall be logged in an audit trail that provides a complete record of, and individual accountability for:
			(i) Profile Management, Platform Management, IT system and eUICC Management procedures, events management, and communication with other entities through the secure interfaces.
			(ii) Access to sensitive data
		8.3.2	The audit trail shall be managed in accordance with the requirements of 7.4.

9   Logistics and production management

UP	UICC production processes shall be subject to appropriate controls that ensure integrity of, and accountability for, all sensitive assets and prevent duplicate production.		
	9.1	Order management	
		9.1.1	The ordering format shall be agreed between operator and supplier and rules to preserve the integrity of the ordering process shall be in

			place.	
	9.2	Raw materials		
		9.2.1	Raw materials classified as lower than class 2 (plastic sheets, GSM generic components, blank mailers, etc.) are not considered to be security sensitive. However, appropriate controls shall be established for stock movements. The availability of these assets must be ensured.	
		9.2.2	Raw materials classified as class 2 (e.g. non-personalised devices) are considered to be security sensitive. Controls shall be established that:	
			(i)	account for stock movement
			(ii)	prevent unauthorized access
			(iii)	preserve the integrity of batches
			(iv)	prevent availability of class 2 assets within the production environment undermining the quantity control and reconciliation mechanism for class 1 assets.
	9.3	Control, audit and monitoring		
		9.3.1	The production process shall be controlled by an audit trail that:	
			(i)	ensures that the quantities of class 1 assets created, processed, rejected and destroyed are completely accounted for
			(ii)	ensures that the responsible individuals are traceable and can be held accountable
			(iii)	demands escalation where discrepancies or other security incidents are identified.
		9.3.2	The stock of all Class 1 assets must be subject to end-to-end reconciliation in order that every element can be accounted for.	
		9.3.3	Auditable dual-control and 4-eyes principle shall be applied to sensitive steps of the production process, including:	
			(i)	control of the quantity of assets entering the personalisation process
			(ii)	authorization of re-personalisation for rejected UICCs

			(iii)	control of the quantity of assets packaged for dispatch to customers	
			(iv)	destruction of rejected assets	
		9.3.4	Application of 4-eyes principle shall be auditable through production records and CCTV.		
		9.3.5	Regular audits shall be undertaken to ensure the integrity of production controls and the audit trail.		
		9.3.6	Suppliers must demonstrate an ability to prevent unauthorised duplication within the production process during personalisation and re-personalisation.		
		9.3.7	Suppliers must demonstrate an ability to preserve the integrity of batches within the production environment to prevent:		
			(i)	cross-contamination of assets between batches	
			(ii)	uncontrolled assets in the production environment undermining the integrity of the asset control mechanism.	
	9.4	Destruction			
		9.4.1	Rejected sensitive assets must always be destroyed according to a secure procedure and logs retained.		
	9.5	Storage			
		9.5.1	Personalised product shall be stored securely prior to dispatch to preserve the integrity of the batches. Where personalised product is stored for extended periods additional controls shall be in place.		
	9.6	Packaging and delivery			
		9.6.1	Packaging of goods shall be fit for the intended purpose and strong enough to protect them during shipment. Appropriate measures shall be in place to ascertain whether or not goods have been tampered with.		
		9.6.2	Secure delivery procedures shall be agreed between the customer and the supplier which shall include agreed delivery addresses and the method of delivery.		

		9.6.3	Collection and delivery notes must be positively identified. Goods shall only be handed over following the production of the appropriate authority documents. A receipt should be obtained.
	9.7	Internal audit and control	
		9.7.1	Production security controls shall be subject to a rigorous programme of internal monitoring, audit and maintenance to ensure their continued correct operation.

10   Computer and network management

All	The secure operation of computer and network facilities is paramount to the security of data. In particular, the processing, storage and transfer of Class 1 information, which if compromised, could have serious consequences, must be considered. Operation of computer systems and networks must ensure that comprehensive mechanisms are in place to preserve the confidentiality, integrity and availability of data.		
	10.1	Policy	
		10.1.1	A documented IT security policy shall exist which shall be well understood by employees.
	10.2	Segregation of roles and responsibilities	
		10.2.1	Roles and responsibilities for administration of computer systems should be clearly defined. Administration of systems storing or processing sensitive data shall not normally be carried out by users with regular operational responsibilities in these areas. Roles for review of audit logs for sensitive systems should be separated from privileged users (e.g. administrators).
	10.3	Access control	
		10.3.1	Physical access to sensitive computer facilities shall be controlled.
		10.3.2	An access control policy shall be in place and procedures shall govern the granting of access rights with a limit placed on the use of special privilege users. Logical access to IT services shall be via a secure logon procedure.

		10.3.3	Passwords shall be used and managed effectively.	
		10.3.4	Strong authentication shall be deployed where remote access is granted.	
	10.4	Network security		
		10.4.1	Systems and data networks used for the processing and storage of sensitive data shall be housed in an appropriate environment and logically or physically separated from insecure networks.	
		10.4.2	Data transfer between secure and insecure networks must be strictly controlled according to a documented policy defined on a principle of minimum access.	
		10.4.3	The system shall be implemented using appropriately configured and managed firewalls incorporating appropriate intrusion detection systems.	
		10.4.4	Controls shall be in place to proactively identify security weaknesses and vulnerabilities and ensure that these are addressed in appropriate timescales	
		10.4.5	Systems providing on-line, real-time services shall be protected by mechanisms that ensure appropriate levels of availability (e.g. by protecting against denial-of-service attacks).	
	10.5	Systems security		
		10.5.1	Systems configuration and maintenance	
			(i)	Security requirements of systems shall be identified at the outset of their procurement and these factors shall be taken into account when sourcing them.
			(ii)	System components and software shall be protected from known vulnerabilities by having the latest vendor-supplied security patches installed.
			(iii)	System components configuration shall be hardened in accordance with industry best practice
			(iv)	Change control processes and procedures for all changes to system components shall be in place.

			(v)	Processes shall be in place to identify security vulnerabilities and ensure the associated risks are mitigated.
			(vi)	Comprehensive measures for prevention and detection of malware and viruses shall be deployed across all vulnerable systems.
			(vii)	Unattended terminals shall timeout to prevent unauthorised use and appropriate time limits should be in place.
			(viii)	Decertification/decommissioning of assets (such as IT Systems) used as part of the SP shall be documented and performed in a secure manner.
		10.5.2	System back-up	
			(i)	Back-up copies of critical business data shall be taken regularly. Back-ups shall be stored appropriately to ensure confidentiality and availability.
	10.6	Audit and monitoring		
		10.6.1	Audit trails of security events shall be maintained and procedures established for monitoring use.	
	10.7	External facilities management		
		10.7.1	If any sub-contracted external facilities or management services are used, appropriate security controls shall be in place. Such facilities and services shall be subject to the requirements stated in this document.	
	10.8	Internal audit and control		
		10.8.1	IT security controls shall be subject to a rigorous programme of internal monitoring, audit and maintenance to ensure their continued correct operation.	
	10.9	Software Development		
		10.9.1	The software development processes for the SM-DP, SM-SR, or SM-DP+ or SM-DS shall follow industry best practices for development of secure systems.	

Annex A   Document Management

A.1   Document History

Version	Date	Brief Description of Change	Editor / Company
1.0	26 Jul 2016	Created based on SAS-UP Standard document v6. Added Certificate Management requirements and PKI Certificate Policy security requirements.	James Messham, FML
2.0	31 Mar 2017	Incorporated SAS-SM requirements, including SM-DP+ and SM-DS.	RSPSAS subgroup

A.2   Other Information

Type	Description
Document Owner	GSMA Fraud and Security Group
Editor / Company	David Maxwell, GSMA

It is our intention to provide a quality product for your use. If you find any errors or omissions, please contact us with your comments. You may notify us at sas@gsma.com.

Your comments or suggestions & questions are always welcome.
