Mobile Identities

DIGITAL IDENTITY SERVICES BY MNOs

Christian Marc: Marketing Director Mobile ID
February 2016

First European cross border mobile digital identity framework

Citizens connect to national Public Service, cross borders

+ Valid Spanish Identity Broker

SPAIN

Leverage existing strong authentication mechanisms with Mobile ID SIM

Authentication through MNO using GSMA discovery

Gemalto provided authentication service on both ends

Gemalto connector

Cross border european identity verification

GSMA discovery

Unique user experience through Mobile Connect discovery

FINLAND

Gemalto Mobile ID /eIDAS cross border: a digital mobile identity service enabled by

Enabling MNOs to become national **digital identity provider** is about:

- Security level reaches the highest recommendation
- Cost efficiency and high availability : SaaS operation
- **Personal data management sharing** (attributes) under user control and consent

- Facilitate user lifecycle through **Service Portal** and **Registration**
- Accelerate Service Providers **on boarding**
- Unlimited use cases

Digital identity convergence for the future

- Multiple digital identities for various needs increase management complexity
- Convergence with mobility a *Must*
- Multi credentials with mobility, **derived credentials**
- **Multi secure elements to be in use**

- **Personas** managed and shared securely during the **digital lifecycle**
- Citizen in control of its credentials & personas
- Federation is key
- **Mobile Connect** to offer federation and unique experience

A tool for federation and universality

MWC 2016
