

Adaptive Authentication using insights from telco data

Ryan Gosling
Head of Partnerships & Mobile Identity

MWC19 Los Angeles

What are the challenges?

Challenge One

Financial Fraud

Criminals successfully stole £1.2 billion through fraud and scams in UK in 2018.

Challenge Two

Identity Theft

14.4 million victims of identity theft in U.S in 2018

1 million children..

Challenge Three

Strong Customer Authentication

SCA is a requirement of the EU Revised Directive on Payment Services (PSD2) on payment service providers within the European Economic Area.

The requirement ensures that electronic payments are performed with multi-factor authentication, to increase the security of electronic payments.

Challenge Four

Banking Globally

Digital services & mobile first

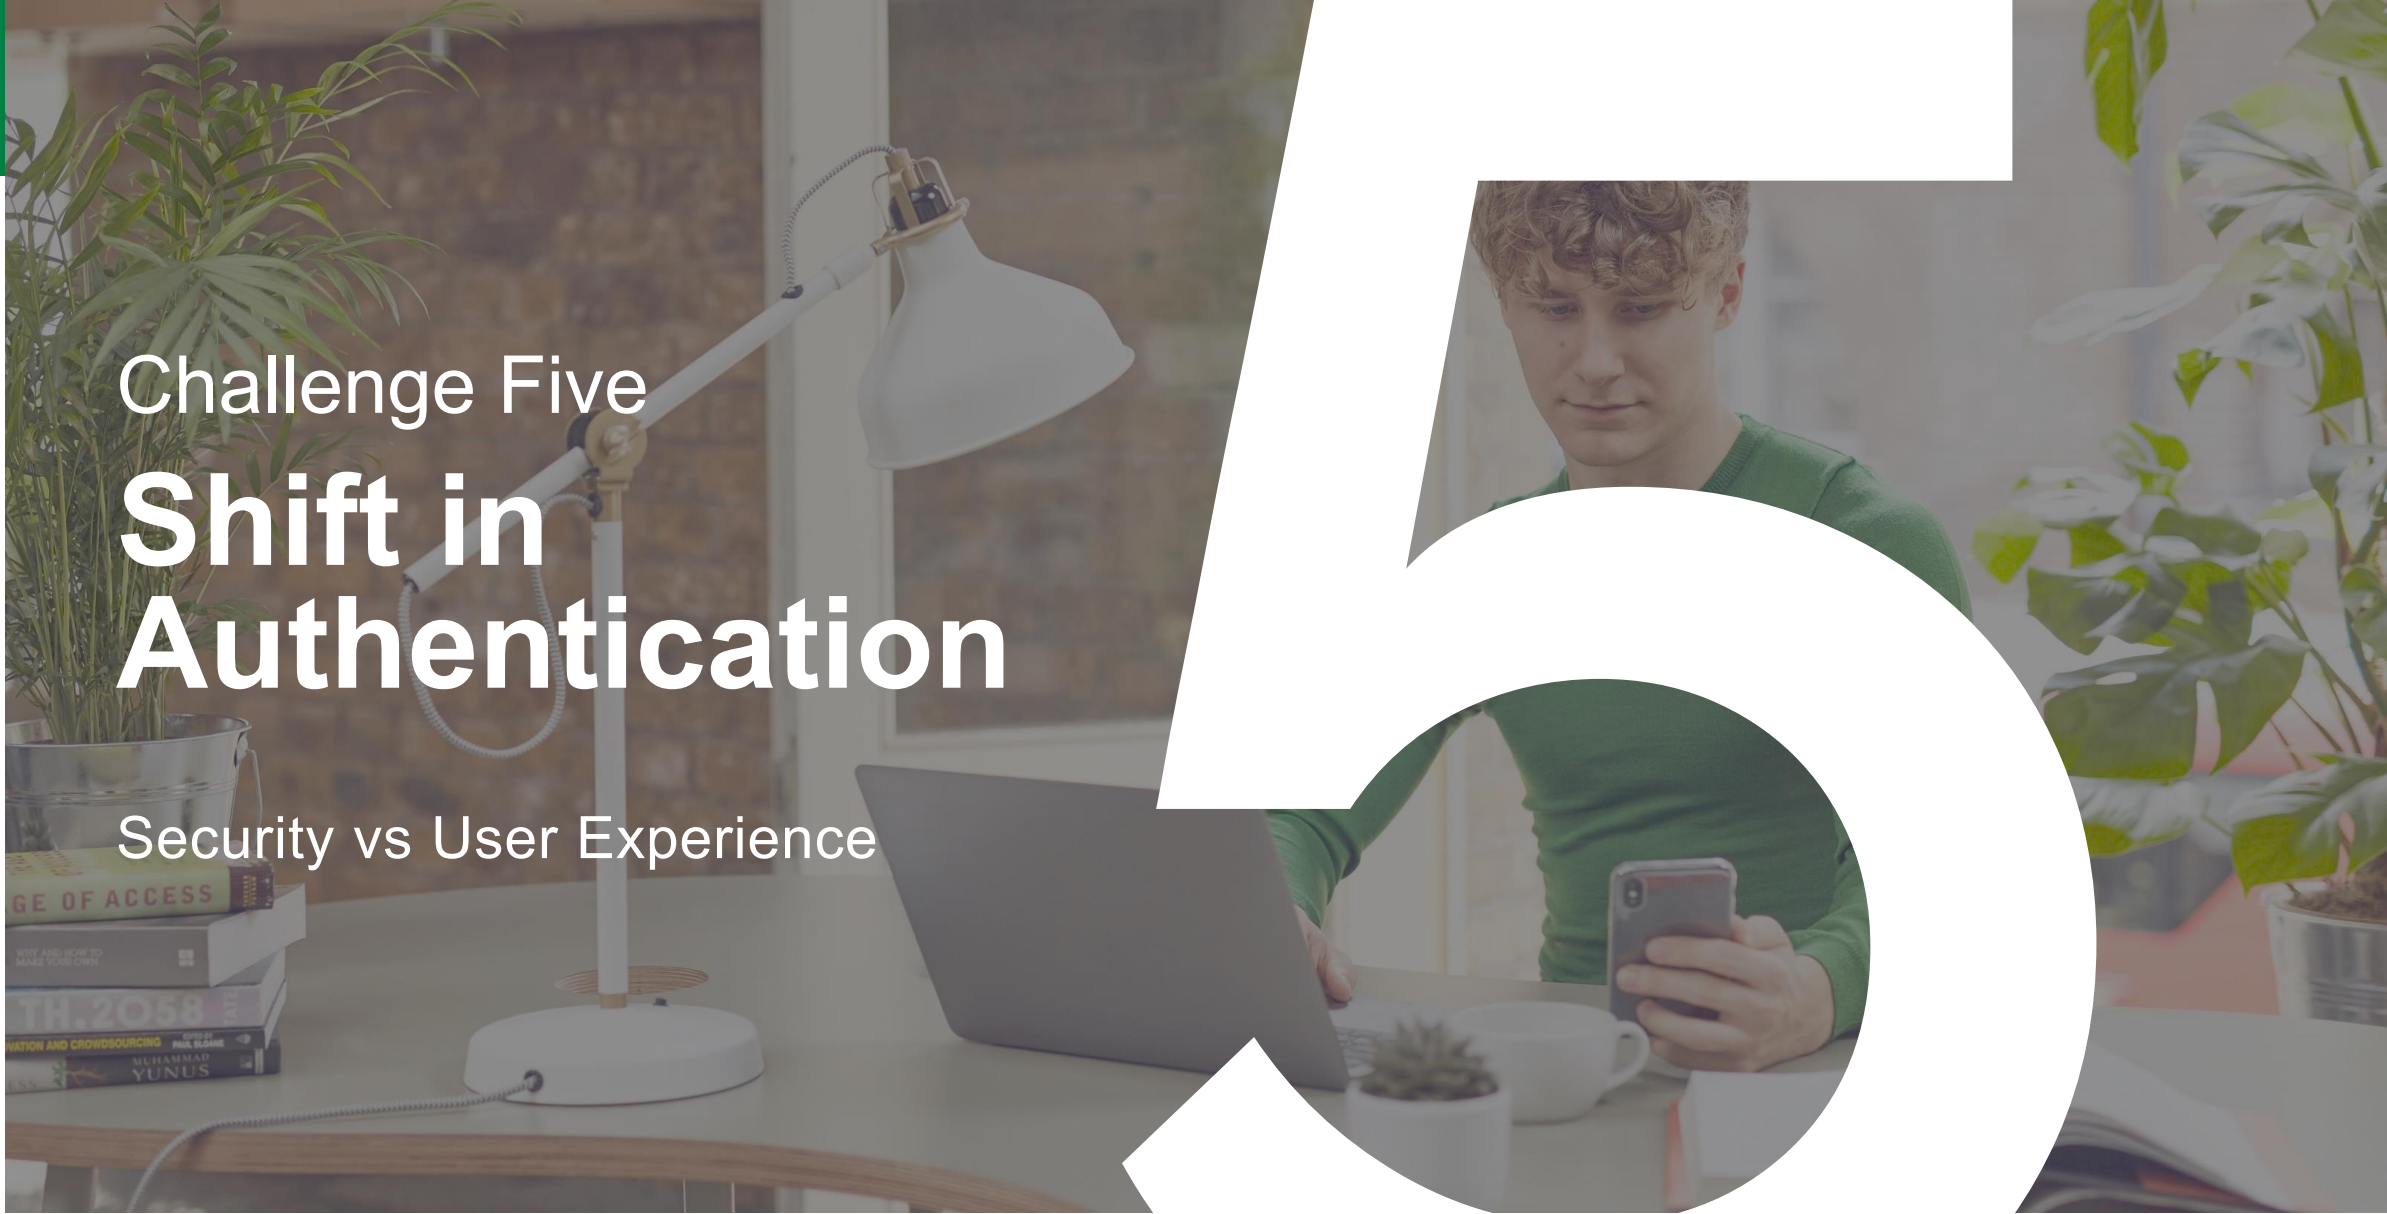

Challenge Five

Shift in Authentication

Security vs User Experience

Adaptive Authentication

Key Things To Consider

Ability

We all have different digital ability & experience

Capability

What device and functionality does our customer have access to?

Preference

Each of us have a preferable method of authentication

Risk Appetite

Certain authentication methods are more secure than others

Context is key to providing adaptive authentication...

Example of Mobile Attributes used as context

Sim Swap
Call divert
Lost & stolen
PayG vs contract

Device type
Location
Contract history
KYC – name & address
Payment history

Why should mobile operators invest in a mobile attribute platform?

1. Enable better protection of their subscribers via specialist identity partners
2. To support partners and end customers deliver a transformed digital user experience
3. Funded through monetization of the mobile data with new & growing revenue streams

Case Study

Fraud reduction with sim swap

1. CHALLENGE & RATIONALE	2. SOLUTION	3. BENEFITS
<p>Sim swap continues to be a global fraud challenge.</p> <p>Sim swap is detection is required as a risk indicator for 2 factor authentication – Phone and SMS.</p> <p>This is used across the Financial Services vertical, as well as wider Digital Service Provider use cases including changing personal details</p>	<p>Callsign integrated with O2, Three, Vodafone and EE to use real-time Sim Swap capability.</p> <p>When a Banking customer makes a high risk transaction, Callsign’s Intelligence Engine utilizing real-time sim swap data to identify risk.</p> <p>Callsign’s Policy then orchestrates relevant authentication journey</p>	<ul style="list-style-type: none">• Reduced sim swap fraud losses• Reduce false positive• Creates revenue stream opportunity for Telco’s

An Adaptive Authentication Journey

Callsign - How It works
