

# DEC Model for RCS – Data Engagement Charging

For GSMA A2P RCS Meeting  
November 16<sup>th</sup>, 2018

# Currently 4 Charging Models for RCS

## Access Based/Hybrid

- Flat fee for unlimited messages to the base
- Access to base + charge per unique user

## Per Event

Replicating existing SMS model

## Session Based

- Time based (5m, 1d, 1w, etc.) or series of messages (i.e. 10 messages = 1 session)
- Discount scheme?

## Revenue Share

Outside the scope of interconnect; likely to be fulfilled through commercial arrangements

# Event Based Model – Agreements and recap from workshop discussions

Rate card vs “payload”

Event = message going to or from the brand/bot

- **Option 1:** Payload = 20mb  
OR
- **Option 2:** Rate card
- **Daily limit** in place to limit bill shock for brands
- **Assumption:** Data model; both parties pay, unless brand specifically agrees to pay for all data

**Action:** Trials and proof of concepts to test event based model

Option 1: Payload		
Message type	Metric/limit	Pricing
Per message	<20mb	£x.xx
Daily cap per conversation (brand does not pay for additional messages over this limit) = 12 messages		

Option 2: Rate card		
Message type	Metric/limit	Pricing
Plain Text Message – (spec limit 8kb) No rich content i.e. QR code	8kb	£x.xx
Rich content i.e. Static image, video, carousel, rich card, audio	<20mb	£x.xx
Location – x	Per content tag	£x.xx
Delivery report	Zero rated	£x.xx
Display report (read receipt)	Per content tag	£x.xx
Daily cap per conversation (brand does not pay for additional messages over this limit) = 12 messages		

# Conversation Based Model – Agreements and recap from workshop discussions

Proposal to rename “session based” model  
to “conversation based” model

Working definition of “conversation based” model

- Conversation starts when the first message is sent whether A2P message or P2A
- Conversation ends when the consumer has been inactive for 60 mins
- Fair use: Over 30 messages per conversation = new conversation

Message type	Metric/limit	Pricing
Time based conversation	60m	£x.xx
# of Messages	30	£x.xx
Per xx MB	20mb?	£x.xx

Daily cap per conversation (brand does not pay for additional messages over this limit) = 12 messages

# Access/Hybrid Active User Model

## Agreements and recap from workshop discussions

- Access charge up front for first message for each unique MSISDN for each bot in a 30 day period
- Access to active user + event, conversation or event + conversation
- Revert to event, conversation or event and conversation based model for additional messages
- Event + conversation = 1<sup>st</sup> message is event, subsequent messages are a conversation
- Tiered payload? 20mb payload limit applies here

Message type	Metric/limit	Pricing
Initial message	Per unique MSISDN, per bot, per 30 day period	£0.xx
There after either		
Event based	As per previous	£0.xx
OR		
Conversation based	As per previous	£0.xx
OR		
event+conversation		£0.xx

Daily cap per conversation (brand does not pay for additional messages over this limit) = xx messages

# Issues with These Proposed Models

- RCS is a data service
- These models perpetuate the current issues with A2P pricing, i.e. a race to zero
- OEMs, Aggregators and Brands really have no say in how the Carriers can charge. They can suggest, but not demand
- Carriers are not being consulted nor are they being vocal about pricing
- Carrier will be pushed into remaining a “dumb pipe”

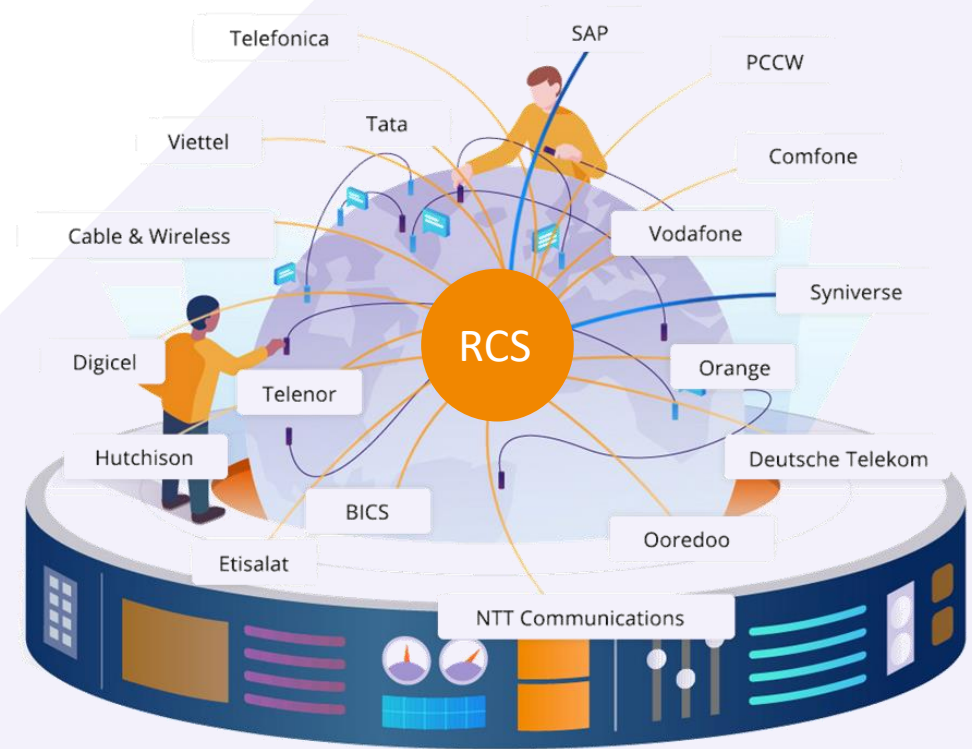

# A Closer Look New AA-66

# New Charging Proposal DEC

- Puts the Carriers in charge
- Charges for data used
- It builds on the current A2P pricing model
- Extremely flexible
- Brands will know the cost based on the program
- Carriers remain in the value chain

# DEC Model Provides Unmatched Flexibility

## Examples

- › Supports 2FA or “Quick Messages”
- › BOT Sessions
- › BOT Sessions with Rich Media
- › Heavy Graphic/Rich Media Messages

Messages Size	Cost
1 – 99kb	\$.001
100kb – 499kb	\$.007
500kb – 999kb	\$.01
1MB – 4.99MB	\$.03
5MB – 9.9MB	\$.05
10MB – 14.99MB	\$.08
15MB – 19.99MB	\$0.12
>20MB	\$0.20
Ancillary Rev Share	XX%

\* Wholesale rates fully negotiable between parties
