1 Scope

This document defines functional extensions to the capabilities defined in ISO/IEC 30118-1:2018 to meet the requirements of Wi-Fi Easy Setup and eSIM Easy Setup. It specifies new Resource Types to enable the functionality and any extensions to the existing capabilities defined in ISO/IEC 30118-1:2018.

2 Normative references

3 Terms, definitions, and abbreviated terms

3.1 Terms and definitions

For the purposes of this document, the terms and definitions given in ISO/IEC 30118-1:2018 and [GSMA SGP.22 Version 2.2.1](#) the following apply.

ISO and IEC maintain terminological databases for use in standardization at the following addresses:

- ISO Online browsing platform: available at <https://www.iso.org/obp>
- IEC Electropedia: available at <http://www.electropedia.org/>

3.1.1

Easy Setup

process of configuring an Enrollee (3.1.3) using a Mediator (3.1.5) by transferring of essential information to the Enrollee (3.1.3)

3.1.2

Easy Setup Enrollment

step during Easy Setup in which the Enrollee (3.1.3) is contacted by the Mediator (3.1.5) to configure the Enroller's (3.1.4) information by means of accessing Easy Setup (3.1.1) Resources

3.1.3

Enrollee

device that needs to be configured and connected. E.g. Air-conditioner, Printer

3.1.4

Enroller

target network entity to which the Enrollee (3.1.3) connects. E.g. Wi-Fi AP

3.1.5

Mediator

logical function that enables the Enrollee (3.1.3) to connect to the target network (i.e. Enroller (3.1.4))

Note 1 to Entry: The Mediator transfers configuration information to the Enrollee. E.g. Mobile Phone
Note 2 to Entry: The Mediator can act as an Enroller as well if the Mediator provides target network to connect. E.g. Mobile Phone which provides IP tethering to the Enrollee

3.1.X1

Activation Code

as defined in GSMA SGP.22 Version 2.2.1

3.1.X2

eUICC

as defined in GSMA SGP.22 Version 2.2.1

3.1.X3

eSIM

The top level generic descriptor applied to the Devices and eUICCs that support Remote SIM Provisioning

3.1.X4

Local Profile Assistant (LPA)

as defined in GSMA SGP.22 Version 2.2.1

3.1.X5

eSIM Profile

a combination of data and applications to be provisioned on an eUICC for the purpose of providing service.

Note 1 to Entry: eSIM Profile is considered as the Profile defined in GSMA SGP.22 Version 2.2.1

3.1.X6

Remote SIM Provisioning (RSP)

as defined in GSMA SGP.22 Version 2.2.1

3.1.X7

Subscription

as defined in GSMA SGP.22 Version 2.2.1

3.1.X8

Subscription Manager Data Preparation+ (SM-DP+)

as defined in GSMA SGP.22 Version 2.2.1

3.1.X9

Easy Setup Mode

the mode that enables OCF setup and configuration to an IoT Device

3.1.X10

eSIM Easy Setup Mode

the mode that enables cellular network setting and configuration of remote SIM provisioning

3.2 Abbreviated terms

3.2.1

CID

Company Identifier (ID)

3.2.2

IE

Information Element

3.2.3

Soft AP

Software Enabled Access Point

3.2.4

TLV

Type-Length-Value

4 Document conventions and organization

4.1 Conventions

In this document a number of terms, conditions, mechanisms, sequences, parameters, events, states, or similar terms are printed with the first letter of each word in uppercase and the rest lowercase (e.g., Network Architecture). Any lowercase uses of these words have the normal technical English meaning.

4.2 Notation

In this document, features are described as required, recommended, allowed or DEPRECATED as follows:

Required (or shall or mandatory)(M).

- These basic features shall be implemented to comply with Core Architecture. The phrases "shall not", and "PROHIBITED" indicate behaviour that is prohibited, i.e. that if performed means the implementation is not in compliance.

Recommended (or should)(S).

- These features add functionality supported by Core Architecture and should be implemented. Recommended features take advantage of the capabilities Core Architecture, usually without imposing major increase of complexity. Notice that for compliance testing, if a recommended feature is implemented, it shall meet the specified requirements to be in compliance with these guidelines. Some recommended features could become requirements in the future. The phrase "should not" indicates behaviour that is permitted but not recommended.

Allowed (may or allowed)(O).

- These features are neither required nor recommended by Core Architecture, but if the feature is implemented, it shall meet the specified requirements to be in compliance with these guidelines.

DEPRECATED.

- Although these features are still described in this document, they should not be implemented except for backward compatibility. The occurrence of a deprecated feature during operation of an implementation compliant with the current document has no effect on the implementation's operation and does not produce any error conditions. Backward compatibility may require that a feature is implemented and functions as specified but it shall never be used by implementations compliant with this document.

Conditionally allowed (CA)

- The definition or behaviour depends on a condition. If the specified condition is met, then the definition or behaviour is allowed, otherwise it is not allowed.

Conditionally required (CR)

- The definition or behaviour depends on a condition. If the specified condition is met, then the definition or behaviour is required. Otherwise the definition or behaviour is allowed as default unless specifically defined as not allowed.

Strings that are to be taken literally are enclosed in "double quotes".

Words that are emphasized are printed in *italic*.

5 Wi-Fi Easy Setup Overview

5.1 Introduction

This document describes a way to setup and configure a new OCF Device, using an already configured OCF Device or onboarding tool.

The described setup and configure mechanism is optional and other mechanisms are allowed to be used.

Specifically, this Wi-Fi Easy Setup method allows ~~the~~ transferring of the essential information to the new Device, which includes:

- Local network connection information, e.g. in case of Wi-Fi it will be Wi-Fi access point information.
- Device Configuration: Additional Device configuration information.

Easy Setup can be enhanced in future by incorporating other suitable technologies.

Annex A specifies the Resource Type definitions using the schema defined in the OpenAPI specification as the API definition language that shall be followed by an OCF Device realizing the Resources specified in this document.

5.2 Architecture

Figure 1 shows the deployment architectural approach.

Figure 1 – Wi-Fi Easy Setup deployment architecture

Wi-Fi Easy Setup defines the following roles: Enrollee, Enroller, and Mediator. Please refer to clause 3 for the definitions thereof.

5.3 Example Scenario

The following scenario presents a typical setup case.

The configuration information and steps taken may vary depending on the Device's type and status.

- 1) The Enrollee enters Easy Setup mode (when the Device is unboxed for the first time, it may be in this mode by default).
- 2) The Mediator discovers and connects to the Enrollee.
- 3) The Mediator performs Security Provisioning of the Enrollee.
- 4) The Mediator transmits Wi-Fi Setting Information to the Enrollee.
- 5) Using the information received from the Mediator, the Enrollee connects to the Enroller (Wi-Fi AP).

6 Wi-Fi Easy Setup Resource model

6.1 Introduction

Devices capable of Wi-Fi Easy Setup shall support the following Resource Types.

- 1) EasySetup Resource Type
- 2) WiFiConf Resource Type
- 3) DevConf Resource Type

The EasySetup Resource Type is a Collection Resource and shall contain Links to instances of at least WiFiConf and DevConf. A vendor may add links to other Resource Types. The relationship between the EasySetup Resource Type and linked Resources is shown in Figure 2.

NOTE The EasySetup Resource Type supports the batch Interface (oic.if.b) which allows for efficient data delivery with a single request rather than multiple requests to each linked Resource.

Figure 2 – Wi-Fi Easy Setup Resource Types

6.2 EasySetup Resource

6.2.1 IntroductionOverview

The EasySetup Resource stores useful information including current status of Enrollee and last error code which was produced in the process of Wi-Fi Easy Setup.

6.2.2 Resource Type

The Easy Setup Resource Type is as defined in Table 1.

Table 1 – EasySetup Resource Type

Example URI	Resource Type Title	Resource Type ID ("rt" value)	Interfaces	Description	Related Functional Interaction
/example/EasySetupResURI	EasySetup	oic.r.easyssetup, oic.wk.col	oic.if.baseline, oic.if.ll, oic.if.b	Top level Resource for Easy Setup. Indicates easy setup status.	N/A

				The Resource properties exposed are listed in Table 2.	
--	--	--	--	--	--

Table 2 defines the details for the "oic.r.easysetup" Resource Type.

Table 2 – "oic.r.easysetup" Resource Type definition

Property title	Property name	Value type	Value rule	Unit	Access mode	Mandatory	Description
Easy Setup Provisioning Status	ps	integer	enum	N/A	R	Yes	Easy setup provisioning status of the Device 0: Need to Setup, 1: Connecting to Enroller, 2: Connected to Enroller, 3: Failed to Connect to Enroller, 4~254: Reserved, 255: EOF
Last Error Code	lec	integer	enum	N/A	R	Yes	Indicates a failure reason if it fails to connect to Enroller 0: No error, 1: Given SSID is not found, 2: Wi-Fi password is wrong, 3: IP address is not allocated, 4: NO internet connection, 5: Timeout, 6: Wi-Fi Auth Type is not supported by the Enrollee, 7: Wi-Fi Encryption Type is not supported by the Enrollee, 8: Wi-Fi Auth Type is wrong (failure while connecting to the Enroller), 9: Wi-Fi Encryption Type is wrong (failure while connecting to the Enroller), 10~254: Reserved, 255: Unknown error.
Connect	cn	array of integer	N/A	N/A	RW	Yes	Array of connection types to trigger Enrollee to initiate connection: 1: Wi-Fi, 2: Other transport to be added in a future (e.g. BLE))
Links	links	array	N/A	N/A	R	Yes	Array of links that are WiFiConf and DevConf Resource.

Enrollee shall set the following as default values (for example, when Device is unboxed first time):

– "ps" equal to 0.

– "lec" equal to 0.

– "cn" equal to an empty array.

6.3 WiFiConf Resource Type

6.3.1 Introduction

The WiFiConf Resource Type stores information to help an Enrollee to connect to an existing Wi-Fi AP.

6.3.2 Resource Type

The WiFiConf Resource Type is as defined in Table 3.

Table 3 – WiFiConf Resource Type

Example URI	Resource Type Title	Resource Type ID ("rt" value)	Interfaces	Description	Related Functional Interaction
/example/WiFiConfResURI	WiFiConf	oic.r.wificonf	oic.if.baseline, oic.if.rw	Contains Wi-Fi related properties The Resource properties exposed are listed in Table 4.	N/A

Table 4 defines the details for the "oic.r.wificonf" Resource Type.

Table 4 – "oic.r.wificonf" Resource Type definition

Property title	Property name	Value type	Value rule	Unit	Access mode	Mandatory	Description
Supported Wi-Fi Mode Type	swmt	array of string	enum	N/A	R	Yes	Supported Wi-Fi modes by Enrollee. Can be multiple. ("A", "B", "G", "N", "AC")
Supported Wi-Fi Frequency	swf	array of string	Refer to description for valid values.	N/A	R	Yes	Supported Wi-Fi frequencies by Enrollee. Can be multiple. ("2.4G", "5G")
Target Network Name	tnn	string	N/A	N/A	RW	Yes	Target network name (SSID of Wi-Fi AP i.e. enroller)
Credential	cd	string	N/A	N/A	RW	No	Credential information of Wi-Fi AP (Password used to connect to enroller).
Wi-Fi Auth Type	wat	string	enum	N/A	RW	Yes	Wi-Fi auth type ("None", "WEP", "WPA_PSK", "WPA2_PSK")
Wi-Fi Encryption Type	wet	string	enum	N/A	RW	Yes	Wi-Fi encryption type ("None", "WEP_64", "WEP_128", "TKIP", "AES", "TKIP_AES")

Supported Wi-Fi Auth Type	swat	array of string	enum	N/A	R	Yes	Supported Wi-Fi Auth types. Can be multiple. ("None", "WEP", "WPA_PSK", "WPA2_PSK")
Supported Wi-Fi Encryption Type	swet	array of string	enum	N/A	R	Yes	Supported Wi-Fi Encryption types. Can be multiple. ("None", "WEP-64", "WEP_128", "TKIP", "AES", "TKIP_AES")

6.4 DevConf Resource Type

6.4.1 Introduction

The DevConf Resource Type stores Device configuration information required in Wi-Fi Easy Setup.

6.4.2 Resource Type

The DevConf Resource Type is as defined in Table 5

Table 5 – DevConf Resource Type

Example URI	Resource Type Title	Resource Type ID ("rt" value)	Interfaces	Description	Related Functional Interaction
/example/DevConfResURI	DevConf	oic.r.devconf	oic.if.baseline, "oic.if.r"	Stores device configuration information required in Easy Setup process The Resource properties exposed are listed in Table 6.	N/A

Table 6 defines the details for the "oic.r.devconf" Resource Type.

Table 6 – "oic.r.devconf" Resource Type definition

Property title	Property name	Value type	Value rule	Unit	Access mode	Mandatory	Description
Device Name	dn	one of: string or array of object	N/A	N/A	R	Yes	Indicates a pre-configured device name in language indicated by "dl" in "/oic/con". or An array of objects where each object has a language field (containing an IETF RFC 5646 language tag) and a value field containing the pre-configured device name in the indicated language. The pre-configured device name is presented by enrollee to mediator during easy-setup process.

6A eSIM Easy Setup Overview

6A.1 Introduction

eSIM Easy Setup describes a way to setup cellular network setting and to configure remote SIM provisioning to an OCF Device with eUICC.

The described setup and configure mechanism should be used with Easy Setup Resource Type if the Enrollee has no IP connectivity.

This method allows transferring subscription related information between an Enrollee and a Mediator, which includes:

- Device and eUICC information, used to provide cellular plans to an end user
- Subscription information, comprising, e.g. Activation Code
- Progress information, indicating the status of the eSIM Easy Setup

Editor's Note: Additional subscription information can be added in future upon the completion of GSMA RSP.22 Version 3.0

6A.2 Architecture

Figure X1 shows the deployment architectural approach.

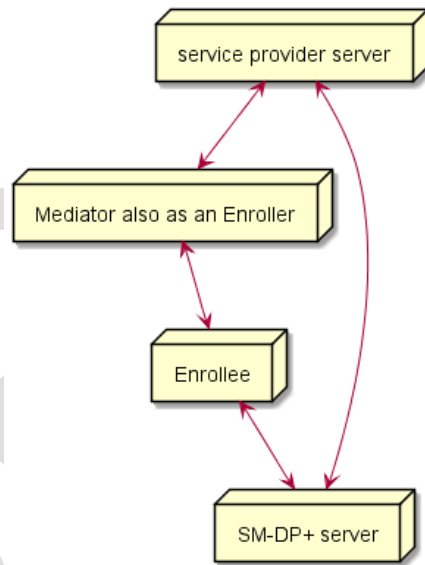

Figure X1 – eSIM Easy Setup deployment architecture

eSIM Easy Setup defines the following roles: Enrollee, Enroller, Mediator, SM-DP+ server, and service provider server. Please refer to clause 3 for the definitions thereof.

6A.3 Example Scenario

The following scenario presents a typical eSIM Easy Setup case. The configuration information and steps taken may vary depending on the Device's type and status.

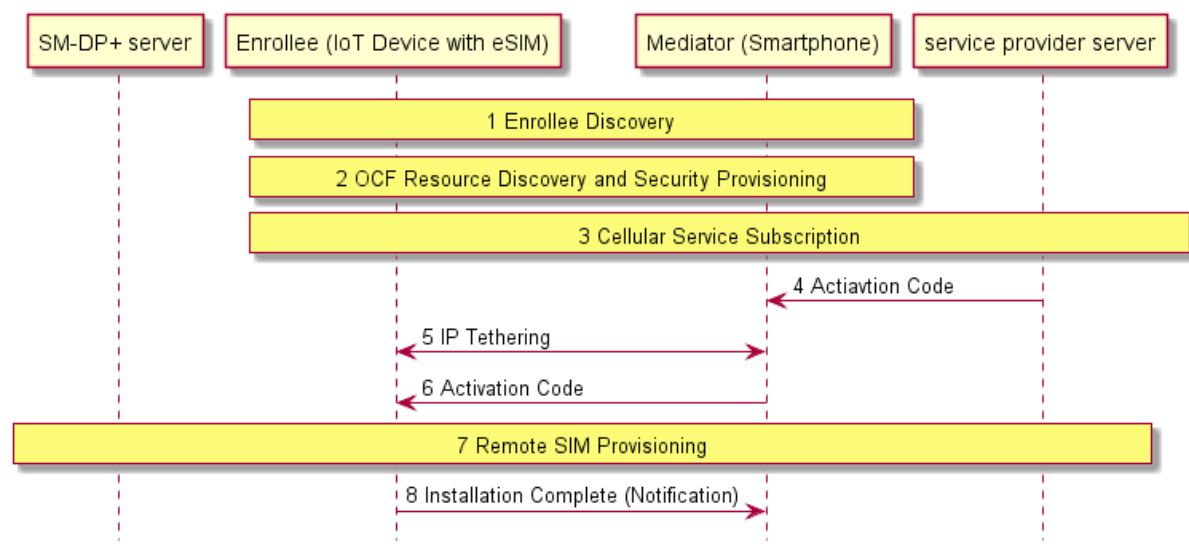

Figure X2 – eSIM Easy Setup example scenario

- 4) When an Enrollee (e.g. IoT Device with eSIM) is unboxed for the first time, the Enrollee creates SoftAP to make it discoverable. A Mediator (e.g. smartphone) discovers and connects to the Enrollee.
- 5) The Mediator discovers OCF Resources of the Enrollee and performs Security Provisioning (e.g. Ownership Transfer) of the Enrollee. If eSIM Easy Setup Resources are found, the Mediator may enter eSIM Easy Setup Mode as a default and displays a certain menu (e.g. activate cellular plan) on the screen.
- 6) An end user enters to buy a cellular plan (e.g. when the user clicks the button) for its Enrollee. The Enrollee may deliver its Device and eUICC information to the Mediator so that the Mediator forwards that information to a service provider server. Based on the information, the service provider provides cellular plans to select.
- 7) Once the end user finishes the contract on his or her cellular plan, the service provider server sends an Activation Code to the Mediator.
- 8) The Mediator transmits its Wi-Fi Setting Information to the Enrollee. Using the Wi-Fi Setting Information received from the Mediator, the Enrollee connects to the Mediator as an Enroller (i.e. IP tethering).
- 9) The Mediator now transmits the Activation Code to the Enrollee.
- 10) Via the Mediator's IP network, an eSIM Profile is downloaded from SM-DP+ server to the Enrollee, and then the Enrollee installs the eSIM Profile. While downloading the eSIM Profile, any Progress information required to display to the end user is notified to the Mediator.
- 11) The Enrollee notifies the Mediator once the eSIM Profile installation is completed. The Enrollee can connect to the cellular network directly. The Enrollee and The Mediator disconnect its local network connection (i.e. IP tethering) if necessary.

6B eSIM Easy Setup Resource Model

6B.1 Introduction

Devices capable of eSIM Easy Setup shall support the following Resource Types.

1) eSIMEasySetup Resource Type

2) RSPCapability Resource Type

3) RSPConf Resource Type

The eSIMEasySetup Resource Type is a Collection Resource and shall contain Links to instances of at least RSPCapability Resource and RSPConf Resource. A vendor may add links to other Resources. For example, it can add link to Easy Setup Resource Type to support unboxing scenario of an eSIM capable IoT device.

The relationship between the eSIMEasySetup Resource Type and linked Resources is shown in Figure X3.

NOTE The eSIMEasySetup Resource Type supports the batch Interface (oic.if.b) which allows for efficient data delivery with a single request rather than multiple requests to each linked Resource.

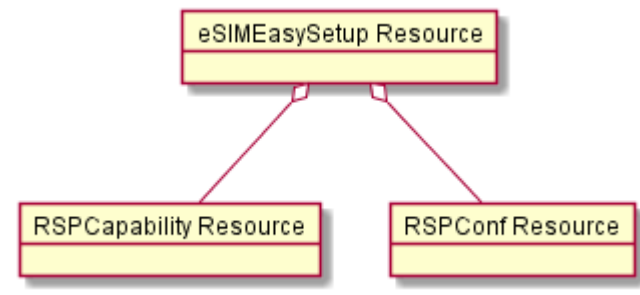

Figure X3 – eSIM Easy Setup Resource Types

6B.2 eSIMEasySetup Resource Type

6B.2.1 Introduction

The eSIMEasySetup Resource Type stores useful information including Remote SIM Provisioning (RSP) status, and RSP last error code which was produced in the process of eSIM Easy Setup.

6B.2.2 eSIM EasySetup Resource Type

The eSIMEasySetup Resource Type is as defined in Table X1.

Table X1 – eSIMEasySetup Resource Type

Example URI	Resource Type Title	Resource Type ID ("rt" value)	Interfaces	Description	Related Functional Interaction
/example/eSIMEasySetupResURI	eSIMEasySetup	oic.r.esimeasysetup, oic.wk.col	oic.if.baseline, oic.if.ll, oic.if.b	Top level Resource for eSIM Easy Setup. Indicates eSIM Easy Setup status. The Resource properties exposed are listed in Table X2.	N/A

Table X2 defines the details for the "oic.r.esimeasysetup" Resource Type.

Table X2 – "oic.r.esimeasysetup" Resource Type Definition

Property title	Property name	Value type	Value rule	Unit	Access mode	Mandatory	Description
RSP Procedure Status	ps	string	enum	N/A	RW	Yes	Steps in Remote SIM Provisioning.

							<u>("Initiated", "User confirmation pending", "Confirmation received", "Downloaded", "Installed", "Error")</u>
<u>RSP Last Error Reason</u>	<u>ler</u>	<u>string</u>	<u>N/A</u>	<u>N/A</u>	<u>R</u>	<u>Yes</u>	<u>Error Reason returned by the LPA while eSIM Easy Setup. It indicates where it occurred.</u> <u>(e.g., ES9+.GetBoundProfilePackage(Fail), ES10b.LoadBoundProfilePackage(Fail))</u>
<u>RSP Last Error Code</u>	<u>lec</u>	<u>string</u>	<u>N/A</u>	<u>N/A</u>	<u>R</u>	<u>Yes</u>	<u>Error Code returned by the LPA while eSIM Easy Setup. It indicates why it occurred.</u> <u>(e.g., "8.8.1-3.8", "7", "6A 80")</u> <u>See more details in the Table X2</u>
<u>RSP Last Error Description</u>	<u>led</u>	<u>string</u>	<u>N/A</u>	<u>N/A</u>	<u>RW</u>	<u>No</u>	<u>Optional error description returned by the LPA or OCF Client while eSIM Easy Setup. (e.g., Invalid SM-DP+ Address)</u>
<u>RSP End User Confirmation</u>	<u>euc</u>	<u>string</u>	<u>enum</u>	<u>N/A</u>	<u>RW</u>	<u>Yes</u>	<u>End User Confirmation for RSP.</u> <u>("Timeout", "Download Reject", "Download Postponed", "Download OK", "Download and Enable OK")</u>
<u>Links</u>	<u>links</u>	<u>array</u>	<u>N/A</u>	<u>N/A</u>	<u>R</u>	<u>Yes</u>	<u>Array of web links that are RSPCapability Resource and RSPConf Resource</u>

Enrollee shall set the following as default values (for example, when a Device is unboxed the first time):

- "ps" equal to an empty string.
- "les" equal to an empty string.
- "ler" equal to an empty string.
- "led" equal to an empty string.
- "euc" equal to an empty string

Figure X3 is an example of RSP Procedure Status transition.

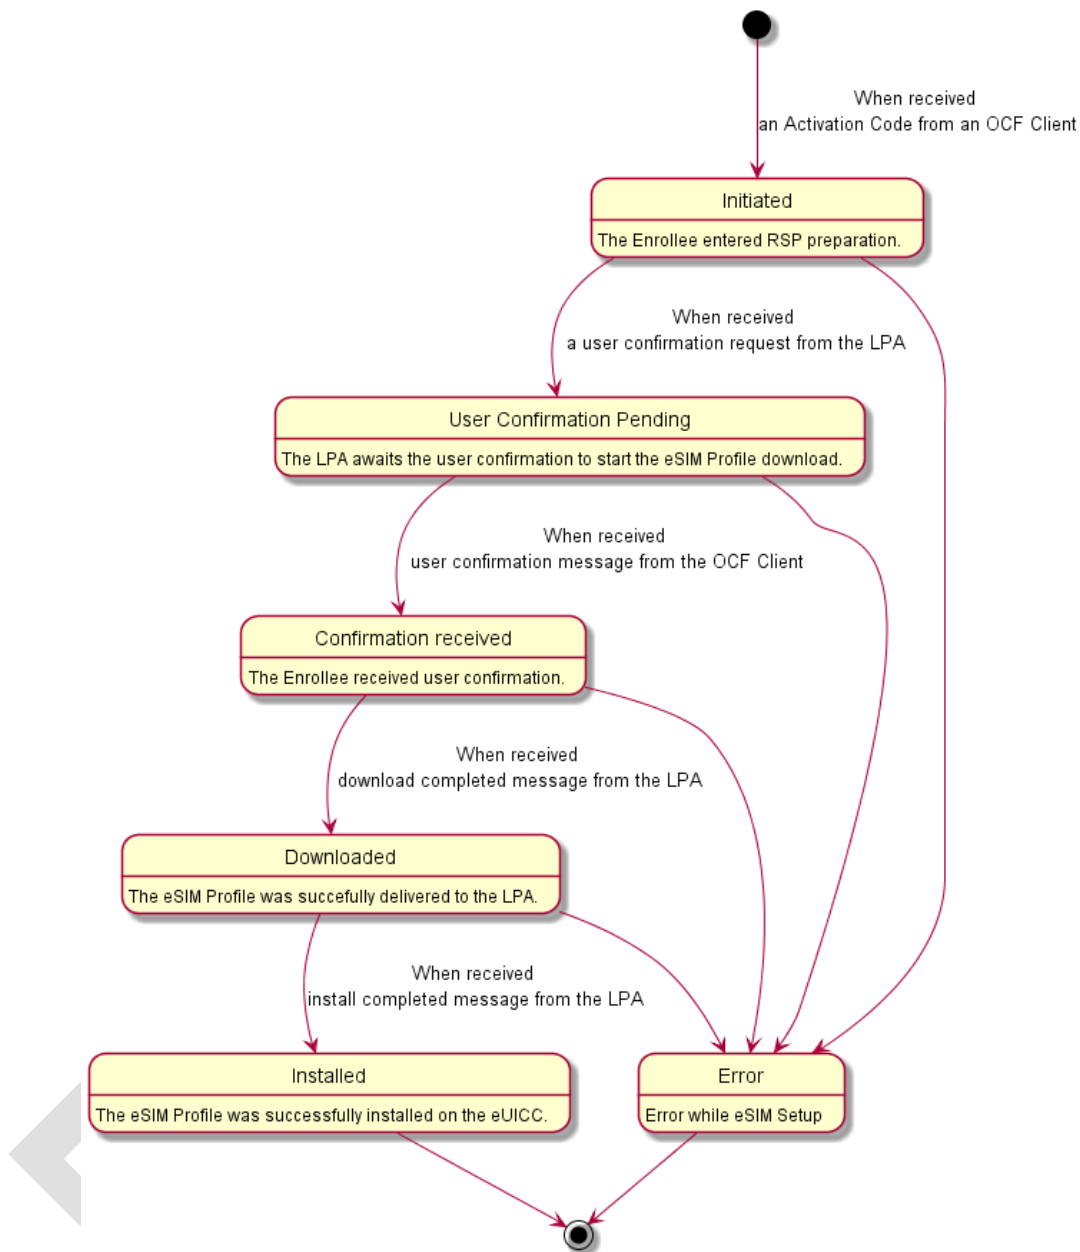

Figure X4 – Example of RSP Procedure Status Transition

LPA returned RSP procedure message to the OCF Server is out of scope in this document. However, the LPA should provide the information on the RSP procedure to the OCF Server. Table X3 indicates that LPA received values while Remote SIM Provisioning procedure, and its expected mapping RSP Procedure Status Property Value.

Table X3 – GSMA RSP procedure mapping to the OCF RSP Procedure Status

<u>LPA received Value while RSP procedure</u>	<u>Mapping OCF RSP Procedure Status Property</u>
<u>ES9+.AuthenticateClient(Success)</u>	<u>User Confirmation Pending</u>

ES9+.GetBoundProfilePackage(Success)	Downloaded
ES10b.LoadBoundProfilePackage(Success)	Installed
See Table X4	Error

Table X4 shows the example of error messages the LPA could receive while RSP procedure. To notify the error to the user, LPA should provide the LPA received error information (i.e., Last Error Reason, Last Error Code, and Last Error Description) to the OCF Server. It is not recommended that the LPA in the Enrollee presents an end user confirmation message and error message if an Enrollee has a limited UI capability.

Table X4 – Example of LPA received Error Message while RSP Procedure

Last Error Reason	Last Error Code	Last Error Description
ES9+.InitiateAuthentication(Fail)	8.8.1–3.8	Invalid SM-DP+ Address
ES9+.AuthenticateClient(Fail)	8.2.6–3.8	MatchingID is refused
ES9+.AuthenticateClient (Fail)	8.2–1.2	Profile has not yet been released
ES9+.AuthenticateClient(Fail)	8.8.5–4.10	The download order has expired
ES10b.PrepareDownload(Fail)	1	invalid certificate
ES10b.PrepareDownload(Fail)	2	invalid signature
ES9+.GetBoundProfilePackage(Fail)	8.2.7–2.2	Confirmation Code is missing
ES9+.GetBoundProfilePackage(Fail)	8.2.7–3.8	Confirmation Code is refused
ES10b.LoadBoundProfilePackage(Fail)	6A 80 (HEX)	Incorrect values in command data
ES10b.LoadBoundProfilePackage(Fail)	69 85 (HEX)	Conditions of use not satisfied (wrong TLV in Bound Profile Package)

Note 1: (HEX) in the Last Error Code row indicates that the number is returned as the Hexadecimal number while other Last Error Codes are returned as the decimal number.

6B.3 RSPCapability Resource Type

6B.3.1 Introduction

RSPCapability Resource Type stores information to help a service provider to provide appropriate cellular plans to an end user.

Note: OCF Server receives eUICC information and device information for RSP from LPA as ASN.1 DER encoded Binary String, and then these information passes to a service provider server via OCF Client.

6B.3.2 Resource Type

The RSPCapability Resource Type is as defined in Table X5.

Table X5 – RSPCapability Resource Type

URI	Resource Type Title	Resource Type ID ("rt" value)	Interfaces	Description	Related Functional Interaction
/example/RSPCapabilityResURI	RSPCapability	oic.r.rspcapability	oic.if.baseline, oic.if.r	Contains eUICC and/or device configuration information required in eSIM Easy Setup process.	N/A

				The Resource properties exposed are listed in Table X6.	
--	--	--	--	---	--

Table X2 defines the details for the "oic.r.rspcapability" Resource Type.

Table X6 – " oic.r.rspcapability" Resource Type definition

<u>Property title</u>	<u>Property name</u>	<u>Value type</u>	<u>Value rule</u>	<u>Unit</u>	<u>Access mode</u>	<u>Mandatory</u>	<u>Description</u>
<u>eUICC Information</u>	<u>euiccinfo</u>	<u>string</u>	<u>Max.256 octets</u>	<u>N/A</u>	<u>R</u>	<u>Yes</u>	<u>eUICC information used for the eSIM Profile download and installation procedure. Comprises eSIM profile package version, spec version number, capabilities supported by the eUICC as defined by GSMA SGP.22</u>
<u>Device Information for RSP</u>	<u>deviceinfo</u>	<u>string</u>	<u>Max. 256 octets</u>	<u>N/A</u>	<u>R</u>	<u>Yes</u>	<u>Device information used for the eSIM Profile download and installation procedure. Comprises TAC(Type Allocation Code), radio access technologies as defined by GSMA SGP.22</u>

Note: Max. Length in Value rule is FFS

6B.4 RSPConf Resource Type

6B.4.1 Introduction

RSPConf Resource Type stores the information used to download and install an eSIM Profile to an eSIM capable IoT device.

6B.4.2 Resource Type

The RSPConf Resource Type is as defined in Table X7.

Table X7 – RSPConf Resource Type

<u>URI</u>	<u>Resource Type Title</u>	<u>Resource Type ID ("rt" value)</u>	<u>Interfaces</u>	<u>Description</u>	<u>Related Functional Interaction</u>
<u>/example/RSPConfRes URI</u>	<u>RSPConf</u>	<u>oic.r.rspconf</u>	<u>oic.if.baseline, oic.if.rw</u>	<u>Contains property used to download and install an eSIM Profile. The Resource property exposed is listed in Table X8.</u>	<u>N/A</u>

Table X4 defines the details for the "oic.r.rspconf" Resource Type.

Table X8 – RSPConf Resource Type Definition

<u>Property title</u>	<u>Property name</u>	<u>Value type</u>	<u>Value rule</u>	<u>Unit</u>	<u>Access mode</u>	<u>Mandatory</u>	<u>Description</u>
<u>Activation Code</u>	<u>ac</u>	<u>string</u>	<u>Max. 256 characters</u>	<u>N/A</u>	<u>RW</u>	<u>Yes</u>	<u>The information needed to provision an eSIM device.</u> <u>Comprises SM-DP+ server FQDN and Activation Code Token binding to a specific subscription as defined by GSMA SGP.22</u>
<u>eSIM Profile Metadata</u>	<u>pm</u>	<u>string</u>	<u>Max.256 octets</u>	<u>N/A</u>	<u>R</u>	<u>Yes</u>	<u>eUICC information used for the eSIM Profile download and installation procedure.</u> <u>Comprises an eSIM Profile package version, spec version number, capabilities supported by the eUICC as defined by GSMA SGP.22.</u> <u>This information is returned from the LPA as ASN.1 DER encoded binary data format, and base64 encoding is used to convert to JSON.</u>
<u>Confirmation Code</u>	<u>cc</u>	<u>string</u>	<u>N/A</u>	<u>N/A</u>	<u>RW</u>	<u>No</u>	<u>A code entered by an end user required by the SM-DP+ to confirm the download and installation of an eSIM Profile. The Confirmation Code is provided from a service provider to the end user.</u>
<u>Confirmation Code Required</u>	<u>ccr</u>	<u>boolean</u>	<u>N/A</u>	<u>N/A</u>	<u>RW</u>	<u>Yes</u>	<u>Indicates whether a Confirmation Code is required. Set to "true" if Confirmation Code is required and required a user to enter Confirmation Code</u>

Note: Max. Length in eSIM Profile Metadata Value rule is FFS

7 Network and connectivity

Both the Mediator and Enrollee communicate via a common connectivity (e.g. Wi-Fi).

If using Wi-Fi for Easy Setup then the Enrollee shall have capability to act as a Soft AP. If an Enrollee uses Wi-Fi for IP tethering for eSIM Easy Setup, the Mediator shall have capability to act as a SoftAP. A Soft AP shall support the access point requirements defined by IEEE 802.11:2016.

Once eSIMEasySetup process is completed, the IP connection (i.e., IP tethering) between an Enroller and an Enrollee should be destroyed.

8 Functional interactions

8.1 Onboarding, Provisioning and Configuration

The Mediator may be present as a standalone function or in conjunction with other functions or services such as AMS as part of an OBT (Onboarding Tool); please refer to the ISO/IEC 30118-2:2018.

8.2 Resource discovery

The Mediator connects to the Enrollee via a mutually supported connection.

When in Easy Setup phase, if using Wi-Fi as the connectivity between the Enrollee and the Mediator then the Enrollee shall make itself discoverable as a Soft AP. The Soft AP has additional availability constraints which are documented in ISO/IEC 30118-2:2018.

8.3 Retrieving and Updating Easy Setup Resources

The Enrollee shall expose Easy Setup Resources (i.e. EasySetup Resource, eSIMEasySetup Resource) such that a Mediator is able to discover them using standard OCF Resource discovery methods (i.e. via a RETRIEVE on /oic/res); see the ISO/IEC 30118-1:2018, clause 11.3.

Easy Setup Resources shall expose only secure Endpoints (e.g. CoAPS); see the ISO/IEC 30118-1:2018, clause 10.

The Mediator may RETRIEVE a Resource within the Easy Setup Collection or the Collection itself to check the Enrollee's status at any stage of Easy Setup. This applies only when the Enrollee & the Mediator are on a common network.

The Mediator may UPDATE Resource Property(-ies) on the Enrollee. Upon receipt of the request from the Mediator the Enrollee shall update its current Resource Property Values, and shall perform any required action. For example, if the "cn" Property of "EasySetup" Resource is updated by the Mediator, to indicate connection to Wi-Fi, the Enrollee shall start the connection to Enroller.

For details of Easy Setup Resources refer to clause 6.

8.4 Error Handling

8.4.X1 WiFi Easy Setup Error Handling

The "lec" Property of the EasySetup Resource (i.e. "oic.r.easyssetup") is used to indicate the error that occurred in the Easy Setup process while trying to connect to the Enroller (using the information provided by the Mediator in WiFiConf Resource):

- The Enrollee shall set "lec" Property to 1, if it fails to connect because it can't find the SSID.
- The Enrollee shall set "lec" Property to 2, if it fails to connect due to wrong credential (password) information.

- The Enrollee should set "lec" Property to 6, if the Auth type is not supported by the Enrollee.
- The Enrollee should set "lec" Property to 7, if the Encryption type is not supported by the Enrollee.
- The Enrollee should set "lec" Property to 8, if it fails to connect due to wrong Auth type information (even though it's supported by the Enrollee).
- The Enrollee should set "lec" Property to 9, if it fails to connect due to wrong Encryption type information (even though it's supported by the Enrollee).

When using Wi-Fi as the connectivity between the Enrollee and Mediator, if the Enrollee fails to connect to the Enroller, it shall again make itself discoverable as a Soft AP (in case it destroyed its Soft AP earlier).

8.4.X2 eSIM Easy Setup Error Handling

The "Error" in the "ps" Property of the eSIMEasySetup Resource (i.e. "oic.r.esimeasysetup") is used to indicate the error that occurred in the eSIM Easy Setup process while RSP procedure:

- The Enrollee shall set "ps" Property to "Error" if it fails to download and install an eSIM Profile.
- "les" and "lec" Properties are used to indicate the detailed failure reason and error code within eSIM Profile download and installation returned by the LPA.
- "led" Property is used to indicate additional error description returned by LPA or OCF Client.
- "euc". Property is used to indicate an end user consent. If an end user rejects RSP procedure, Mediator posts "ps" Value to "Error" and records "euc" Value to "Download Reject", and terminate the eSIM Easy Setup Procedure.

For more detailed Error handling within the Remote SIM Provisioning Procedure, refer to SGP.22 v2.2.1 Session 3.1.5, Section 5.6.1-3, Section 5.7.5-6, and Section 5.7.13.

8.5 Example Easy Setup Flow

Figure 3 shows an example Easy Setup flow using Wi-Fi for informative purposes:

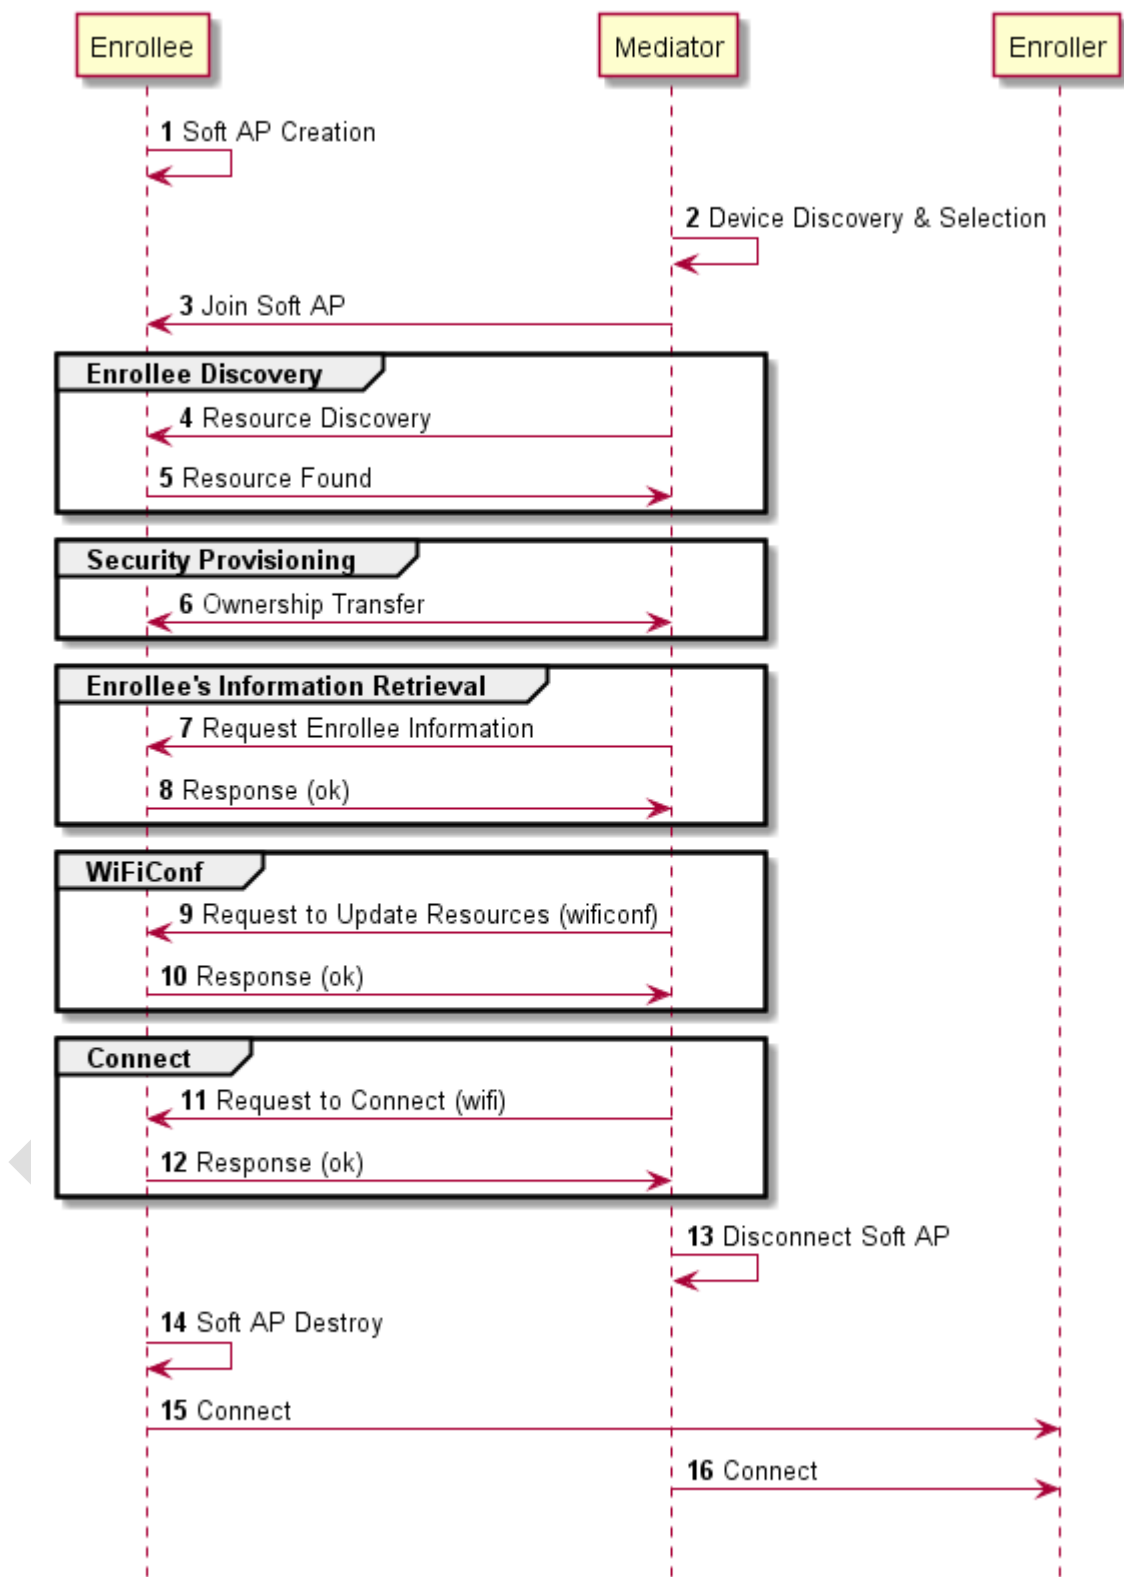

Figure 3 – Easy Setup Flow (Informative)

The example flow in Figure 1 and Figure 3 undergoes security provisioning (step 6) during Easy Setup. Alternatively, security provisioning can be done before Enrollee Discovery (steps 4 and 5) if preferred. Please refer to the ISO/IEC 30118-2:2018 for more information on the different scenarios.

Figure X9 shows an example of eSIM Easy Setup flow based on 6A.3 Example Scenario for informative purposes:

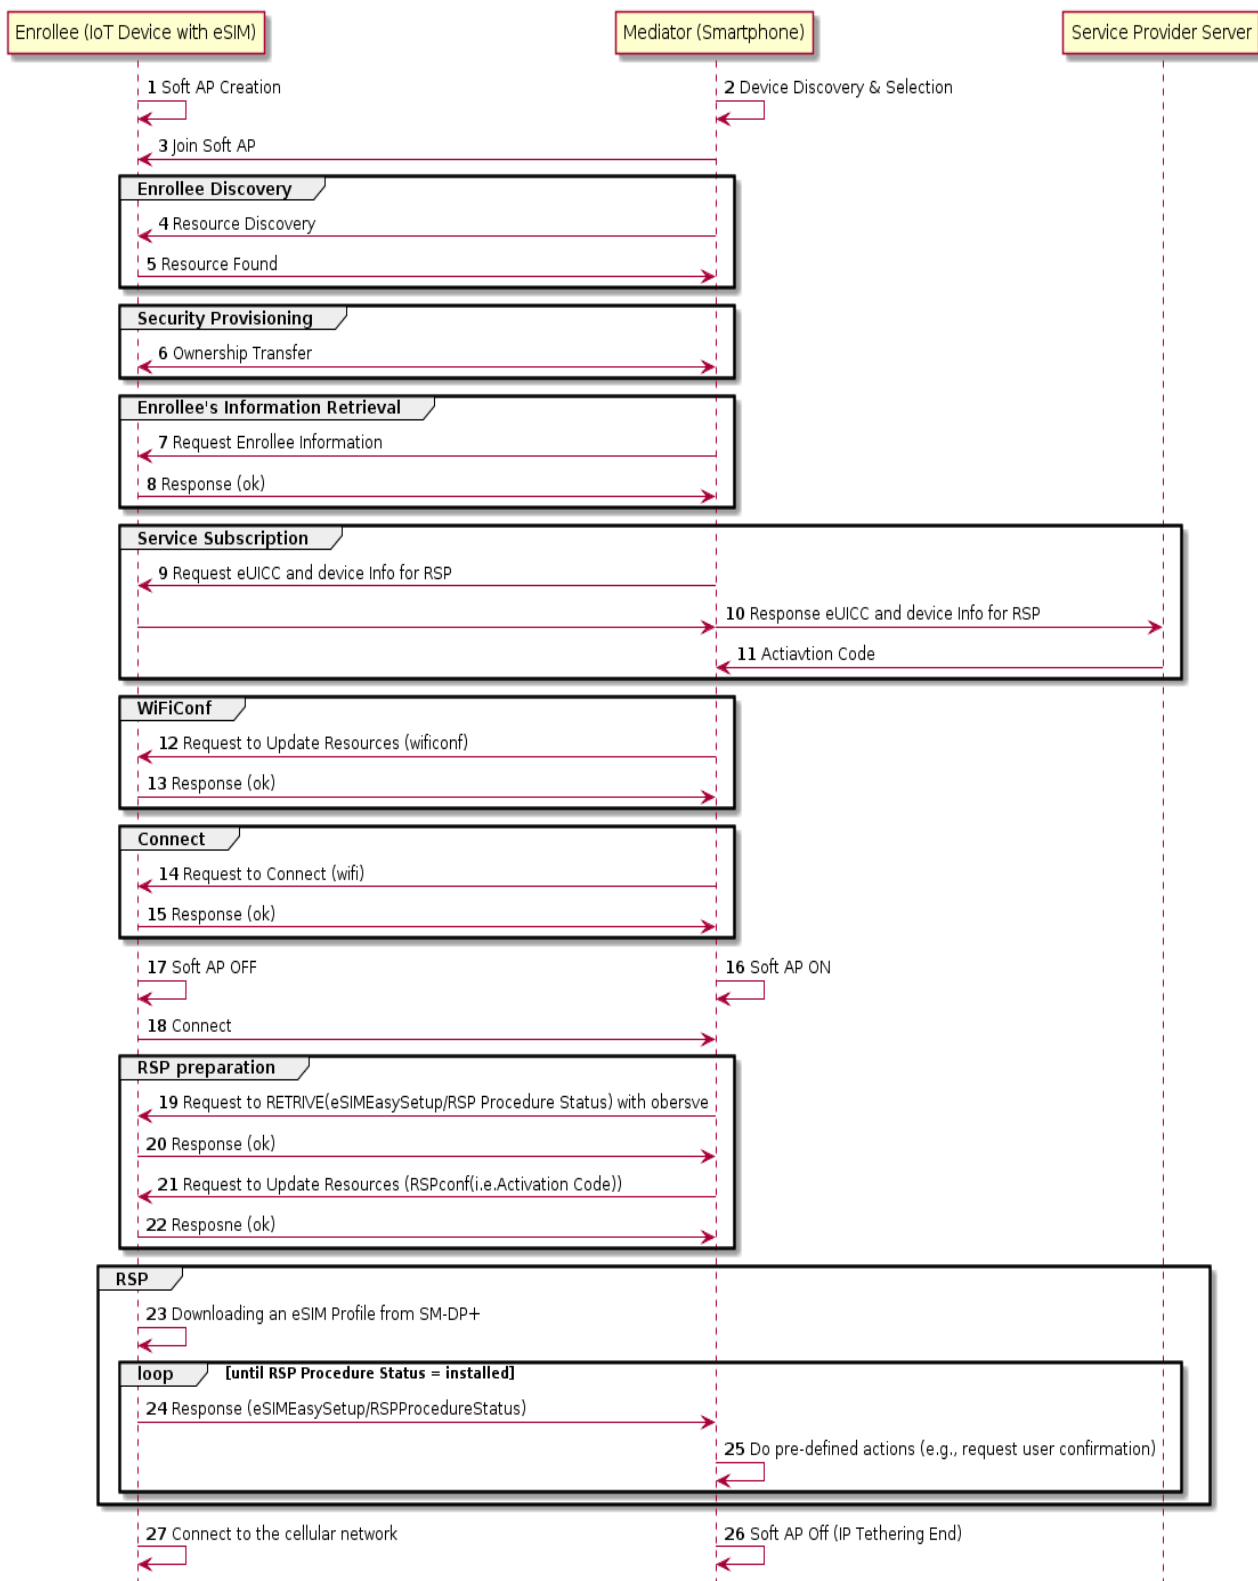

Figure X9 –eSIM Easy Setup Flow (Informative)

8.6 Easy Setup SSID Tags

If using Wi-Fi as the connectivity between the Enrollee and the Mediator then the Enrollee's Soft AP SSID should contain exactly one of the following Easy Setup SSID tags:

- "OCF_"
 - Prefix tag that has to be at the beginning of the SSID.
 - Example: OCF_MySSID
- "_OCF"
 - Suffix tag that has to be at the end of the SSID.
 - Example: MySSID_OCF

These tags are case sensitive.

8.7 Easy Setup Information Element

8.7.1 Overview

If using Wi-Fi as the connectivity between the Enrollee and the Mediator then the Enrollee's Soft AP beacon should contain the Easy Setup Information Element. The information element provides additional information about the device such as a friendly name or device manufacturer for the mediator application. The mediator application can then use this information to provide a better user experience.

8.7.2 OCF Device Information Element (IE)

The Easy Setup Information Element has the structure shown in Figure 4

1 byte	1 byte	3 bytes	1 byte	<252 bytes
Type = 221	Length	CID = 6A 40 65	OCF IE Type = 0	Data

Figure 4 – Easy Setup Information Element Definition

- Type is a unique id allocated by the IEEE registrar to identify different information elements from each other. The Easy Setup Information Element shall have a Type value of 221 which is standard vendor specific information element.
- Length shall indicate the total size of CID, OCF IE Type, and Data in bytes.
- Company ID (CID) is a unique 24-bit identifier for a specific company or organization. The Easy Setup Information Element shall have a CID value of 6A 40 65.
- OCF IE Type is the identifier of the specific IE within OCF. The OCF IE Type shall be set to 0 for Easy Setup.
- Data is a set of type-length-value (TLV) structures that represent the device information in Table 1. The length of this field shall be less than 252 bytes.

Each TLV has the structure shown in Figure 5.

1 byte	1 byte	<250 bytes
Type	Length	Value

Figure 5 – Type-Length-Value Structure

- Type shall indicate the type of the field from Table 7.
 - Length shall indicate the length of the Value in bytes.
 - Value shall represent the corresponding information for specific TLV type from Table 7.
- Data is a set of TLVs as defined in Table 7.

Table 7 – Easy Setup Information Element TLVs

Type	Length (bytes)	Value	Description of TLV	# of Occurrences in IE or IEC	Required
1	<65	Friendly name of the device	Device Friendly Name	1	Y
2	<27	Device Type	Device type/Class	>=1	Y
3	<65	Name of Device Manufacturer	Manufacturer Name	1	Y
4	<43	Language tag for strings	See IETF RFC 5646	1	Y
5	16	Protocol Independent ID in network byte order	See ISO/IEC 30118-1:2018	1	Y
101	<65	Device Type/Class	Device Type as string	>=0	N

The TLVs may be set in any order inside an IE or IEC. All strings shall be UTF-8 encoded and shall not include a null terminator. All TLVs in Table 7 with a required value of "Y" shall be included in the IE or IEC (if multiple IEs are required). The value of each TLV shall meet the length requirements specified in Table 1.

8.7.2.1 Device Friendly Name (Type 1)

User readable string representing the friendly name of the device that is beaconing and ready to undergo Easy Setup. This should match "n" from "oic.wk.d" as defined in the ISO/IEC 30118-1:2018.

This string is in the same language specified in the type 4 TLV.

8.7.2.2 Device Type (Type 2)

Device type shall be the shortened form of Device Type as specified in the ISO/IEC 30118-5:2018. For example:

- Device Type as specified in the ISO/IEC 30118-5:2018: "oic.d.airconditioner"
- Device Type as specified in a type 2 TLV: "airconditioner"

In cases where the device supports multiple functions, several type 2 TLVs may be included to represent each function of the device.

If the device does not support any of the functions as specified in the ISO/IEC 30118-5:2018, at least one type 101 TLV shall be included. Type 101 TLV contains a user readable string in the same language specified in the type 4 TLV. (Ex: "Lock").

If the device supports more than one function, a mix of type 2 and type 101 TLVs may be used depending on which functions are defined in the ISO/IEC 30118-5:2018.

8.7.2.3 Device Manufacturer Name (Type 3)

User readable string representing the manufacturer name of the device that is beaconing and ready to undergo Easy Setup. This should match "mnmn" Property from "oic.wk.p" as defined in the ISO/IEC 30118-1:2018.

This string is in the same language specified in the type 4 TLV.

8.7.2.4 Language Tag (Type 4)

The language of all strings shall be specified in a type 4 TLV. The value of the type 4 TLV shall contain a language tag as described in IETF RFC 5646 (Ex: "en-us"). If the actual length of the language tag exceeds 42 bytes the manufacturer shall exclude subtags on the language tag until it is less than 43 bytes.

Please see 8.7.2.8 for information on supporting multiple languages.

If an IE contains a TLV that is a string (i.e. type 1, type 3 or type 101), then a type 4 TLV corresponding to the language of the string(s) shall also be present in the IE.

8.7.2.5 Protocol Independent ID (Type 5)

This shall match "piid" from "oic.wk.d" as defined in the ISO/IEC 30118-1:2018.

The piid in the TLV shall be in network byte order.

8.7.2.6 Multiple Information Elements

Additional Easy Setup IEs may be present in the Soft AP beacon in the following situations:

- The total size of the TLVs is larger than the size of Data as defined in an Easy Setup Information Element.
- Support for multiple languages is necessary.

Two or more Easy Setup Information Elements are referred to as an Information Element Collection (IEC).

8.7.2.7 IEC for Large TLV Size Support

If a TLV or set of TLVs will not fit into the current IE, a manufacturer may add additional Easy Setup IEs to contain the TLV/s thereby creating or extending an IEC. The additional IE shall contain the following fields as described in 8.7.2:

- Type
- Length
- CID
- OCF IE Type

If an IE contains a TLV that is a string (i.e. type 1, type 3 or type 101), then a type 4 TLV corresponding to the language of the string(s) shall also be present in the IE.

8.7.2.8 IEC for Multiple Language Support

A manufacturer may include additional Easy Setup IEs to support multiple languages in the Soft AP beacon. In the case that a manufacturer needs to provide device information in more than one language, they shall include an additional copy of the IE/IEC for each additional language. Each additional IE/IEC shall include all of the mandatory TLVs defined in 8.7.2.

9 Security

A Device shall meet the Wi-Fi Easy Setup [and eSIM Easy Setup](#) security requirements specified in ISO/IEC 30118-2:2018.

Annex A(normative)

OpenAPI 2.0 specification definitions

A.1 List of Resource Type definitions

Table A.1 contains the list of defined resources in this document.

Table A.1 – Alphabetized list of resources

Friendly Name (informative)		Resource Type (rt)	Clause
Device Configuration		"oic.r.devconf"	A.2
Easy Setup		"oic.r.easysetup"	A.3
Wi-Fi Configuration		"oic.r.wificonf"	A.4
eSIM Easy Setup		"oic.r.esimeasysetup"	A.5
Remote SIM Provisioning Capability		"oic.r.rspcapability"	A.6
RSP Configuration		"oic.r.rspconf"	A.7

A.2 Device Configuration

A.2.1 Introduction

The Device configuration Resource stores Device settings such as the Device name. Vendor-specific information can be added to the Resource. The Device name is a human-friendly name read by a Mediator during easy setup.

A.2.2 Example URI

/example/DevConfResURI

A.2.3 Resource type

The Resource Type is defined as: "oic.r.devconf".

A.2.4 OpenAPI 2.0 definition

A.2.5 Property definition

Table A.2 defines the Properties that are part of the "oic.r.devconf" Resource Type.

Table A.2 – The Property definitions of the Resource with type "rt" = "oic.r.devconf".

Property name	Value type	Mandatory	Access mode	Description
id	multiple types: see schema	No	Read Write	
n	multiple types: see schema	No	Read Write	
dn	multiple types: see schema	Yes	Read Write	
rt	array: see schema	No	Read Only	Resource Type of the Resource.
if	array: see schema	No	Read Only	The OCF Interfaces supported by this Resource.

A.2.6 CRUDN behaviour

Table A.3 defines the CRUDN operations that are supported on the "oic.r.devconf" Resource Type.

Table A.3 – The CRUDN operations of the Resource with type "rt" = "oic.r.devconf".

A.3 Easy Setup Collection

A.3.1 Introduction

The Easy Setup Resource stores useful information including the current status of unboxing a Device and the last error code which are produced in the process of easy setup. Note that the Easy Setup Resource is a Collection Resource, which contains Links to WiFiConf, and DevConf Resources and may additionally contain Links to other Resources.

A.3.2 Example URI

/EasySetupResURI

A.3.3 Resource type

The Resource Type is defined as: "oic.r.easyssetup, oic.wk.col".

A.3.4 OpenAPI 2.0 definition

1417 A.3.5 Property definition

1418 Table A.4 defines the Properties that are part of the "oic.r.easysetup, oic.wk.col" Resource Type.

1419 **Table A.4 – The Property definitions of the Resource with type "rt" = "oic.r.easysetup,**
1420 **oic.wk.col".**

Property name	Value type	Mandatory	Access mode	Description
rep	object: see schema	Yes	Read Write	The response payload from a single Resource.
href	multiple types: see schema	Yes	Read Write	
rep	object: see schema	Yes	Read Write	The response payload from a single Resource.
href	multiple types: see schema	Yes	Read Write	
links	array: see schema	No	Read Write	A set of OCF Links.
rts-m	array: see schema	No	Read Only	Resource Type of the mandatory Resources within the Collection.
n	multiple types: see schema	No	Read Write	
if	array: see schema	No	Read Only	The OCF Interfaces supported by this Resource.
ps	integer	Yes	Read Only	Indicates the easy setup status of the Device. (0: Need to Setup, 1: Connecting to Enroller, 2: Connected to Enroller, 3: Failed to Connect to Enroller, 4~254: Reserved, 255: EOF).
lec	integer	Yes	Read Only	Indicates a failure reason (0: NO error, 1: A given SSID is not found, 2: Wi-Fi's

				password is wrong, 3: IP address is not allocated, 4: No internet connection, 5: Timeout, 6: Wi-Fi Auth Type is not supported by the Enrollee, 7: Wi-Fi Encryption Type is not supported by the Enrollee, 8: Wi-Fi Auth Type is wrong (failure while connecting to the Enroller), 9: Wi-Fi Encryption Type is wrong (failure while connecting to the Enroller), 10~254: Reserved, 255: Unknown error).
rt	array: see schema	No	Read Write	
rts	array: see schema	No	Read Only	Resource Type of the Resources within the Collection.
cn	array: see schema	Yes	Read Write	Indicates an array of connection types that trigger an attempt to connect to the Enroller to start.
id	multiple types: see schema	No	Read Write	
rt	array: see schema	Yes	Read Write	Resource Type of the target Resource.
href	multiple types: see schema	Yes	Read Write	
if	array: see schema	Yes	Read Write	The OCF Interfaces supported by the target Resource.
type	multiple types: see schema	No	Read Write	
p	multiple types: see schema	No	Read Write	
ins	multiple types: see schema	No	Read Write	
title	multiple types: see schema	No	Read Write	
anchor	multiple types: see schema	No	Read Write	
rel	multiple types: see schema	No	Read Write	
eps	multiple types: see schema	No	Read Write	
di	multiple types: see schema	No	Read Write	

cn	array: see schema	Yes	Read Write	Indicates an array of connection types that trigger an attempt to connect to the Enroller to start.
----	-------------------	-----	------------	---

A.3.6 CRUDN behaviour

Table A.5 defines the CRUDN operations that are supported on the "oic.r.easysetup, oic.wk.col" Resource Type.

Table A.5 – The CRUDN operations of the Resource with type "rt" = "oic.r.easysetup, oic.wk.col".

A.4 Wi-Fi Configuration

A.4.1 Introduction

WiFiConf Resource stores essential information to help an unboxing Device connect to an existing Wi-Fi AP.

A.4.2 Example URI

/WiFiConfResURI

A.4.3 Resource type

The Resource Type is defined as: "oic.r.wificonf".

A.4.4 OpenAPI 2.0 definition

A.4.5 Property definition

Table A.6 defines the Properties that are part of the "oic.r.wificonf" Resource Type.

Table A.6 – The Property definitions of the Resource with type "rt" = "oic.r.wificonf".

Property name	Value type	Mandatory	Access mode	Description
if	array: see schema	No	Read Only	The OCF Interfaces supported by this Resource.
cd	string	No	Read Write	Indicates credential information of Wi-Fi AP.
wat	string	Yes	Read Write	Indicates Wi-Fi Auth Type.
swat	array: see schema	Yes	Read Only	Indicates supported Wi-Fi Auth types. It can be multiple.
tnn	string	Yes	Read Write	Indicates Target Network Name (SSID of Wi-Fi AP).
wet	string	Yes	Read Write	Indicates Wi-Fi Encryption Type.
id	multiple types: see schema	No	Read Write	
rt	array: see schema	No	Read Only	Resource Type of the Resource.
swmt	array: see schema	Yes	Read Only	Indicates supported Wi-Fi mode types. It can be multiple.
swf	array: see schema	Yes	Read Only	Indicates Supported Wi-Fi frequencies by the Enrollee. Can be multiple. Valid values are ("2.4G", "5G").
n	multiple types: see schema	No	Read Write	
swet	array: see schema	Yes	Read Only	Indicates supported Wi-Fi Encryption

				types. It can be multiple.
wat	multiple types: see schema	Yes	Read Write	Indicates Wi-Fi Auth Type.
cd	string	No	Read Write	Indicates credential information of Wi-Fi AP.
tnn	string	Yes	Read Write	Indicates Target Network Name (SSID of Wi-Fi AP).
wet	multiple types: see schema	Yes	Read Write	Indicates Wi-Fi Encryption Type.

A.4.6 CRUDN behaviour

Table A.7 defines the CRUDN operations that are supported on the "oic.r.wificonf" Resource Type.

Table A.7 – The CRUDN operations of the Resource with type "rt" = "oic.r.wificonf".

A.5 eSIM Easy Setup Collection

A.5.1 Introduction

The eSIMEasySetup Resource Type stores useful information including Remote SIM Provisioning (RSP) status, and RSP last error which was produced in the process of eSIM Easy Setup. Note that the eSIM Easy Setup Resource is a Collection Resource, which contains Links to RSPConf, and RSPCapability Resources and may additionally contain Links to other Resources.

A.5.2 Example URI

[/eSIMEasySetupResURI](#)

A.5.3 Resource type

The Resource Type is defined as: "oic.r.esimeasysetup, oic.wk.col".

A.5.4 OpenAPI 2.0 definition

A.6 Remote SIM Provisioning Capability

A.6.1 Introduction

RSPCapability Resource stores information to help a service provider to provide appropriate cellular plans to an end user.

A.6.2 Example URI

/RSPCapabilityResURI

A.6.3 Resource type

The Resource Type is defined as: "oic.r.rspcapability".

A.6.4 OpenAPI 2.0 definition

```

A.7 RSP Configuration

A.7.1 Introduction

RSPConf Resource stores the information used to download and install an eSIM Profile to an eSIM capable IoT device. It comprises SM-DP+ server FQDN and Activation Code Token binding to a specific subscription as defined by GSMA SGP.22.

A.7.2 Example URI

/RSPConfResURI

A.7.3 Resource type

The Resource Type is defined as: "oic.r.rspconf".

A.7.5 Property definition

Table A.X5 defines the Properties that are part of the "oic.r.rspconf" Resource Type.

Table A.X5 11 – The Property definitions of the Resource with type "rt" = "oic.r.rspconf".

<u>Property name</u>	<u>Value type</u>	<u>Mandatory</u>	<u>Access mode</u>	<u>Description</u>
<u>rt</u>	<u>array: see schema</u>	<u>No</u>	<u>Read Only</u>	<u>The Resource Type.</u>
<u>ac</u>	<u>string</u>	<u>Yes</u>	<u>Read Write</u>	<u>The information needed to provision an eSIM device.</u>
<u>pm</u>	<u>string</u>	<u>No</u>	<u>Read Only</u>	<u>eUICC information used for the eSIM Profile download and installation procedure. Comprises an eSIM Profile package version, spec version number, capabilities supported by the eUICC as defined by GSMA SGP.22. This information is returned from the LPA as ASN.1 DER encoded binary data format, and base64 encoding is used to convert to JSON.</u>
<u>cc</u>	<u>string</u>	<u>Yes</u>	<u>Read Write</u>	<u>A code entered by an end user required by the SM-DP+ to confirm the download and installation of an eSIM Profile. The Confirmation Code is provided from a service provider to the end user.</u>
<u>ccr</u>	<u>boolean</u>	<u>Yes</u>	<u>Read Write</u>	<u>Indicates whether a Confirmation Code is required.</u>
<u>n</u>	<u>multiple types: see schema</u>	<u>No</u>	<u>Read Write</u>	
<u>id</u>	<u>multiple types: see schema</u>	<u>No</u>	<u>Read Write</u>	
<u>if</u>	<u>array: see schema</u>	<u>No</u>	<u>Read Only</u>	<u>The OCF Interface set supported by this Resource.</u>

A.7.6 CRUDN behaviour

Table A.X6 defines the CRUDN operations that are supported on the "oic.r.rspconf" Resource Type.

Table A.X6 12 – The CRUDN operations of the Resource with type "rt" = "oic.r.rspconf".

<u>Create</u>	<u>Read</u>	<u>Update</u>	<u>Delete</u>	<u>Notify</u>
	<u>get</u>	<u>post</u>		<u>observe</u>
