

OP Architecture

- Notes:
- No official figure
 - still somewhat incomplete (e.g. realisation of operation aspects)
 - Application Edge Part on Edge resource should be shown, but overloads figure

EDGEAPP mapping

- Notes:
- For discussion purposes: not to be considered as “official” mapping
 - EES also has functionality that is not part of OP and cannot be mapped
 - E.g. API exposure at the edge (somewhat like an edge-local API GW)
 - 3GPP Edge Mgmt functionality not considered
 - 3GPP working on federation for EDGEAPP
 - ECS not shown, but is supporting functionality that could be mapped to OP or SRM in general
