Helping businesses identify their customers securely and conveniently
A combination of attribute verification and strong authentication

**USE CASE 1: ATTRIBUTE VERIFICATION**
- Leverages user account information held by the operator on their customers (name, address, ...)
- Check against information provided to service provider by the user
- Fulfills regulatory requirement for identity check when registering online

**As of early 2017**
- 27,000 Korean service providers are using T-Authentication
- 13m monthly active users
- 650m transactions annually

**2005**
- SKT launch T-Authentication

**49%**
- of the Korean market enabled

**2017**
- Integrated into Mobile Connect framework
