Technology that you create today will impact not only our generation, but many more to come. If that technology is not built securely and built right, then not only does it impact companies and countries. It also impacts us children, so keep in mind that security has to be in place

$$\text{Security} = f(\text{data})$$

Security should be
directly proportional to
the value of the data

Digital Transformation
is **within our grasp** but
IoT is complex

98%

of Enterprises want end-to-end solutions that protect data from place of collection, to cloud

Zero-Touch Provisioning

Kigen are pleased to introduce...

OPEN IoT SAFE

Principles of open, zero-trust architecture serving OEMs, CSPs and IoT Service Providers

On-board key generation

Taking the next step towards billions of IoT devices

Simple, unified **zero-touch provisioning**

Treating enterprise security credentials with the same level of security as mobile network credentials, by **leveraging tamper-resistant hardware**

Removing barriers to access hardware-based security to better protect credentials

Using **open systems**, based upon standards and without complex integration

Open IoT SAFE Ecosystem
