

Increasing access to energy, India OMC Power (in partnership with Bharti Infratel)

OMC Power builds Micropower Plants with renewable energy sources in areas where there is no reliable power grid. Tower company Bharti Infratel has entered a 10-year partnership with OMC Power to power its off-grid and poor grid telecom tower sites in rural areas. Micropower enables mobile operators to power their towers renewably, and also benefits rural households in the local community by supplying them with electricity – resulting in a substantial reduction of CO2 emissions by cutting diesel and kerosene dependence.
