

# Mobile channels for utility services

<p><b>Mobile infrastructure</b></p> <p>The telecom tower acts as the anchor load for the energy service company (ESCO) that also supplies energy to surrounding communities via a microgrid and/or energy hub model.</p>	<p><b>Sales, distribution and branding</b></p> <p>The extensive footprint of mobile network operators' (MNOs') sales and distribution channels together with their recognisable and trusted brand can be leveraged to reach underserved customers with energy, water and sanitation solutions.</p>	<p><b>Machine-to-machine (M2M) connectivity</b></p> <p>Smart metering and monitoring of utility systems over GSM networks improves their lifetime and efficiency, triggers more responsive maintenance and repair, and provides insights into customer behaviour. It also enables on/off control of services to customers on a pay-as-you-go (PAYG) arrangement.</p>	<p><b>Mobile payments</b></p> <p>Mobile payments (mobile money services, SMS payments, airtime) can enable the development of PAYG models and other innovative financing schemes. In addition to supporting remote and secure collections, mobile payments are also can also create a digital record of payments, for those without a prior credit history.</p>	<p><b>Mobile services</b></p> <p>Mobile services (voice, SMS, USSD, apps) can be used by communities, village agents, and service providers to report service delivery status, improve field operations, optimise supply chains, or provide customer support.</p>
