With an average distance of 4,100 km between major cities in Africa (compared to 1,300 km in Europe or 2,200 km in North America), logistics can pose significant challenges for businesses. For landlocked countries like Zambia, these challenges are even greater. A recent UNECA report estimated that, on average, transport costs in African landlocked countries account for 77 per cent of the value of their exports. Zambia ranks 118 out of 167 in logistics performance, lagging behind other Southern African counterparts like South Africa or Botswana. This erodes their competitiveness and affects the profitability of small and medium-sized enterprises (SMEs) that have to move goods around the country.

Meanwhile, Zambia’s youth represent almost two-thirds of the working-age population, yet youth unemployment rates are significantly higher than the national average.

To tackle the problem of last-mile logistics while also fighting unemployment, Musanga Logistics launched an on-demand, mobile-based delivery solution that connects independent cyclists, motorbike riders and truck drivers to businesses and individuals in need of last-mile logistics support. Through the platform, merchants can access this fast, low-cost delivery service and get their products delivered within one to three hours in the capital, Lusaka. Merchants can track their inventory/packages via smartphone until they reach the agreed destination. Meanwhile, cyclists, motorbike riders and drivers with smartphones and underutilised assets (bicycles, motorbikes or trucks) can earn additional income on Musanga Logistics online marketplace. Musanga Logistics expects to have over 1,500 trucks registered on its platform by early 2019.

1. A merchant downloads, registers and logs in to the Musanga Logistics platform through their smartphone or mobile-responsive web app.
2. The merchant can immediately see available drivers in real-time.
3. After requesting a delivery, the merchant enters the details of the package: weight, size, item, contact name, merchant location and recipient’s location.
4. The merchant then requests a pick-up service. Musanga’s platform matches the request with available drivers.
5. The driver accepts the delivery job and heads to the pick-up location to collect the package. The merchant can track the driver and the package in real-time.
6. Before heading to the delivery location, the driver initiates contact with the recipient to schedule a delivery window. Once agreed, the driver heads to the recipient’s location. Meanwhile, the merchant can track the driver in real-time via Musanga’s mobile and web app.
7. Once the driver reaches the recipient’s location, they deliver the item(s) and prompt the recipient to pay for the package using mobile money (with MTN Mobile Money currently) or cash and to sign for the package on the driver’s smartphone. The recipient then receives a receipt of the transaction that is visible to the merchant on the app. (Musanga Logistics usually gets merchants to pay for their transaction at the beginning of each month to mitigate the risk of dealing with cash.)
8. Once the transaction is completed, the delivery driver/riider and the merchant can rate the service.

7. Musanga Logistics’ mobile platform connects a network of independent cyclists, riders and drivers to businesses and individuals in need of logistical support. www.musanga.com
8. Musanga Logistics has developed two mobile apps available in both Android and iOS stores. The first one allows merchants to arrange a delivery and track packages in real time through their smartphones. The second one was created for drivers and riders to access and manage delivery requests. This is how the service works:
START-UPS AND MOBILE IN EMERGING MARKETS: INSIGHTS FROM THE GSMA ECOSYSTEM ACCELERATOR

Changing lives

The average Musanga Logistics truck driver, cyclist and motorbike rider earn $432 per week, significantly higher than the average wage of other drivers and riders in Zambia. Musanga Logistics is creating employment opportunities for youth and helping those working in the informal economy become active participants in the formal economy. (The average age of drivers and riders on the platform is 28.) The start-up is also helping to boost the economic productivity of businesses with faster and lower cost deliveries. The solution has already helped businesses/merchants reduce their logistics costs by up to 40 per cent.

Musanga Logistics has reduced average customer delivery time from seven hours to three hours. By making use of a driver/ rider’s underutilised assets, Musanga Logistics has reduced inefficiencies in the supply chain (i.e. half-empty trucks doing most deliveries) and the negative per capita environmental impact while contributing to a more sustainable city.

“I began working with Musanga Logistics in March 2018. Musanga Logistics’ delivery requests are reliable and dependable. It has become my main source of income. So far, I have earned an average of $1,200 monthly. I am relying on my income from Musanga to buy another truck.”

– Kevin Musa, 31, Musanga Logistics driver

“Partnering with Musanga to deliver products to our clients has helped us as a company reduce our cost of delivery and improve on lead time. This has helped the business reduce costs and consequently maximise profits. But ultimately, Musanga Logistics has helped us gain customer confidence by ensuring our products reach customers on time.”

– Emmanuel Mwanza, 23, Shop owner

Working with the GSMA Ecosystem Accelerator

Musanga Logistics received a grant from the GSMA Ecosystem Accelerator Innovation Fund in February 2018 to expand its operations and platform in three cities across Zambia. The end goal is to empower microentrepreneurs (drivers, riders) who will in turn support local small businesses and shops.

By the end of the grant in early 2019, Musanga Logistics plans to have onboarded an additional 600 merchants (small shops and manufacturers) and over 670 drivers and riders. Beyond the funding, GSMA is also supporting Musanga to strengthen its relationship with Zambian mobile operators.

Working with mobile operators

In October 2018, Musanga Logistics signed a mobile money integration partnership with MTN Zambia, the leading mobile operator in the country by customer market share with 5.9 million connections. The MTN Zambia partnership simplifies Musanga’s payment collection and reduces reliance on cash. Cash payments are still the preferred way to pay for deliveries, but it is inherently costly and risky since the payment has to be manually counted, collected, verified, recorded, stored, secured and transported. Beyond providing a payment solution, Musanga’s partnership with MTN will also enable its users and drivers to access mobile financial services, for example, microloans that would allow drivers to purchase fuel ahead of deliveries.

“Partnering with Musanga to deliver products to our clients has helped us as a company reduce our cost of delivery and improve on lead time. This has helped the business reduce costs and consequently maximise profits. But ultimately, Musanga Logistics has helped us gain customer confidence by ensuring our products reach customers on time.”
