Scaling Digital Innovation in Emerging Economies

The impact of GSMA grant funding on start-ups in low- and middle-income countries
The GSMA is a global organisation unifying the mobile ecosystem to discover, develop and deliver innovation foundational to positive business environments and societal change. Our vision is to unlock the full power of connectivity so that people, industry, and society thrive. Representing MNOs and organisations across the mobile ecosystem and adjacent industries, the GSMA delivers for its members across three broad pillars: Connectivity for Good, Industry Services and Solutions, and Outreach. This activity includes advancing policy, tackling today’s biggest societal challenges, underpinning the technology and interoperability that make mobile work, and providing the world’s largest platform to convene the mobile ecosystem at the MWC and M360 series of events. We invite you to find out more at gsma.com

Follow the GSMA on Twitter: @GSMA

This initiative has been funded by UK Aid from the UK Government and is supported by the GSMA and its members.

The views expressed do not necessarily reflect the UK Government’s official policies.

The GSMA Innovation Fund supports innovative digital solutions with positive socio-economic impact in low- and middle-income countries. We believe digital solutions have the power to sustainably reduce inequalities within our world by connecting everyone and everything to a better future.

Foreword

For over a decade, the GSMA Mobile for Development programme has been singularly positioned at the intersection of the mobile ecosystem and the development sector, stimulating digital innovation that can deliver both sustainable businesses and large-scale socio-economic impact for the underserved.

One of the programmes fostering digital innovation is the GSMA Innovation Fund, which provides equity-free grant funding and technical assistance as a means to de-risk innovation and attract follow-on funding. By working in partnership with donors such as ourselves at the UK’s Foreign, Commonwealth and Development Office (FCDO) as well as Australia’s Department for Foreign Affairs and Trade (DFAT), and the Swedish International Development Cooperation Agency (Sida), the GSMA Innovation Fund model leverages public sector funding to stimulate digital innovation and attract private capital. Indeed, our relationship with the GSMA is an important part of the FCDO’s wider efforts to test and scale high-potential technologies and business models for inclusive socioeconomic and climate impact. Helping MSMEs to bridge the finance gap between seed and commercial fundraising has never been so important. Our work with the GSMA on this agenda is core to our ambition to be a catalytic donor in partnership with British International Investment, the UK’s development finance institution.

As of July 2022, the GSMA Innovation Fund has disbursed over £22m in grant funding to over 100 organisations, facilitated over 80 partnerships between these organisations and Mobile Network Operators (MNOs), and the combined reach has delivered life-enhancing solutions to 37 million beneficiaries. In addition, the portfolio organisations have attracted over £650 million in additional investments.

Both the GSMA and the UK FCDO thank the innovative founders and their teams working to develop sustainable business models that drive socio-economic impact, whilst sharing their insights based on their collective learning and experience.

These innovators face a real challenge balancing positive socio-economic and environmental impact with the need for a sustaining their business models in complex economic and political contexts. This is why it is increasingly important that these innovators receive support from investors, who provide the crucial capital to help these start-ups to scale and address the SDGs in a commercially sustainable manner.

David Woolnough,
Deputy Director Research, Technology and Innovation, FCDO
Executive summary

Since 2013, in partnership with the UK Foreign, Commonwealth & Development Office (FCDO) and other donors, the GSMA has supported more than 100 organisations with equity-free grant funding to test and scale innovative digital technologies and business models that boost local ecosystems, improve livelihoods and drive prosperity. Several of these innovative business models have scaled over the years, whether through expansion, additional follow-on funding or strategic partnerships.

This report reflects on the role of the GSMA in providing early-stage risk capital and support for early-stage digital start-ups. For the 21 start-ups featured in this report, their scaling journeys have generated important lessons about raising follow-on funding:

There are several pathways to scale. A start-up’s journey to scale depends on their addressable market and the enablers and barriers within their ecosystem. Whether they are expanding their product/service offering, adding more functions to meet customer needs or replicating their solution in new markets, it is useful to measure scale with specific metrics and over time, at different stages of the journey.

The fundraising journey is a useful way to measure scale in low- and middle-income countries (LMICs). The ability to raise follow-on funding demonstrates that investors believe a solution has early traction and is based on a sustainable and scalable business model. It is also a strong indication that catalytic funding can help unlock further investment.

A combination of funding and technical assistance has supported start-ups on their journey to scale. The GSMA Mobile for Development team has provided start-ups with funding and technical assistance that has included navigating MNO ecosystems, networking and investor outreach and business and operational support.

Digital start-ups in LMICs face distinct challenges pioneering innovative business models in complex economic environments. Start-ups focused on impact-driven value creation in LMICs are often among the first to enter and develop a customer base in traditionally under-resourced sectors and markets. Success in such complex environments requires overcoming political instability, infrastructure challenges and a nascent digital ecosystem.

Partnerships can be the key to scaling. Financial support and sector traits aside, successful scaling can be the result of a start-up’s ability to pivot their business model and establish strategic partnerships. These partnerships can provide value to both partners, as MNOs have reached the level of scale start-ups require while start-ups have the local innovation that MNOs need.
1 Introduction
1.1 Objectives

This report begins by outlining different pathways to scale in low- and middle-income countries and how scale should be measured. Five important factors influencing scale are highlighted, and special attention is given to understanding the gender financing gap for digital start-ups.

Chapter 2 analyses the journeys to scale of 21 start-ups supported by the Digital Utilities Innovation Fund (previously known as the Mobile for Development Utilities Innovation Fund) from 2013 to 2020, the Ecosystem Accelerator Innovation Fund from 2016 to 2020 and one round of the Mobile for Humanitarian Innovation Fund from 2018 to 2019. The findings of this report focus on the experience of these selected start-ups and do not reflect all start-ups and organisations in the GSMA Mobile for Development portfolio.

Chapter 3 reveals the lessons that start-up founders learned while scaling their solutions. This includes the sectoral enablers and barriers they encountered and the investors who supported them at different stages.

Finally, the report shares recommendations for key ecosystem stakeholders, including start-ups, investors, funding organisations, accelerators and tech hubs. For start-ups in LMICs to have financial and social impact at scale, all these stakeholders will need to intensify and align their efforts and collaborate.

The research methodology included desk research and key informant interviews (KIIs) accompanied by analysis and synthesis. The desk research covered an array of publicly available start-up and investor databases, public articles, existing literature, trade publications and past GSMA reports. KIIs were conducted with GSMA staff responsible for managing the grants, as well as selected start-ups and industry-leading experts from relevant start-up and investment markets in LMICs. Where possible, profile data was supplemented with publicly available information from Crunchbase, PitchBook, the companies’ own websites, press releases, news articles and other sources.

1.2 Definitions

In this report, the following definitions apply:

**Start-up:** an organisation developing a business model that is repeatable and scalable. This distinguishes start-ups from other companies, which are assumed to already have a repeatable and scalable business model.\(^1\) As a result, the type of investment and support that a start-up requires is different from other organisations.

**Scalability:** a company’s ability to rapidly grow its business without encountering resource constraints.

**Seed stage start-up:** at this stage, a new venture has moved beyond the ideation stage and begins seeking funding support for their concept or product from friends, family and angel investors.\(^2\) This stage often involves finalising the product or service offering and gathering market data.

**Early-stage start-up:** at this stage (before raising Series A funding), the start-up has a potentially scalable idea for a product or service targeting a market that is poised to generate value.\(^3\) An early-stage start-up has a prototype or minimum viable product (MVP) and might be generating revenue but is not yet profitable.

**Market leader:** a company with the largest market share in an industry that can often use its dominance to affect the competitive landscape and direction the market takes. It may also surpass its competitors in brand loyalty, perceived value, distribution coverage and profit.\(^4\)

**Non-equity funding:** all forms of funding where the investor or funder does not have any ownership or shares in the start-up. Examples include catalytic grant funding and traditional debt or loans (not to be confused with convertible notes that are commonly converted into equity).

---

1. As defined by Steve Blank, US entrepreneur, and adjunct professor of entrepreneurship at Stanford University.\(^5\)
2. Launchopedia by FundingSage. (n.d.). “Seed Stage – Startup Funding Life Cycle”.
Equity funding: all forms of funding where the investor or funder takes an ownership or equity share (preferred and/or common shares) of the start-up in exchange for funding, such as angel investment (including convertible debt) and venture capital (VC) investment.

Start-up ecosystem: the start-up ecosystem consists of start-ups, corporates, funding providers (including donors, venture capitalists, angel investors and others), universities and tech hubs, such as incubators and accelerators.

1.3 Understanding scale in LMICs

Pathways to scale

Each of the scaling journeys in this report tells the story of how an innovation (an idea that solves a problem and brings new value) balances the challenges of expanding, adapting, replicating and sustaining to achieve maximum socio-economic impact. These pathways to scale are illustrated in Figure 1.

Given that there is more than one way to scale, there should be more than one way to measure scale, particularly since the addressable market and context differ for each start-up. Therefore, it is advisable to understand the contextual constraints in which start-ups operate, as this will impact their ability to scale.

Measuring scale

The Wheeler Institute report, Africa Fintech: Scale Prevalence, took the first step towards implementing a data-centric approach to the challenges of scale and investigating the factors impacting scale. This extensive report examined 716 FinTechs across Africa and found that, according to the definition used by the Wheeler Institute, only 37 or just over 5% had scaled.

The Wheeler Institute defines scale using four metrics: number of end users, annual revenue, number of employees and cumulative funds raised. Their report measured scale prevalence in absolute figures (such as total funding) rather than measuring the scalability of individual start-ups based on relative performance (such as a start-up’s fundraising journey over time).

When analysing the scaling journeys of a smaller sample of start-ups, as in this report, it is more useful to consider funds raised over time rather than a cumulative fundraising total. This is because analysing a start-up’s scaling journey over time provides the opportunity to glean insights from each step.

To measure scale in LMIC start-ups, it is helpful to delve more deeply into the four metrics outlined by the Wheeler Institute. This report focuses on just one of these metrics – cumulative funds raised – and studies it by tracking the fundraising journeys of selected start-ups in LMICs across Africa and Southeast Asia, and in several sectors.

Fundamentals of scaling

Regardless of the stage in a start-up’s journey, there are five important factors that influence a start-up’s scaling journey in LMICs.

1. Business model scalability: the pace and capacity for scale depends on a start-up’s business model and targeted user segments. A company whose business model is unable to scale quickly will likely be outpaced by its competitors, while a business model that scales efficiently will be able to grow rapidly and become a market leader in its industry.

2. Use of funds is just as important as raising funds: raising funds is not a guarantee of success, as many start-ups still fail after raising funding. It is important to evaluate how capital was deployed to better understand how funds were used.

3. Ecosystem enablers: the potential to scale depends on several enabling factors, including economic readiness, regulation, digital infrastructure, digital talent and available investment and support. Although it is difficult to calculate, regulation will likely become more complex as efforts ramp up to regulate tech start-ups. More information about these enablers in the ASEAN context can be found here.

4. Applying a gender lens: it is crucial to understand where and why gender financing gaps occur, and this involves looking at the gender disparities in workload and household burdens and other socio-economic gaps.

5. Use relevant KPIs at the right stage: tech start-ups are expected to grow rapidly, which means the metrics for measuring success will change as the start-up scales. Therefore, different key performance indicators (KPIs) should be prioritised by start-ups at each stage of their scaling journey.

1.4 Considering the gender financing gap

Global funding trends for female founders

Given that this report examines the fundraising journey over time, it is important to recognise that start-ups run by men receive more funding than start-ups run by women. This is known as the “gender financing gap” and is illustrated in Figure 2. The fundraising challenges that a founder faces will affect their overall ability to scale and ultimately impact their revenue, number of employees and end users.

It is crucial for funding institutions and investors to understand the global and local context of the gender financing gap, as this will help them identify where to focus their financial and technical support. It is also important for start-up founders to understand this financing gap to better prepare for their fundraising journey and identify the best types of financing and funders. Armed with an understanding of the gender financing gap, female founders can leverage their communities and support networks to identify the right funders to approach.

Venture capital funding for female founders

Venture capital funding has rapidly increased overall in recent years, but not at the same pace for female founders. According to The Big Deal, fewer than 1% of funding in Africa went to start-ups founded by a woman or all-women teams. The primary source of capital for these ventures is angel investment. According to Deal Street Asia’s latest report, female founders and co-founders in

---

Southeast Asia received $4.43 billion in funding in 2021, accounting for 17.2% of all private capital raised that year (an increase from 16.5% in 2020). As of 2020, only 20% of venture-backed start-ups in ASEAN have at least one female founder.

Understanding the gender financing gap

To properly assess the gender financing gap and take steps to close it, statistics are not enough. The reasons for the gender financing gap need to be understood by looking at the nuances and barriers at the root of the problem. This will be highlighted later in a case study of Sehat Kahani, a HealthTech start-up in Pakistan with two female co-founders.

Reasons for the gender financing gap include:

— Gender bias: It is well-documented that women entrepreneurs often face gender bias from investors, who are more likely to invest in a company if they share similar characteristics (such as gender or age). Global banking giant HSBC estimated that a third of female entrepreneurs globally face gender bias when raising funds. Additionally, women in many LMIC markets are often not encouraged to pursue entrepreneurship as a career path, which can lead them to start their businesses with less capital and fewer resources.

— Perceptions of different risk profiles: A Harvard Business Review article noted that women are still perceived as more risk averse than men, which puts them at a disadvantage when they approach investors. Another
article¹⁰ looked at how men and women process risk and reward differently in their decision-making,¹² stating that men are perceived to take more risks under stress than women. The article concludes that women are still at a disadvantage as a result of this perception and bias.

— **Similarity breeds connection:** Homophily, the tendency for people to seek out or be attracted to those similar to themselves, also contributes to the gender gap. In a joint World Economic Forum and Wharton School programme, management professor Ethan Mollick stated: “People like people like themselves. VCs tend to be mostly male; they have friend networks that are mostly male. As a result, you have a very strong network of men who talk to each other, and it’s very hard for a woman to get access to these people.”¹³

The **ability to raise funding**, especially commercial funding, is a very **useful measurement of scale** for start-ups in LMICs. It demonstrates that investors are convinced a solution has early traction and is based on a sustainable and scalable business model. This is explored in the following section.

The fundraising journeys of start-ups in the GSMA Innovation Fund portfolio
2.1. Fundraising journeys of start-ups

The following snapshots of 21 start-ups in the GSMA portfolio are grouped by sector and focus on one metric – **fundraising** – which is evaluated over time.

**Founder:** Francis Obirikorang
**Founder:** Michael K. Ocansey

- **Raised $650k** to scale operations
- **Raised $500k** from Seedstars for product development and user acquisition
- **Raised $200k** through GSMA (FCDO) to develop and scale financial platform solution
- **Received £50k** from GSMA (FCDO) and raised over **$700k** through Shell Foundation, Rabo Foundation, FDO, and AV Ventures to develop farmer inclusion programmes
- **Raised $1.16m** through Northstar to develop product and acquire users
- **Received £183k** from GSMA (FCDO and DFAT) to add more features to their service and conduct a pilot project
- **Received $15m** through SoftBank to revamp business distribution into 3 areas: fish, shrimp and fisheries
- **Raised $90m** through Sequoia Capital India, Sequoia Capital and others
- **Raised $50k** through Go Ventures for market expansion
- **Raised just under $4m** through 500 Start-ups and others

As of January 2020, AgroCenta has reached over 3,500 smallholder farmers through the AgroPay platform and over 36,200 farmers are active users on the platform.

### SECTOR

AgriTech (aquaponics) Founded 2013 Indonesia

- **FOUNDER(S)**
  - Gibran Huzaifah
  - Chrisna Aditya

- **PROFILE**
  - IoT-based aquaculture company serving fish and shrimp farmers to reduce inequalities

- **KEY PRODUCTS**
  - Fish farming software platform and ecosystem for fish and shrimp cultivators, buyers and consumers

- **GENDER IMPACT**
  - Farmers in Indonesia’s aquaculture market are 94.3% male and 5.7% female

**Raised $1.16m through Northstar to develop product and acquire users**

**Raised $50k through Go Ventures for market expansion**

**Received £183k from GSMA (FCDO and DFAT) to add more features to their service and conduct a pilot project**

**Raised $90m through Sequoia Capital India, Sequoia Capital and others**

As of January 2020, eFishery has worked with more than 23,000 fish and shrimp ponds across Indonesia. On average, fish farmers using the eFishery solution have increased profits by over 20%.
**SECTOR**
AgriTech

**Founded 2013**
Kenya

**FOUNDER(S)**
Samir Ibrahim

**PROFILE**
Provides solar-powered drip irrigation systems to support farmers’ growth in an accessible, energy-efficient and sustainable way

**KEY PRODUCTS**
ClimateSmart Direct, ClimateSmart Battery + TV, RainMaker2C Kubwa, RainMaker2 with ClimateSmart Battery

**GENDER IMPACT**
50% female employees

---

**SECTOR**
AgriTech

**Founded 2013**

**GENDER IMPACT**
50% female employees

---

**Raised $14m** Series A round through Energy Access Ventures, Électricité de France, Acumen Capital Finance Partners and others

**Raised $11m** debt financing through SunFunder to expand solar-powered irrigation across Africa

**Received $100k** grant from GSMA (FCDO) to develop, trial and set up Rain Maker, an affordable PAYG solar-powered irrigation solution

Over 26% of SunCulture’s customers switched from diesel-generated water pumps to using the solar pump as their main source of irrigation, while 70% of customers use the pump to get their household water supply.

**Raised $14m** Series A through Energy Access Ventures, Électricité de France, Acumen Capital Finance Partners and others

**Raised $11m** debt financing through SunFunder to expand solar-powered irrigation across Africa

**Raised $14m** through Omidyar Network, 1776, Wamda and DOB Equity to acquire vendors and expand product portfolio

**Raised $10m** through TLcom, IFC, Wamda, 1776 and DOB to expand operations and offer new services

Raised $30m** through Goldman Sachs, IFC, TLcom, Creadev, OPIC and AlphaMundi to expand service offering

Raised $58m through Creadev, TLcom, IFC, DOB, Juven, Finnfund and Endeavor for proof of concept

**Total fundraising**
$25m+

**Total fundraising**
$25m+

**Total fundraising**
$150m+

Twiga Foods expanded to 1,000 employees in 2021, quadrupled its revenues between April 2020 and August 2021, and launched operations in Uganda at the end of 2022.
### Qlue
- **SECTOR:** CivicTech
- **FOUNDER(S):** Rama Raditya
- **BUSINESS MODEL:** B2G SaaS – licensing for governments
- **PROFILE:** Hardware and software smart-city solution for governments and citizens
- **KEY PRODUCTS:** Smart enterprise for governments; smart city app for citizens
- **GENDER IMPACT:** Female company president
- **PROFILE:** Providing mobile and ticketing services that allow authorities to track tax payments from MSMEs
- **KEY PRODUCTS:** TownPay; TTS-Trans; TTS-Event; TTS-Market
- **GENDER IMPACT:** During the GSMA grant period, one-third of registered users were women

#### Funding Highlights
- **2014:** Received funding from Google Launchpad Accelerator for pilot test, product development and implementation.
- **2016:** Raised $1m from MDI Ventures and GDP Ventures to focus on IoT and AI solutions.
- **2017:** Raised Series B funding through Global Brain Corporation to expand into foreign markets.
- **2018:** Received £156k from GSMA (FCDO and DFAT) for sector expansion.
- **2021:** Raised $1m from MDI Ventures and GDP Ventures to focus on IoT and AI solutions.

*As of January 2020, Qlue has channelled more than 1 million reports from over 640,000 registered app users across Indonesia.*

---

### Sudpay
- **SECTOR:** CivicTech
- **FOUNDER(S):** Samba Sow, Pathé Faye
- **BUSINESS MODEL:** B2B and B2G SaaS
- **PROFILE:** Providing mobile and ticketing services that allow authorities to track tax payments from MSMEs
- **KEY PRODUCTS:** TownPay; TTS-Trans; TTS-Event; TTS-Market
- **GENDER IMPACT:** During the GSMA grant period, one-third of registered users were women

#### Funding Highlights
- **2014:** Used early equity capital of $165k
- **2014:** Received a prize of $100k from Orange Ventures
- **2020:** Received grant of £250k from GSMA (FCDO) to set up and roll out TownPay in several municipalities of Dakar

*As of January 2020, nine municipalities have signed up for the service. More than 24,000 merchants have been enrolled since April 2018 and more than half have already paid their taxes using the solution since tax collection started in late June 2018.*
**Scaling Digital Innovation in Emerging Economies**

**BUSINESS MODEL**

B2C SaaS – daily, weekly, monthly and quarterly fees; expanding into B2B and B2G annual agreements

**GENDER IMPACT**

Female founder and female CFO

**PROFILE**

EdTech providing curriculum in all subjects for primary and secondary learners on any device

**KEY PRODUCTS**

e-learning platform; Virtual tutor via SMS and web

**FOUNDER(S)**

Wambura Kimunyu

**SECTOR**

EdTech

**Founded** 2011

- Côte d’Ivoire
- Kenya

**EDTECH**

As of March 2020, Eneza had increased the number of users on the platform in Côte d’Ivoire to 27,545. The start-up has successfully integrated literacy education with IVR and improved the service through distance learning via SMS.

**KEY PRODUCTS**

Kurus Ruangguru / Dafr Lulu 12 / Roboguru / Brain Academy / Skills Academy

**SECTOR**

EdTech

**Founded** 2014

- Indonesia

**FOUNDER(S)**

Adamas Belva Syah Devara

Mohammed Usman

**GENDER IMPACT**

More than 30% of their users are female

**BUSINESS MODEL**

B2C course packages SaaS + revenue share

**PROFILE**

EdTech platform to pair students with tutors + educational materials

**EDTECH**

In December 2020, Ruangguru had served more than 22 million users in Indonesia. In 2020 they also launched the Ruangguru Free Online School, used by more than 10 million students, and they opened 250 teacher training modules.

**EDTECH**

In December 2020, Ruangguru had served more than 22 million users in Indonesia. In 2020 they also launched the Ruangguru Free Online School, used by more than 10 million students, and they opened 250 teacher training modules.
**ENERGY**

**SECTOR**
Utilities (energy)

**FOUNDER(S)**
Sandeep Giri

**PROFILE**
Solar-powered tech distributor (water pumps and grids)

**BUSINESS MODEL**
B2G/B2B hardware sales, moving to SaaS

**KEY PRODUCTS**
Solar pump; SaaS-based platform

**GENDER IMPACT**
10% female employees

---

As of December 2022, Gham Power has impacted 16,475 lives and curbed 2,830 tonnes of carbon dioxide. In 2022, they launched a multi-year research project with UK Innovate called GRIPS, to increase the reliability of clean energy supply.

---

**SECTOR**
Utilities (energy)

**FOUNDER(S)**
Andron Mendes
Sebastian Rodriguez

**PROFILE**
Designs, manufactures, and distributes LPG gas canisters for clean cooking

**BUSINESS MODEL**
Direct-to-customer business models via smart meters and PAYG

**KEY PRODUCTS**
Smart meter device on top of cylinder

**GENDER IMPACT**
Clean cooking solutions significantly benefit majority female users

---

The $25m acquisition in January 2020 gave Circle Gas access to KOPAGAS’s trademarked Pay-as-you-go (PAYG) Liquefied Petroleum Gas (LPG). As of 2020, KOPAGAS has now connected 1,300 low-income households to LPG-fueled clean cooking, impacting 6,500 lives.
Scaling Digital Innovation in Emerging Economies

**BUSINESS MODEL**
- Selling SHS to household consumers and PAYG for usage
- B2C – SaaS; battery financing; remote battery monitoring; leasing with PAYG

**GENDER IMPACT**
- Women in particular benefit from Lumos’ reliable energy as less time and effort is needed for household tasks

**PROFILE**
- Market-leading provider of high-quality solar home systems (SHS)
- Peer-to-peer solar energy trading platforms based on distributed ledger technology

**KEY PRODUCTS**
- Lumos Eco
- Lumos Prime – SHS (solar panels and battery)
- Peer-to-peer microgrids consist of the SOLbox (meter), the SOLapp (customer portfolio management) and the SOLweb (systems analysis)

**FOUNDER(S)**
- Davidi Vortman
- Ron Margalit
- Daniel Ciganovic
- Sebastian Groh

**SECTOR**
- Utilities (energy)
- Founded 2014

**Nigeria**

**Bangladesh**

**FOUNDER(S)**
- Founded 2014

**SECTOR**
- Utilities (energy)

**PROFILE**
- 38% women employees
- 2020

**U.S.$150m+**
- Total fundraising

**2014**
- Received £200k in grant funding from GSMA (FCDO) and another grant from the Israeli Government for product development

**2015**
- Raised over $15m from OPIC Commitment for product development

**2017**
- Raised over $90m from various VCs for technology development

**2020**
- Raised over $35m through DFC (OPIC), FMO, and others to expand in Nigeria, Côte d’Ivoire and develop products

**2014**
- Received a £134k grant from GSMA (FCDO) for product development

**2015**
- Received £200k in grant funding from GSMA (FCDO) and another grant from the Israeli Government for product development

**2018**
- Received $1.75m from IIX Impact Partners Innogy New Ventures, and EDP Ventures

**2019**
- Received investments and prize money totalling $1.6m from EIT InnoEnergy, Sangam Ventures

**2020**
- Won $600k prize money from Zayed Sustainability to build more charging stations

**2021**
- SolShare activated their 100th grid. EV charging launched with 6 EV charging stations solar rooftop project, and they received £300,000 financial support from FCDO.
For **VITALITE**:
- **SECTOR**: Utilities (energy)
- **FOUNDER(S)**: John Fay, Sam Bell, Mike Matokwani

Access to water ATMs helps alleviate the burden of water collection for women and girls who bear the brunt of this labour

**Beyond scaling in Dhaka to over 150 systems and growing its partnership with Dhaka WASA, Drinkwell received support from the World Bank and Imagine H2O to pilot its model in Chittagong. Drinkwell secured a commitment of 100+ community-scale water ATMs with the utility.**
2.2. The catalytic role of the GSMA

2.2.1. Grant funding

As mentioned earlier, one of the fundamentals of scaling is that the use of funds is just as important as raising funds. Figure 3 shows the various ways the 21 featured portfolio start-ups used their grant funding.

2.2.2 Beyond funding: technical assistance, partnerships, and events

The catalytic funding and support provided by the GSMA has helped start-ups de-risk their projects and use these resources to build, test and iterate new business models, which ultimately unlocked additional funding. Now, there are early indications of scale, such as paying customers and product adoption. Support from the GSMA has also helped start-ups craft a better value proposition for the market and potential partnerships with MNOs and other key stakeholders.

To help start-ups build the knowledge, experience and relationships critical to growth and future funding, the GSMA paired financial backing is paired with other types of assistance, such as advisory support and mentorship. This support was tailored to the start-up’s unique circumstances and market requirements. In general, GSMA technical assistance falls into three categories:

1. Navigating MNO business ecosystems and establishing MNO partnerships

Once start-ups understand the value of collaborating with an MNO, they can begin pursuing a partnership. Securing a partnership is a powerful indication that a start-up has a strong value proposition for the market and the ability to attract additional funding, which creates a positive network effect. Strategic partnerships can boost the reputation of a start-up among funders and investors, and potential partners will evaluate a start-up based on previous funding, creating a virtuous cycle of growth.
Partnerships with MNOs allow better market access, which in turn enable start-ups to generate more revenue from their core business. In some cases (such as Qlue and Telkom Indonesia), MNOs have also invested directly in their start-up partner. Table 1 describes the MNO partnerships forged with the start-ups in this report.

Securing an MNO partnership is not easily accomplished. One challenge is the time it takes to establish successful relationships due to high levels of bureaucracy at MNOs. There are also often conflicting visions and strategies, as MNOs may consider a start-up’s approach too risky. While it can be difficult to engage with MNOs, and it is not always clear where the synergies are, it is evident that securing a partnership is an important enabler of scale as it gives start-ups access to a large customer base, universal communication channels and relevant payment infrastructure. These and other benefits are explored in this report.

2. Networking and investor outreach

One activity that has been particularly valuable for start-ups is the hosting of live events. Convening portfolio start-ups and MNOs in joint planning exercises and workshops allows them to deepen and strengthen connections that lead to follow-up discussions and potential investment or partnerships. These in-person events also help to build trust and credibility, as demonstrated in the following examples.

— **Sehat Kahani** shared that the GSMA grant helped them access additional funding by networking with several partners and access opportunities they had previously been unaware of. The GSMA-funded project was an endorsement of their work, which gave them credibility with other investors and international organisations.

— **Agrocenta** noted that the GSMA grant helped them unlock additional funding from the Alliance for a Green Revolution in Africa (AGRA) to grow their AgroPay platform.

— The **eFishery** team said the GSMA seed funding helped them gain traction and develop a more robust solution, and GSMA’s endorsement helped attract new investors. In 2020, the team announced their Series B round of funding.

### Figure 3
How GSMA portfolio start-ups used their grant funding

- Launch and develop product/service offering
- Establish brand and improve marketing
- Acquire new users and drive sales
- Partner with MNOs and other strategic players
- Expand operations into new markets
- Integrate with digital payment infrastructure
- Recruit and retain talent
- Purchase and install hardware
### MNO partnerships with GSMA portfolio start-ups

<table>
<thead>
<tr>
<th>Start-up</th>
<th>Description</th>
<th>MNO partnership</th>
</tr>
</thead>
<tbody>
<tr>
<td>Drinkwell</td>
<td>Provides safe drinking water via mobile-enabled water ATMs</td>
<td>Drinkwell uses MNO Robi’s service to remotely monitor staff using SIM-enabled location tracking services. Reported errors with the water ATMs are then assigned to service engineers in the vicinity, rather than calling each one to check their availability and proximity to the ATM. This has reduced response times by approximately 20 minutes.</td>
</tr>
<tr>
<td>eFishery</td>
<td>Provides IoT-based smart fish feeding machines for commercial aquaculture</td>
<td>eFishery partnered with Indonesia’s largest MNO, Telkomsel, through the Telkomsel Innovation Center (TINC). Through the TINC, Telkomsel and eFishery are developing narrowband-IoT (NB-IoT) devices for the aquaculture sector. Each smart feeder requires a SIM card and internet access to perform all its functions.</td>
</tr>
<tr>
<td>Ensibuuko</td>
<td>Mobile money and cloud solution that helps SACCOs mobilise and manage savings to offer credit efficiently</td>
<td>Ensibuuko has a partnership with Airtel Uganda and MTN Uganda. Airtel provides a discounted mobile data package to Ensibuuko’s SACCOs/VSLAs to ensure their Mobis cloud platform is always connected to the internet. Ensibuuko also integrated with Airtel’s mobile money API to allow their users to make payments and withdrawals using their mobile money accounts. In 2018, Ensibuuko partnered with MTN Uganda Mobile Money to allow SACCO/VSLA managers to disburse loans to members and enable users to make loan repayments through the Mobis platform. By leveraging mobile money, Ensibuuko has reduced the time it takes users to make a deposit to their SACCO/VSLA by up to 50%.</td>
</tr>
<tr>
<td>Gham Power</td>
<td>Solar start-up that installs and maintains solar microgrids and commercial off-grid systems</td>
<td>Ncell supported Gham Power by investing in the installation of new telecom towers with 2G connectivity near microgrid installations in Harkapur and Chyasmitar. Ncell signed a power purchase agreement (PPA) with Gham Power for the microgrid to supply energy to two telecom towers in these communities. This PPA between an off-grid energy service provider and a telecom operator was the first of its kind in Nepal.</td>
</tr>
<tr>
<td>Lumos</td>
<td>Mobile-enabled solar home systems providing PAYG solar</td>
<td>MTN Mobile Electricity, an MTN and Lumos co-branded service, offers off-grid customers in Nigeria energy-as-a-service via solar home systems. This PAYG model is enabled by using airtime credit and GSM-based machine-to-machine (M2M) connectivity to remotely control and monitor SHS usage, billing and performance.</td>
</tr>
<tr>
<td>Ruangguru</td>
<td>EdTech platform pairing students and teachers with content tailored to the national curriculum</td>
<td>In 2017, Ruangguru partnered with Telkom Indonesia. Telkom agents promote Ruangguru products through the operator’s marketing channels (call centres and door-to-door sales). Ruangguru then partnered with Telkomsel’s prepaid youth brand, Loop, to launch a campaign giving users 1GB of data and 2GB of free data to access Ruangguru’s educational content on the web and mobile. Ruangguru has also begun feeding their content into Telkomsel Loop’s educational portal, Ensiklopedia.</td>
</tr>
</tbody>
</table>
In 2011, EdTech start-up Eneza Education launched in Kenya, using familiar and low-cost APIs to build an online education ecosystem. Eneza uses USSD and SMS technology, which are available to students using basic mobile phones. Using MNO messaging APIs to leverage these low-cost technologies helped Eneza expand into five African countries. These partnerships are a win-win for Eneza and MNOs, which can use existing mobile technology that can give them a wide reach, enabling faster market launches compared to other, more complex mobile technology services.

Timeline of Eneza Education’s expansion into five African countries

2016
In 2016, Eneza partnered with Safaricom in Kenya, launching their service Shupavu.

2017
Through a partnership with MTN, Eneza launched operations in Ghana and partnered with Airtel Tigo later that year.

2018
Eneza received a grant from the GSMA to expand their solution to Côte d’Ivoire, improving platform quality, raising awareness through a rewards system and creating content and an interactive voice response (IVR) channel. The GSMA also assisted Eneza in their engagement with MTN Côte d’Ivoire.

2020
By the end of the GSMA grant in March 2020, Eneza had increased the number of users on their platform, successfully integrated literacy education with IVR and improved the service with distance learning via SMS. Eneza also launched their service in Rwanda in 2020 in partnership with MTN and Airtel Tigo.

2022
Eneza partnered with Africell in Sierra Leone, their fifth market. Africell and Eneza Education are piloting TeachMi, a digital tool that expands access to primary and secondary students in Sierra Leone.
Eneza Education indicated that the GSMA’s catalytic grant not only provided the financial impetus to develop their product and grow their business, but also the credibility and global brand association they needed to attract other investors.

oDoc’s team said that the GSMA grant helped them build credibility and that being associated with the GSMA brand helped open discussions with institutional investors ahead of their Series A funding round. The GSMA also supported them with due diligence questions from potential funders.

In interviews, start-ups reported gaining valuable knowledge and experience from the grants, which they can transfer to the next stages of their projects and future initiatives. These lessons came from informal exchange, sense checking and ad hoc mentoring from the GSMA team, as well as exchanges with other start-ups at bootcamps and clinics.

3. Business and operational support

The GSMA has provided a range of assistance to improve start-ups’ products, business models and communication strategies, and make them more innovative and relevant to the market. Examples include project management, product development, business modelling, providing statistics, as well as advising start-ups on regulations, go-to-market strategy, connecting and assisting in negotiation with MNOs and reviewing pitch decks for external fundraising.

Due diligence conducted in the pre-grant stage and subsequent support from the GSMA have helped the start-ups prepare to scale. Particularly important was the GSMA’s emphasis on creating a financially sustainable and/or scalable business model and monitoring it by tracking KPIs – both of which are key to raising additional funds and demonstrating commercial viability to potential buyers and partners.

In addition to grant funding, the GSMA provided tailored technical assistance to help start-ups develop their business models. Examples of this assistance included:

- **Marketing:** Several start-ups received support from an external expert to help them market their service effectively (improved branding, marketing tools, etc.).

- **Technical support:** Several start-ups received advice on mobile technologies, such as IoT. For example, support was provided to aquaponics start-up eFishery in Indonesia to conduct an NB-IoT pilot project with MNO Telkomsel.

- **Management support:** Where necessary, support included strategy reviews, technical and product roadmap discussions, advice for team management, priority setting and leadership, as well as advising senior management on how to better understand their team’s strengths to identify blind spots and improve alignment.

- **Capacity building:** Insights from across the Mobile for Development programme, such as MNO-start-up collaboration and mobile money integration, were provided through a variety of capacity building sessions, including webinars, online clinics, grantee workshops and bootcamps. This capacity building has helped start-ups better understand and articulate their value proposition to MNOs and other investors.
3 Fundraising insights
3.1 Ecosystem enablers and barriers for GSMA portfolio start-ups

When considering the fundraising journeys of the start-ups, it is important to understand the context in which they operate, specifically, the unique challenges for each sector and the impact of the COVID-19 pandemic on their operations. Figure 5 summarises the key enablers and barriers for the 21 start-ups divided by sector.

Several portfolio start-ups were early movers in developing a customer base in traditionally under-resourced sectors and markets (such as Mali and Benin), as they continue to balance impact-driven value creation with commercial interests. These start-ups focus on serving historically underprivileged consumer segments, such as rural communities. To operate successfully in such challenging environments, start-ups must overcome political instability, infrastructure issues (such as unreliable power grids and connectivity) and nascent local digital ecosystems.

They also face other challenges inherent to being a first mover in an emerging market, including:

- **Creating consumer awareness:** Increasing consumer awareness of, and demand for, a new digital innovation can be challenging, such as SolShare’s smart peer-to-peer solar-sharing grids or the PAYG apps for utilities used by KopaGas (acquired by Circle Gas). More effort was required to help certain consumer segments understand the need to pay for certain solutions and services.

- **Dealing with negative investor bias:** Investor and public sector bias towards funding innovative start-up projects in untapped sectors is common. There is a wide disparity in investor appetite depending on the sector. For example, FinTech start-ups have found it easier to partner with large banks due to the accelerated digitisation of financial services. In contrast, digital utilities start-ups often face difficulties securing VC funding due to perceived market, product and consumer segment risks.

- **Convincing MNO partners:** Persuading MNOs to partner in an unproven commercial segment (e.g., sanitation) can be a difficult task, as MNOs are more accustomed to partnerships with proven start-ups in more established sectors, such as FinTech, and in more mature markets.

- **Persuading public sector partners:** Convincing local regulatory and governmental bodies to contribute resources often requires a shift in mindset. Before adopting new technologies, public sector bodies need to overcome resistance to change and a lack of digital sophistication.

> I work under the sun. If there were electricity, there will be a fan and a fridge. After work, I can get a glass of cold water with my kids. After coming back from hard sun, I can turn on the fan and be peaceful.”

**Mokshed Pramanik**, Farmer

### Ecosystem enablers and barriers for portfolio start-ups, by sector

<table>
<thead>
<tr>
<th>Sector</th>
<th>AgriTech</th>
<th>ClimateTech</th>
<th>FinTech</th>
<th>EdTech</th>
<th>HealthTech</th>
<th>Utilities</th>
</tr>
</thead>
</table>
| **ENABLERS** | • Increasing stakeholder participation in digital solutions across the value chain, including farmers  
  • Strong growth in investment interest  
  • Rise of homegrown start-ups in key markets (e.g., Kenya, Ghana)  
  • Supported by strong digital and mobile payments, enabling the growth of AgriTech digital marketplaces  
  • Ample opportunities for start-up solutions to fill critical market gaps | • Rising demand for digital solutions across key markets, including increased consumer awareness and adoption in countries  
  • More ESG-related funds and climate-focused start-up funds and launchpads  
  • Greater application of data and digital solutions for addressing climate-related challenges | • FinTech continues to dominate  
  • Continued growth due to greater mobile and internet penetration  
  • Greater adoption of mobile payments and financial and banking services  
  • Often serves as integrated, facilitating technology for other solutions in AgriTech, EdTech and digital utilities due to payment requirements  
  • Rise in FinTech scale-ups and corresponding M&A activity | • COVID-19 accelerated demand and acceptance of e-learning and virtual education solutions  
  • Significant jump in investor interest across sub-segments  
  • EdTech is no longer a niche investor category  
  • Demand has grown from schools to broader opportunities in skill-building and training in the workforce | • COVID-19 increased demand for telehealth solutions  
  • Overall push towards efficient digital healthcare solutions and growing consumer demand for HealthTech integrated in everyday technology (e.g., wearables and at-home diagnostics)  
  • Ageing populations | • Growing connectivity and data coverage in previously underserved markets  
  • Growth of PAYG solutions with wider consumer adoption  
  • Greater push towards digitisation among forward-thinking public sector authorities in certain markets (e.g., India’s nationwide Swachh Bharat campaign) |
| **BARRIERS** | • Landscape more conducive to digital start-ups scaling faster than hardware AgriTech start-ups  
  • Different policies and payment infrastructure create barriers and delays  
  • Widespread adoption and awareness still an issue  
  • Underdeveloped local investor base leads to higher risk perception among foreign investors  
  • Infrastructure and policy barriers create disincentives and increase risk  
  • Africa has only 0.2% of global Climate-Tech investment deals | • Disparate regulatory policies and compliance requirements across 54 countries in Africa  
  • Significant potential for digital currencies to disrupt existing conventional FinTech solutions and services | • Return to school and in-person learning may slow the growth seen during the COVID-19 pandemic  
  • Cost of data in certain markets  
  • Regulatory issues, such as banning private for-profit online tutoring in China  
  • Differing consumer mindsets around e-learning inhibit fast expansion in various African markets  
  • Expensive FinTech talent | • Hardware HealthTech start-ups face COVID-19 challenges, such as supply chain disruptions and labour shortages, as well as price increases of hardware components  
  • Greater upfront capital requirements face higher cost of borrowing | | • Lack of comparative investor interest  
  • Scaling challenges due to external factors, such as infrastructure and regulatory challenges, especially with hardware start-ups  
  • Partnership challenges with public sector agencies in certain under-resourced markets (e.g., Mali) |

Source: Team synthesis and analysis from desk research, validated by interviews
— **Building the ecosystem:** Connecting existing, fragmented and isolated market players in a community to build a collaborative ecosystem requires significant time and effort. This is especially true in markets where entrenched local players view new market entrants as competition rather than potential partners.

Many of the barriers for first movers relate to perceptions of viability and risk as an unproven start-up. This underscores the need to support seed and early-stage start-ups in establishing credibility, industry authority and social proof. These challenges are also opportunities for first movers to establish themselves as a preferred provider in the community, given their advantage in understanding local needs, honing product-market fit and overcoming initial hurdles.

**COVID-19 intensified differences between start-up sectors, markets and solutions**

The impact of the COVID-19 pandemic has been mixed, with the transition to digital solutions contributing to accelerated growth in digital health and education while significantly threatening the growth outlook for hardware dependent start-ups that must navigate the additional challenges of inflation and supply chain disruptions.

— **COVID-19 has significantly accelerated the growth of digital business models that provide a platform for remote services,** such as Sehat Kahani’s telehealth solution and Eneza Education’s virtual learning services.

— **COVID-19 created greater challenges for start-ups with hardware components** and service delivery requiring in-person fulfilment. Certain geographies have also been significantly more impacted by local or regional lockdowns and health challenges, leading to employee churn and loss of customers.

— **Markets with lower digital penetration rates experienced more disruptions to collaboration and service provision.** This especially affected start-ups that were dependent on public-sector communication, as personnel who were essential for the start-up to perform operations were absent for long periods. Many government departments also had difficulty transitioning to remote work, which contributed to delays.

The COVID-19 pandemic had generally **adverse effects on fundraising,** as investors were hesitant to invest in riskier early-stage start-ups. However, several portfolio start-ups whose solutions contributed to the COVID-19 response were able to grow as a result:

— Sehat Kahani partnered with the Pakistan government, which leveraged Sehat Kahani’s e-health platform for COVID-19 messaging, resulting in business growth both in terms of customers and revenue.

— oDoc expanded the reach of their e-health service, not only in Sri Lanka (with an additional MNO partnership) but also in the Maldives. The relevance of their business model helped them raise additional funds in early 2021.

— Qlue’s performance was propelled to success through a partnership with government for COVID-19 reporting.

### 3.2 Catalytic funding unlocks further investment

Despite the challenging context in which these start-ups operate, the GSMA’s catalytic grants helped to kickstart their fundraising journeys (see Figure 6).

**Insights from raising additional funding**

These insights are specific to the portfolio start-ups featured in this report.

1. **EdTech and AgriTech are top performers.** EdTech (Ruangguru) and AgriTech start-ups (Twiga Foods and eFishery) raised the most follow-on funding, cementing their status as market leaders. Cumulatively, AgriTech start-ups in the GSMA portfolio have raised more than $280 million and accounted for three of the top five funding amounts. This reflects the market demand and potential impact of the digitisation of the supply chain to empower smallholder consumers in primary industries, such as agriculture. Meanwhile, the funding raised by EdTech portfolio start-ups is heavily skewed by Ruangguru’s large deals, but EdTech solutions like Eneza Education are scaling into new markets.

2. **Established ecosystems like Indonesia and Kenya attracted the most follow-on funding.** Indonesian and Kenyan start-ups represent four of the five top performers in this study. This
Follow-on funding raised by GSMA portfolio start-ups, by sector and country

- **UDUMA**

corresponds with the continued growth and overall economic outlook, the acceleration of the start-up ecosystem and enabling business environments for start-up investors in both countries. Kenya and Indonesia also share similar characteristics in terms of high rates of digital penetration, consumer technology adoption, mobile payments and a critical mass of tech talent.

3. **Female ownership of start-ups mirrors global sectoral trends.** Data on start-ups founded by women mirrors the global trends highlighted in Section 1.4, with female-founded companies having higher representation in EdTech and HealthTech. It is worth mentioning that in male-dominated sectors like energy, water and sanitation, Lumos in Côte d’Ivoire has a female CEO. It is also noteworthy that female-founded companies Sehat Kahani in Pakistan and Kea Medicals in Benin operate in countries where start-up ecosystems are nascent, women are underrepresented in start-ups and investor landscapes are less mature than those in neighbouring countries.

Several early investors participated in subsequent funding rounds. Examples of repeat investors for the top-three funded start-ups include East Ventures (Ruangguru), 1776 Ventures (Twiga Foods) and Wavemaker Partners (eFishery). Although they began with only one or two early-stage investors, all three companies secured more investors in each successive round. This highlights the importance of finding the right investors early on and regarding those initial investors as long-term partners that can connect start-ups with their business networks. Securing investment from reputable investors can also give future investors more confidence in a start-up’s business model and potential to scale.

**Insights on the types of funding and funders for the 21 start-ups:**

1. The **US was the leading investor** in the 21 portfolio start-ups in terms of number of deals, reflecting broader tech start-up investment trends in Africa and Southeast Asia. US investors helped African start-ups set a record year in 2021, with VC and corporate investments accounting for most funding opportunities. VC firm Sequoia Capital (with presence in the US, India and Southeast Asia) is optimistic about the long-term prospects of start-ups in Southeast Asia. This confidence is reflected in the GSMA portfolio, as Sequoia invested in eFishery’s Series C round.

2. It is noteworthy that the start-ups that received the most VC funding are alumni of the Google Launchpad Accelerator. Portfolio start-ups that went through an accelerator programme were more successful at attracting VC funding.

3. **Tech start-up accelerators play a crucial role in the ecosystems of LMICs and serve various purposes:** to support and build local entrepreneurial capacity, strengthen start-up networks, encourage capital investments and facilitate market connections. Google Launchpad Accelerator, which provides access to Google’s people, network and advanced technologies, provided grants to Ruangguru, Twiga Foods and Qlue. Spring Accelerator, which offered nine months of technical expertise to start-ups in East Africa and South Asia, supported DrinkWell and Ensibuuko.

**Before using Ruangguru, I was very much lacking in lessons. But after subscribing to Ruangguru, I can better understand the material being taught.”**

Faturrahman Pelajar, Student

**Investors included global names in VC for Series A investments and above, such as 500 Start-ups, TechStars, SoftBank and Sequoia Capital (India), as well as recognised impact funds, including Acumen, SeedStars and Mastercard Foundation and corporate VC arms (CVCs), such as UOB Venture Management and Google Launchpad Accelerator. The funding data shows that high-profile VCs and CVCs prefer investing in fast-growing sectors and more advanced markets, compared to less popular sectors in under-resourced countries.**

---

15. Tong, G.C. (16 June 2022). “Sequoia says it is optimistic about Southeast Asia’s start-ups despite challenging market”. CNBC.
Village Capital, which runs accelerator programmes for impact start-ups (such as investor readiness), supported DrinkWell, Ensibuuko and Eneza Education. All this highlights the importance of effective incubation in the early stages of a start-up’s scaling journey, as well as identifying the right type of investor early in the fundraising journey, especially those that offer more than just monetary support.

4. **Start-ups in sectors that take longer to scale, such as energy, water and sanitation, relied more heavily on development agency funding** and programmes more focused on impact, such as MassChallenge and Village Capital. This is where impact investors and development finance institutions (DFIs) such as the International Finance Corporation (IFC) and British International Investment (BII) can play a pivotal role in supporting the development of innovative solutions in sectors that do not easily attract VC funding. For example, BII invested in GSMA portfolio start-ups M-Kopa, PEG and Lumos, supporting the growth of innovative energy solutions in underserved African markets.

5. Not all start-ups chose to pursue traditional equity funding, and instead looked for alternative sources of seed capital. For example, most of
DrinkWell’s funding came from a variety of non-equity grants and innovation challenges. Lumkani and Gham Power received prize and award money while Vitalite obtained funding through crowdfunding. It is worth mentioning that Vitalite and Gham Power operate in under-resourced start-up markets – Zambia and Nepal, respectively – where scarce funding compels start-ups to rely on alternative funding mechanisms. Furthermore, in markets with less mature investors, a significant amount of seed to early-stage funding came from individual angel investors rather than investment firms or established accelerators. One example is the Sri Lankan HealthTech start-up oDoc. This demonstrates the importance of investigating various types of funding, especially donor funding in markets with smaller investment ecosystems.

6. **Debt financing emerged as a popular option for AgriTech start-ups.** Four of the top five funded companies (Twiga Foods, eFishery, Lumos, SunCulture) received debt financing, while capital-intensive utilities start-up Lumos received debt financing in 2015 and continued to raise more as they grew. In comparison, digital AgriTech platforms Twiga Foods and eFishery received debt financing at later stages, in addition to funding in Series B and C rounds from new and existing investors. At this stage, start-ups can also access traditional financing that is often unavailable earlier on.

7. As with Lumos, water and energy start-ups also pursued debt financing given the higher upfront capital requirements for hardware and infrastructure-related solutions. Because loans were larger, debt financers for utility start-ups were primarily government or multilateral development agencies, including US Overseas Private Investment Corporation (OPIC), the US International Development Finance Corporation (DFC), and the World Bank. At an earlier stage, Kiva (an online microlending platform) was a smaller scale debt funder for DrinkWell.

8. The popularity of VC arms of development agencies is evident. It is worth noting that certain multilateral debt financers, such as the IFC, also participate in traditional VC funding via their venture arm, such as IFC Venture Capital Group and ADB Ventures. Global banks also provide Series A and follow-on funding through their VC arms, including Goldman Sachs Venture Capital and UOB Venture Management.

9. **Corporate social responsibility (CSR) and foundation funding** remain important funding sources in early stages, both through grants and seed rounds. Examples include the Mastercard Foundation, Rabo Foundation and Shell Foundation. There are fewer criteria for awards and grants compared to the financial growth requirements of later-stage funders, making it a more viable option for start-ups in more nascent sectors and markets.

10. It is noteworthy that **MNOs took part in VC rounds.** Kenyan MNO Safaricom was both a VC funder and provided conventional strategic start-up-corporate partnerships, having provided Series A funding to Eneza Education in
Scaling Digital Innovation in Emerging Economies

3.3 Case studies

The following case studies highlight the importance of partnerships in closing the gender finance gap and the best practices of GSMA portfolio start-ups that have built scalable business models.

Twiga Foods: Best practices in business model scalability

Having raised more than $150 million in funding since its founding in 2013, Twiga’s capacity to grow and operate at scale has attracted both VC and institutional investors. To date, Twiga has reached more than 100,000 customers in Kenya and plans to expand across Africa. To better understand Twiga’s success, Figure 8 evaluates the company against five best practices of business model scalability identified by the MIT Sloan School of Management.

Figure 8

Five best practices in business model scalability applied by Twiga Foods

1. Operate with multiple distribution channels
   - In addition to their own B2B platform, Twiga has diversified distribution to cover informal retail and other e-commerce channels.
   - Partnered with e-commerce retailer Jumia to offer a Twiga Fresh Bundle on Jumia’s consumer-facing platform at half the price of other retailers.
   - Plans to roll out low-cost manufactured food and non-food products under their brand.

2. Eliminate typical capacity limitations
   - Addresses key agricultural supply chain capacity limitations, starting with access to data.
   - Improves access to reliable market data critical for supply chain planning and optimisation through their Sokolytics Product, leveraging data analytics to help their customers understand critical factors driving decisions.

3. Outsource capital investments to partners
   - In addition to venture funding, Twiga has partnered with financial institutions to offer their vendors and farmers access to credit products through third-party providers. This reduces Twiga’s risk while expanding service capacity and providing additional data points to enhance their artificial intelligence (AI) analytics.

4. Allow customers and partners to assume multiple roles in the business
   - With multiple products addressing various pain points along the agricultural value chain, Twiga can engage their platform users in different roles, including working capital financing, marketplace buying and selling, data providers, etc.
   - Development funding partners can also help deploy Twiga products across their user base.

5. Create platform models
   - Unifies the fragmented agricultural industry by simplifying the supply chain between fresh food producers, FMCG manufacturers and retailers through a B2B e-commerce platform.
   - Eliminates the need for many intermediaries, significantly lowering food costs for consumers.

Source: Analysis of five factors adapted from the framework, Building Scalable Business Models, MIT Sloan Management Review
This model was developed based on the experiences of international companies such as Google, Apple and Groupon, as well as a five-year study of 90 Scandinavian companies. When measured against this global benchmark, the strength of Twiga’s business model is evident.

**Sehat Kahani: Success reduces gender bias**

Sehat Kahani, a telehealth platform led by two women co-founders, serves female customers and recruits female doctors to provide service delivery. The HealthTech start-up is addressing a critical gap in Pakistan’s healthcare market where demand for doctors outpaces supply, especially in rural areas, while many women doctors leave the workplace after starting a family. The founders saw an opportunity to tap into the potential of these doctors. Using the power of mobile technology, Sehat Kahani gives women doctors the opportunity to work from their home and connect with patients who need healthcare.

Sehat Kahani received significant support from the GSMA to develop an early partnership with MNO Jazz Pakistan. The founders have stated that this strategic partnership with a reputable MNO provided the credibility and traction to attract additional funding and key partnerships, including with the public sector. Once Sehat Kahani showed measurable success, they did not experience any discernible gender bias in their operations or fundraising as their results and record stood on their own. They felt more confident as the company grew, applying the lessons, experience and knowledge they gained along the way. Figure 9 summarises the gender impact of Sehat Kahani after receiving GSMA grant funding.

---

Sehat Kahani’s gender impact

With GSMA funding
- Launched six e-health centres, two in each province
- Created an e-health mobile app providing access to physicians
- Developed 20 e-health courses in both Urdu and English
- 800,000+ beneficiaries reached via health education awareness campaigns

“Empowered Women, Empower Women”
- As a company started by two women, Sehat Kahani recognises the power of their platform to empower both providers and female users
- Hiring all-female doctor consultants
- Majority women patients and platform users
- Partnerships drive credibility and lessen gender bias due to a track record of growth and market proof
- The confidence of founders grew as they learned to run their business more effectively and attract more opportunities

MNO partnership via GSMA
- GSMA was instrumental in helping Sehat Kahani establish their first big brand partnership, including making introductions and facilitating many series of meetings. As a result, Sehat Kahani became the first HealthTech company in Pakistan to sign an MOU with MNO Jazz.
- This attracted attention from other investors, the Ministry of Information Technology and Telecommunication and other partners, setting the company on a growth trajectory

Impact to date
- 35+ e-health clinics
- 360,000+ patients treated via video consultation
- 3.2 million+ beneficiaries reached via health education awareness campaigns
- Team of 250, including HQ and community staff
- 5,000+ female doctor provider network
- 35 health education drives

I joined Sehat Kahani as a volunteer during the pandemic, later on joining the team as consultant cardiologist, educator and advisory. It’s a great platform for the doctors to reach out to their patients from the comfort of the home and office, and for the patients to seek valuable advice, sitting at home especially with the pandemic situation.”

Testimonial from female doctor on Sehat Kahani’s platform

4 Recommendations for key stakeholders
The following recommendations for key stakeholders are synthesised from interviews and observations, including lessons learned by the start-ups themselves. These recommendations can be used as guidelines to support start-ups with their fundraising journeys, as well as those looking to invest in impactful and scalable solutions in LMICs, and those organisations offering them support.

4.1 Start-ups

Be strategic in identifying the right investors and partners

— Seek out investors committed to diversity and inclusion

— Ensure your goals, values and ROI are aligned with the investor

— Identify investors that understand the unique dynamics of your sector and country/region

— Be able to demonstrate expected returns to investors based on their criteria

Find a champion to promote start-ups in their networks

— A champion could be a start-up advisor, investor or customer

— Champions can help start-ups develop partnerships, secure new business and promote their product to customers. They can also help bring in funding and expand your network

Diversify revenue streams and manage risk

— Diversify revenue streams along your value chain by creating value for all relevant stakeholders

— Develop a solid working knowledge of financials and continue to understand the needs of your core customer base

— Find opportunities to share risk among partners

Foster strong communication with investors

— Develop your public speaking skills and find opportunities to speak at industry conferences and events attended by potential funders and investors

— Learn how to better articulate and customise your start-up’s value proposition to the investor audience. For example, what specific commercial benefit or value do you offer that would incentivise the MNO to partner with you? What change are you creating in the world and why should investors join you on your journey?

— Be patient with fundraising. As one portfolio start-up put it, “everything takes longer and costs more than planned”

4.2 Investors and funding organisations

Increase outreach to women tech entrepreneurs

— Provide more support to build a pipeline of investor-ready companies led by women, specifically targeting accelerators and incubators that focus on women-owned and operated ventures

— Greater inclusion of female VC partners and leadership at investment firms can create more diverse investment perspectives and improve the gender balance

— Actively explore opportunities to collaborate with women-led initiatives and events in their local start-up ecosystems to identify start-ups

— Dedicate a percentage of funding to women-led start-up applicants that meet their investment criteria

Address negative bias against LMICs

— Better understand the start-up landscapes in LMICs to reduce negative bias against certain countries
Several respondents emphasised the need for investors to open their minds to investing in historically underserved markets and sectors. Investors should evaluate the merits of the start-up’s operations and growth potential, rather than judging the location of the start-up based on negative bias.

**Partner with other funding organisations to reduce funding gaps**

- Collaborating with different investors can help to scale innovative solutions in LMICs. As shown in Figure 7, there were numerous investors from North America, Europe and the UK with greater scale, highly developed networks and significant funds. These investors could partner with in-country investors who are more likely to understand the unique challenges local start-ups face.

**Support hardware start-ups**

- The donor community can play an even bigger role in supporting hardware start-ups whose solutions are not always as attractive to commercial investors. Supplying grant funding and technical assistance to hardware start-ups in the early stages can help catalyse their journey to scale and manage supply chain challenges.

**4.3 Accelerators and tech hubs**

While the development of start-up ecosystems can vary depending on the level of market maturity, the following general recommendations can be adapted and contextualised to the needs of an ecosystem.

- It is crucial that tech hubs **find a sustainable business model** so that they can continue to support start-ups. Across ecosystems, accelerators have run into financial difficulty due to the time it takes for invested ventures to generate a return. Other sources of funding, such as support from a large corporation or donor, will likely be required to run a sustainable accelerator programme.

- Start-up hubs should **leverage their community to combine member volumes and partner** with organisations such as Amazon (AWS), Microsoft and others to provide community-wide discounts for start-ups in the local market.

- Tech hubs must **create consistent community-wide programming**, such as events and seminars, to create connections, generate leads and build trust among different stakeholder groups. Hubs should organise dedicated business development meetings for start-ups to share leads, find resources and exchange referrals. For instance, traditional demo days might not be appropriate for nascent ecosystems, which typically have limited early-stage venture capital. Tech start-ups in these ecosystems could benefit more from mentoring, networking and skills training.

- Tech hubs should **foster a community-wide sense of collaboration** rather than competition. Support workshops on systems and design thinking, futures-building and social innovation will encourage collaborative problem-solving and dynamic exchange of ideas between sectors.
