Redefining enterprise services:
Anytime, Anywhere

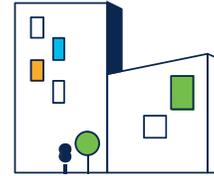

Redefining Enterprise Services: Anytime, Anywhere

Bob Everson, Senior Director, Provider Mobility, Cisco Networking

February 28, 2024

What does the enterprise want? **Digital Transformation**

simple, secure, and ubiquitous.

New era, **new requirements**

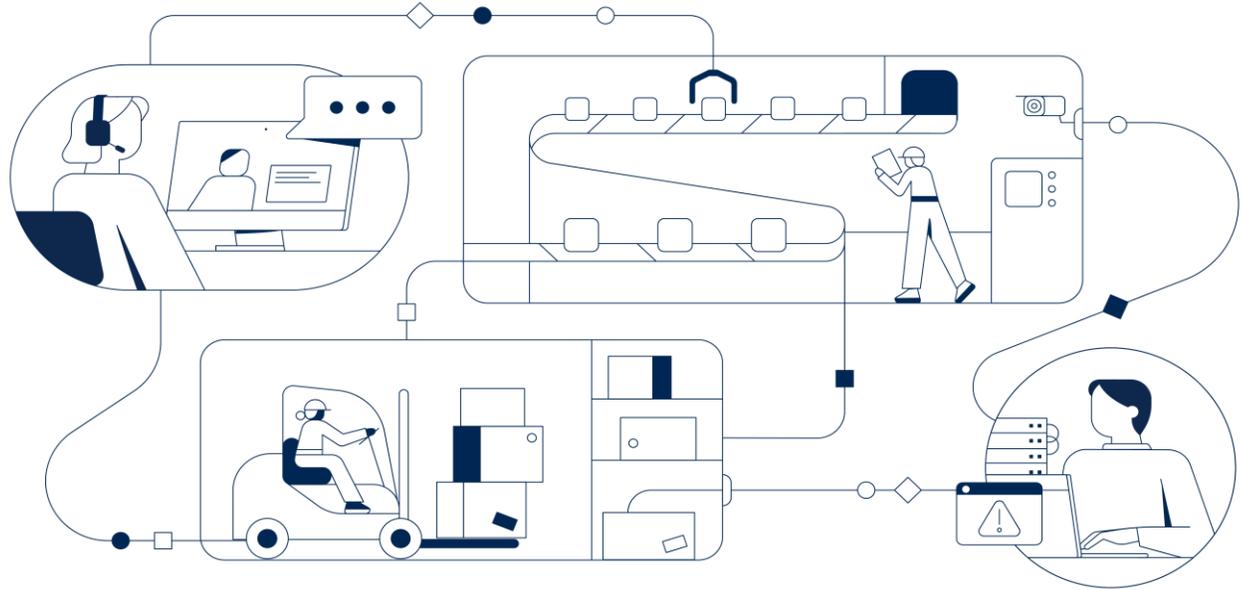

connecting people, places, and things

Enterprise orientation required

1

Leveraging what has been done in the past, to take you into the future

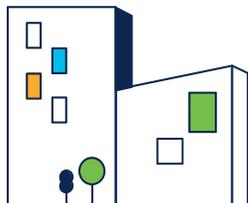

2

Clearing the path for enterprise and industry to seamlessly integrate technologies with a future-forward ecosystem

3

Secure and reliable; bringing carrier grade services to enterprise applications

Enterprise **lessons learned**

Ecosystem Harmony

- Everything working together
- Trusted partnerships
- Open innovation
- APIs

Common Platform

- Simplify the complex
- Common identity and policy
- Maintain network hygiene
- Access agnostic mobility

Observability & Control

- Turn insight into action
- Enterprise remains in the driver seat
- Manage new challenges their way

**Digital
transformation**
success is intimately
tied to simplicity

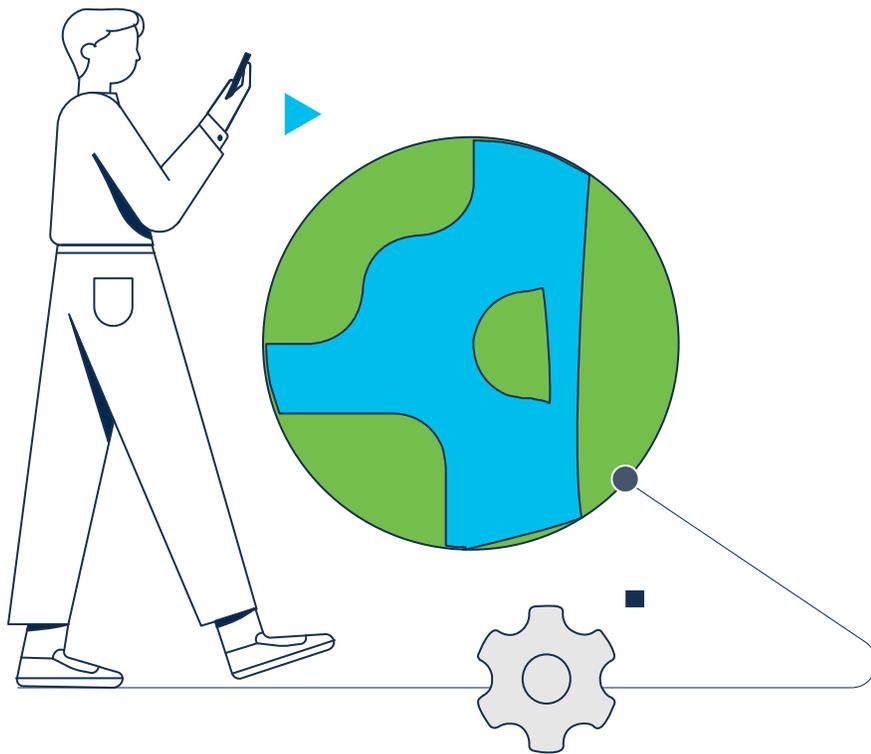

Make it easy

and get all the customers
who can see the value to
their business

Keep it difficult

and search for the few
customers that must
have it

Delighting the customer

- Connect needs to technology and applications
- Benefit the bottom line
- It's time for the Internet of useful things

The bridge to possible

TIM

Telco Edge is becoming a reality with private and public initiatives

Asia-Pacific

Bridge Alliance, composed of more than 20 operators in the region, launched the **Federated Edge Hub** in 2023, after an initial phase testing edge use cases and edge federation mechanisms

European Union

EU Public Policy actions

- Digital Decade
- Data Strategy
- Green Deal
- 2030 Digital Compass
- Edge Observatory

Targets 2030
10.000 Edge nodes
75% SMEs on cloud, data, AI

Creation of some supporting **bodies**

IPCEI-CIS* project to develop the next generation Cloud Infrastructure and Services (launch dec 2023)

Edge Federation @IPCEI-CIS

Europe is making strong efforts to gain relevance in Edge and Cloud

The IPCEI-CIS initiative integrates different projects with more than 100 partners from 12 EU member states

In this framework, DT, TEF and TIM have launched 3 coordinated projects to deliver an open multi-provider Telco Edge

Workstream 1 Cloud-Edge Continuum Infrastructure	Workstream 2 Cloud-Edge Capabilities	Workstream 3 Advanced smart data processing tools and services	Workstream 4 Advanced Applications
Deutsche Telekom	Atos	4iG	Siemens
Telefónica España	Orange	E-Group ICT Software	Fincantieri
	SAP	Tiscali Italia	Engineering Ingegneria Informatica
	Reply	CloudFerro	
	TIM		
	Oktawave		
	Atende Industries		
	OpenNebula Systems		
	Arsys Internet		
	Leaseweb Global		

Telco Edge approach

Mobility embedded

Open, Interoperable

Federated, multiprovider

Secure

Sustainable

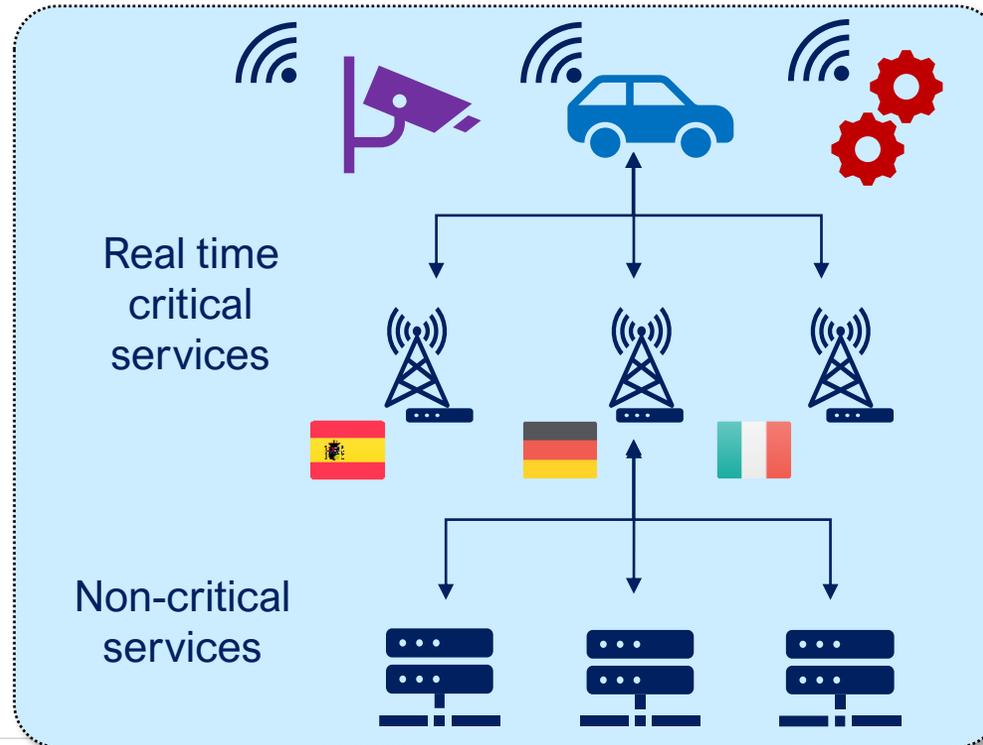

The IPCEI CIS Project (Next Gen Cloud Infrastructure and Services)

IPCEIs are large projects of **European interest** for which the EC authorizes Member States to **provide state aid in support of private investments for research development**, innovation and Pre-Industrialization.

It delivers **breakthrough innovations** to enable an industrial production of new technologies and products.

Innovative Cloud and Edge continuum from Data centers to far edge locations to enable the most critical services of the future

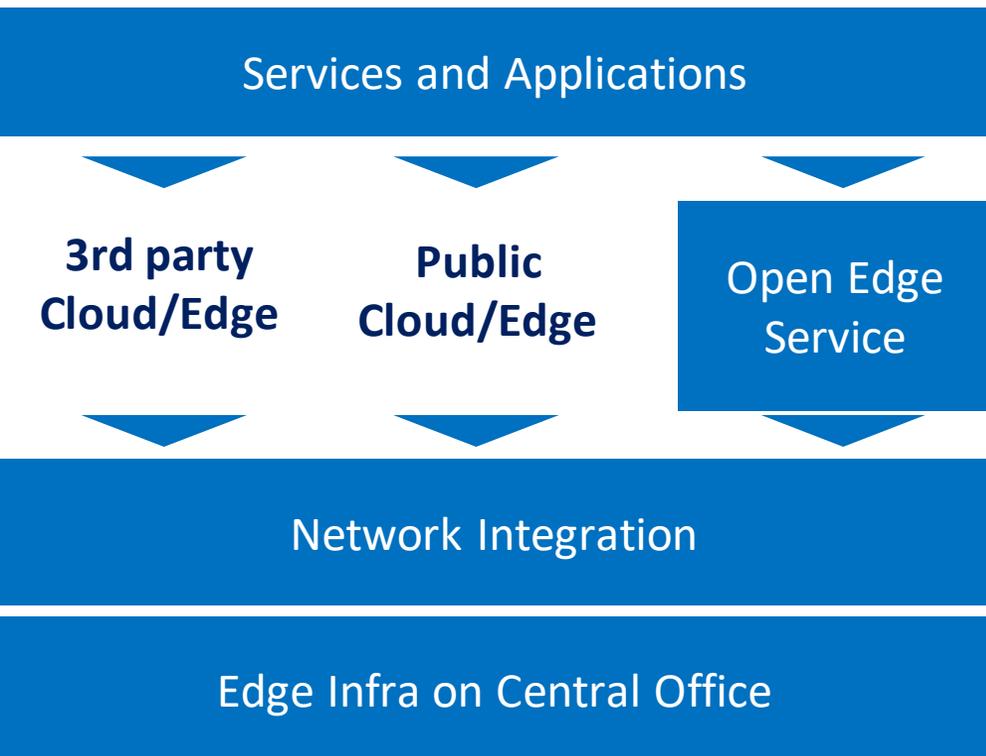

...with major European benefits

- ✓ Sovereignty for users
- ✓ Open continuum for customers and providers
- ✓ No vendor lock-in
- ✓ Highly secure
- ✓ Interoperable across borders and providers
- ✓ Key sustainability features

The Telco Edge project inside the IPCEI-CIS

Telcos create an Edge platform leveraging their existing infrastructure in Europe.

Open to Third Parties, to mobility, to developers, and to other cloud platforms.

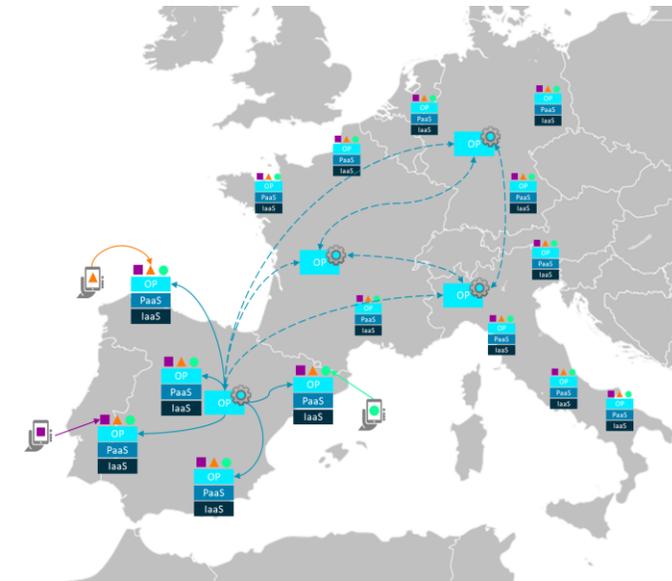

Use Cases for different verticals, check value, fine-tune service

Open platform technology for smart resource and application life cycle management

Integrate **5G** and **FTTH** capabilities optimally with the edge.

Technical capabilities to efficiently scale Near and Far Edge Compute

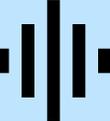

Each operator addresses the project layers with different level of intensity and type of contributions

	Telefónica	Telecom Italia	TIM
Applications	Edge use cases in different verticals	Edge use cases in different verticals e.g. autonomous logistics as a Service or autonomous mobile devices	Edge use cases in urban mobility, cultural heritage and e-health verticals
Open Edge Service	R&D and deployment of innovative edge exposure, orchestration and federation	Orchestration & Federation Layer Edge developer framework	New Edge Cloud infrastructure in a federated and orchestrated environment
Network integration	Network Integration blueprints to improve quality and performance	Develop fully interoperable open solution (cross-border/-operator)	Edge Cloud integrated with capabilities exposed by Telco network
Edge infra	Near Edge infrastructure blueprints scalable, operable, sustainable, secure	Sustainable and secure near and far Edge Infra set in GER incl. scalable blueprints	Near Edge and Far Edge infrastructure blueprints

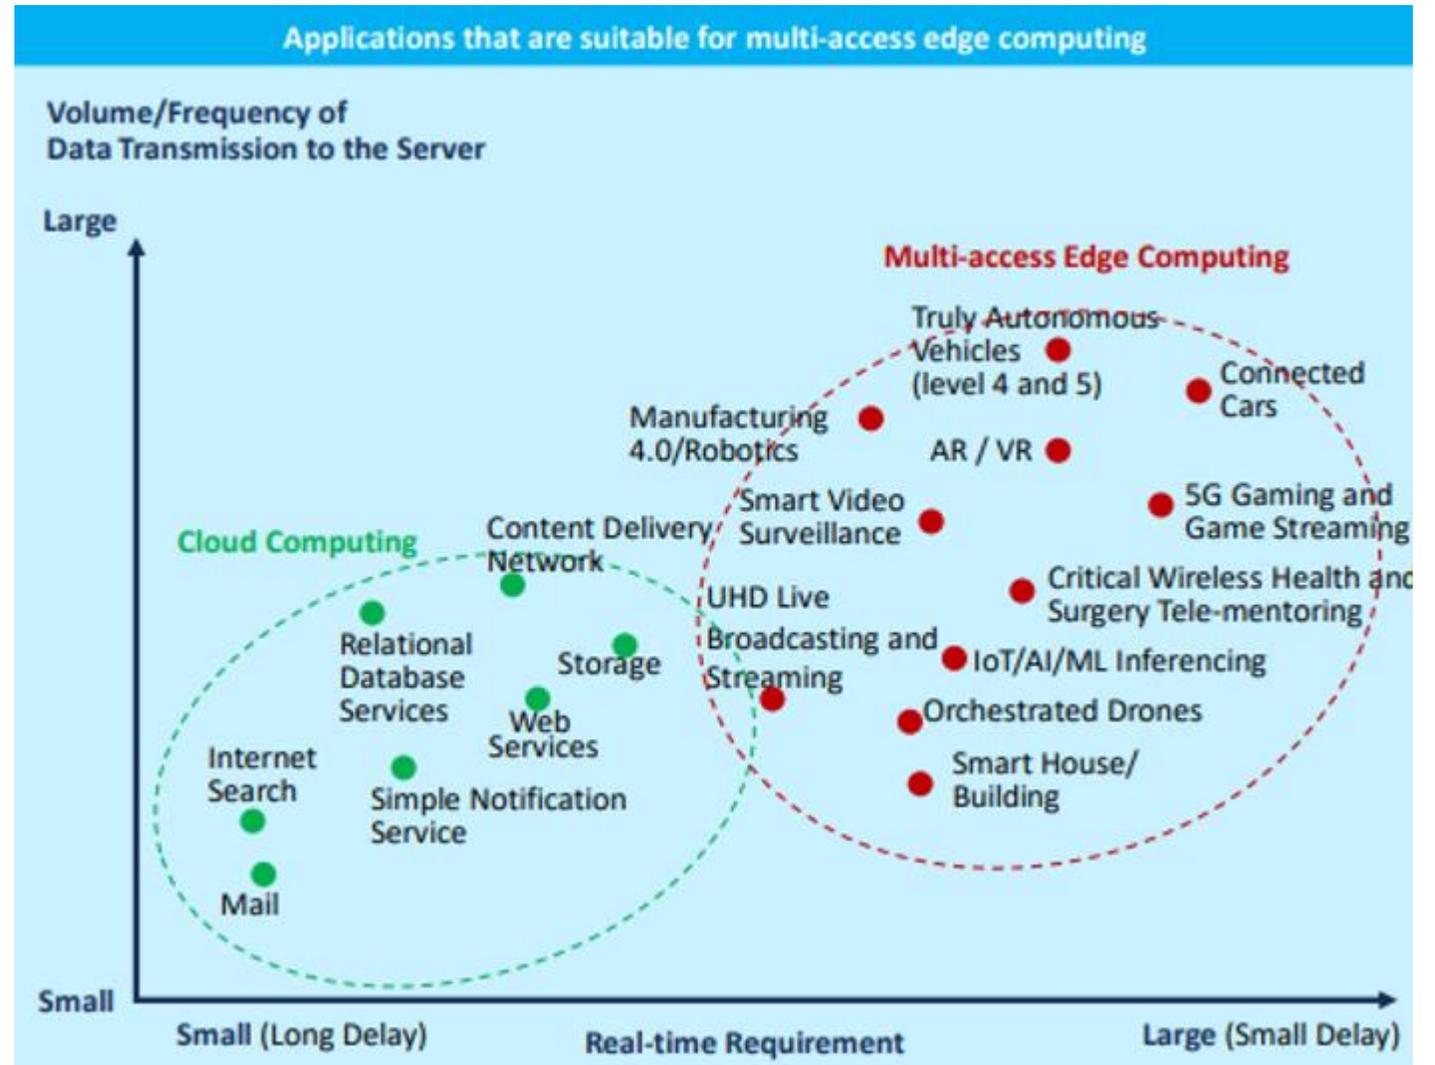

Collaboration spans several topics

Applications	Design, develop, test, implement Edge Service APIs Use cases across the combined footprint Service agreements: business and regulatory aspects	  
Open Edge Service	Design, implement open source Edge Federation mechanisms Design, implement other open source Edge advanced features Test, implement Open Telco Cloud Stack	  
Network integration	Blueprints for Network integration (transport, core) Interconnection and roaming to optimize Edge experience	  
Edge infra	Blueprints for green, secure, innovative Near Edge infrastructure (racking, power, cooling, hardware, security...)	  

Use cases show the Telco Edge value

Telco Edge enables new use cases that bring opportunities to all stakeholders
